* Where a "type to be replaced" carries a multiple designation incorporating a 5500-series number, that type can be directly replaced by the RCA type having the same 5500-series number. For example: the 5557/FG-17, as well as the FG-17, is directly replaceable by the RCA-5557. Likewise, the 5552/651/656, as well as the WL-651/656, is directly replaceable by the RCA-5552.

ELECTRONIC AND RADIO TUBES

SUBMINIATURE TUBES

Here they are—and here's why more Raytheon Subminiature Tubes are on the job than *all other makes combined*—five million of them for commercial applications.

**1. REDUCED PRODUCT SIZE . . .
INCREASED PRODUCT SALABILITY.**
Raytheon filamentary Subminiatures are *flat.* Batteries can be little instead of big because of extremely low filament drain.

2. PLUG INTO STANDARD SOCKETS.
All Raytheon Subminiatures can either be soldered in or plugged into sockets available from a number of manufacturers.

3. AS RELIABLE AS A FINE WATCH.
The result of Raytheon's unique precision assembly methods backed by eight years' continuous production of long-life Subminiature Tubes.

4. READILY AVAILABLE FROM STOCK.
Over half a million of the Tubes described below are on tap at all times. They are standard throughout the world.

5. AT YOUR LOCAL DISTRIBUTOR.
Over three hundred Raytheon Special Purpose Tube Distributors stand ready to serve you quickly and intelligently.

** Max. C.C.S. ratings in Class C oscillator service.

★ Two filament strands in series with large post at neutral junction; operate in series at 22 volts or two phase with 11 volts per strand.

★★ This rating applies only with forced air cooling.

° Per unit, heater can be arranged to operate from either a 6.3 or 12.6 volt supply.

‡ Six filament strands connected from each post to floating neutral. See individual data sheets for connections.

† Three filament terminals Y-connected in 3 phase.

‖ Three filament terminals Y-connected in 3 phase with neutral center terminal.

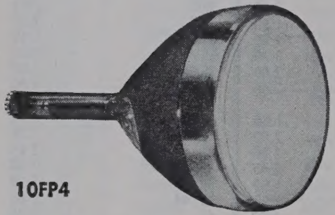
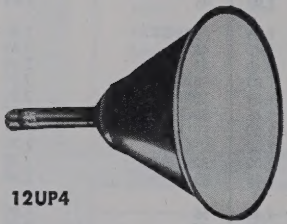
RAULAND *Television* PICTURE TUBES

PROVEN DEPENDABILITY · SUPERIOR PERFORMANCE

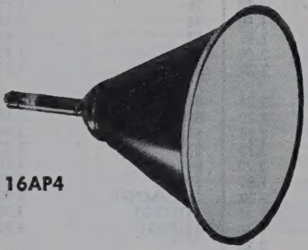
Rauland, a pioneer name in television, identifies a top source of supply for better television picture tubes. The incomparable aluminized "brighter picture" (another Rauland "first") and metal-glass direct view tubes embody the latest advanced engineering practices . . . achieving "Perfection through Research."



10FP4



12UP4



16AP4

10FP4

Direct view picture tube incorporating new "bright light" aluminized reflector screen. Provides up to 80% brighter picture when used as replacement for 10BP4. No ion magnet required or circuit changes necessary.

12KP4

Similar to 10FP4 except 12½" diameter. Incorporates aluminized reflector screen. Direct replacement for 12LP4. No ion magnet used or circuit changes necessary.

12UP4

12" metal-glass type used as standard equipment in many receivers. Available with conventional screen or new "Luxide Screen" for improved contrast ratio and definition.

16AP4 & 16EP4

16" metal-glass tubes used in many direct view receivers. 16AP4 has deflection angle of 53°, overall length 22¼"—16EP4 overall length 19⅝", deflection angle 60°. Both types available with new "Luxide Screen" for improved contrast ratio and definition.

the new

Luxide Screen

The Luxide Screen is another first by Rauland. Luxide provides greatly increased contrast ratio and improved definition over conventional screen direct view tubes. With the Luxide Screen, the ambient light traveling to the screen is reduced by the absorption percentage of the Luxide Screen and the reduced ambient light reflected back to the viewer from the screen is reduced by the same percentage as it passes through the screen a second time. Contrast ratio is improved over 50% by reason of the cancellation effect. The Luxide Screen also contributes to absence of halation and improved definition.

Luxide Screens Available on 12LP4 - 12UP4 - 16AP4 - 16EP4.

CETRON ELECTRONIC TUBES

Engineered and Manufactured by Continental Electric Co.

CETRON PHOTOTUBES

CETRON phototubes are either of the gas-filled or of the vacuum type. With the gas-filled type, greater effective response is obtained, particularly in low impedance circuits, while the vacuum type is recommended where maximum stability is desired.

CETRON phototubes are selected as to their sensitivity and priced accordingly. Phototubes of the Super Class A/B are generally used for experimental purpose where very high sensitivities are required; Class C mostly for motion picture equipment; Class D for relay work, etc.

CETRON BLUE SENSITIVE TUBES

CETRON blue sensitive tubes comprise the most complete line of phototubes designed for sound reproduction work from dye recorded film.

Continental Electric also manufactures a complete line of special purpose phototubes such as: CE-5, CE-7, CE-8, CE-10, CE-15, CE-18, CE-20, CE-26, etc. We will be happy to work with you on design and development problems. Full data, prices, etc., will be forthcoming upon request.

GAS-FILLED PHOTOTUBES

The rated sensitivity for Super Class A/B is 200 microamperes per lumen and up (average 300); Class C, 125-200 microamperes per lumen (average 160); Class D, 75-125 microamperes per lumen (average 100). These sensitivities are measured at recommended operation and test voltage as specified in our technical chart.

VACUUM PHOTOTUBES

The rated sensitivity for Super Class A/B is 30 microamperes per lumen and more (average 35); Class C, 22-30 microamperes per lumen (average 25); and Class D, 12-22 microamperes per lumen (average 16); all are measured at 250 Volts.

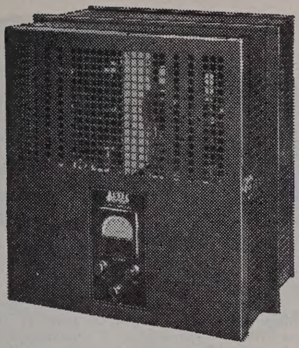
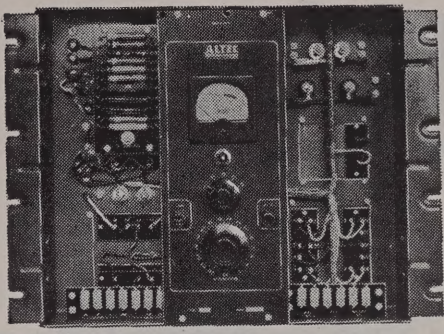
POWER AMPLIFIERS



A-287 F or W AMPLIFIER



A-256A AMPLIFIER

Altec Lansing A-127 and A-256-A amplifiers have been designed for the most exacting applications.

These amplifiers will deliver **Power** within 1 db of rating from 40 to 10,000 cycles with not more than 8% intermodulation distortion; when operated 3 db below rating their frequency response is uniform from 20 to 20,000 cycles. Thus they are particularly suited to broadcast or recording applications, where preemphasis or other equalization is used.

Input transformers have 90 db of magnetic shielding to allow operation in high magnetic fields. All components are conservatively used for long dependable service.

These amplifiers, finished in blue-gray baked enamel, are assembled on relay rack panels of recess pan construction, making them adaptable for either rack or cabinet mounting. The front panel and mat are readily removable, exposing all parts for quick servicing. A panel meter permits checking tube currents while in operation.

The 287 series amplifiers are available for use where very high audio power is required such as skating rinks, stadiums, large plants, etc.

They are of the single stage push-pull type, with self-contained power supply and in general are constructed on the same lines as other Altec rack mounted amplifiers. As they are strictly power amplifiers, they must be operated from a driver amplifier such as the A-127 series or the A-256-A.

A-425B PRE-AMPLIFIER AND MIXER

The A-425B Pre-Amplifier and Mixer is designed for high quality speech input equipment and P.A. application. It is a microphone pre-amplifier, and one pre-amplifier is required for each microphone. The output of the second stage is coupled to a 20,000-ohm mixer control which is mounted on the chassis but may be removed and mounted up to 12 inches away from the amplifier if required. The chassis may be mounted on a standard relay rack through the use of the 10629 Assembly or it may be mounted in a mixer console designed for that purpose.

The A-425C Pre-Amplifier with required equalization is available for phonograph input using a variable reluctance pickup. A crystal phonograph pickup may be connected directly into the input of the A-426 Amplifier.

A-426B LINE AMPLIFIER

The A-426B Line Amplifier is used to amplify the signal output of one to four A-425B Pre-Amplifiers. A separate input terminal is provided for each A-425B Pre-Amplifier. When less than four A-425B Pre-Amplifiers are used, the unused terminals should be strapped to ground which prevents the gain of the amplifier from changing. Interaction between controls is less than 2 db. The chassis is designed to mount with the A-425B Pre-Amplifiers either in the rack mounting assembly or in the console. An input transformer may be installed in this amplifier for low impedance input when desired.

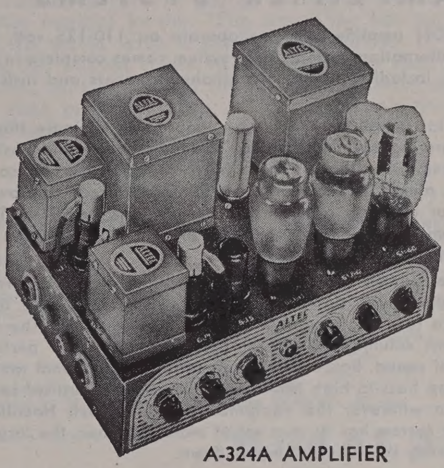
A-323B AMPLIFIER



A-324A AMPLIFIER

The A-323B is a portable conventional chassis-type general-purpose amplifier designed for high quality reproduction of sound, music, and speech from records, radio and microphone. It is engineered and manufactured to meet the high quality standards required of an amplifier when used in conjunction with Altec Lansing speakers.

The outstanding features are: (1) Full rated **Power** output within 1 db from 35 to 12,000 cycles. (2) Hum balancing potentiometer to eliminate necessity of careful selection of tubes for quiet operation. (3) Two inputs with selector switch for high and low gain. (4) Continuous variable low frequency tone control. (5) High frequency equalization through use of a stepped controlled low pass filter which gives sharp cutoff of noise frequencies yet allows full reproduction of usable high frequencies. Operation of this low pass filter is quite different from customary treble tone control and is only available generally on the most expensive amplifiers. (6) Equalization for phonograph pickup in the first amplification stage designed primarily for the new General Electric variable reluctance or Pickering pickup but which also meets the requirements of other types of reproducers for the reproduction of commercial recordings. This phonograph equalization which is not in the low gain input circuit for radio, can be removed by unsoldering a strap when a microphone is used on high gain phonograph input for P.A. work. This leaves a flat frequency response that can be varied by means of the bass and treble tone controls.

The Altec Lansing A-324A Amplifier is a portable 15-watt Public Address amplifier designed for use in high quality public address and music systems.

The outstanding features of this amplifier are: (1) **Flat** frequency response ±1 db from 20 cycles to 20,000 cycles (when tone controls are set for flat response). (2) Delivers full rated **Power** within 1 db from 35 cycles to 12,000 cycles. (3) **Two** high-gain low-impedance microphone inputs with individual volume controls on each input for mixing purposes. (4) **Two** low-gain high-impedance inputs for AM or FM tuner, crystal phonograph pickup or high impedance microphone. These two inputs have a dual "fader" type volume control which allows fading smoothly from one input to the other. (5) Bass control gives flat bass response or continuously variable bass boost of 12 db at 50 cyles. When set at "PA" position, the bass response of the low impedance microphone inputs is attenuated to eliminate "boominess" due to improper microphone technique. (6) Continuously variable treble attenuator from flat response. (7) Microphone input transformers have electrostatic shield between primary and secondary, and 90 db of magnetic shielding — eliminating hum pickup from stray magnetic fields. (8) Extra AC power socket on chassis for connecting radio tuner or record changer. (9) Pilot lamp jewel indicates when amplifier is in operation.

The Altec Model A-324A Amplifier is a professional amplifier, constructed of heavy duty parts and is designed for continuous service. Finish is grey crackle with chrome operating control panel.

HAMILTON ELECTRONICS

DS SERIES OF PORTABLE AMPLIFIER SYSTEMS

HAMILTON amplifier systems operate on 110-125 volt, 60 cycles, alternating current. Each system comes complete in all respects, including tubes, microphone, speakers and instructions.

Hamilton amplifier systems are housed in a single three-piece carrying case. Each piece fastens securely and easily. The upper halves each hold a heavy duty Jensen Alnico V speaker, plus a 25-foot cable with plug attached. The lower section of the case contains the perfect tone amplifier. The crystal microphone with shielded plug-in and 25 feet of cable rests in a special holder.

All the controls for the DS series amplifier are on the front panel, along with the toggle power switch, pilot light and protective fuse. Nothing is hidden or hard-to-get-at. The independent volume controls for both channels allow perfect mixing of sound. Bass-treble tone control permits tonal range from deep bass to high treble and allows for acoustical compensation wherever the equipment is used. Each Hamilton amplifier system has its own set of matched tubes, the larger units having the tubes clamped down.

T-31W10AX TRU-FIDELITY PHONO-AMPLIFIER

Unique in design the Thordarson 10 Watt Phono Amplifier combines versatility of application with Tru-Fidelity performance. Both microphone and phono input channels allow the 31W10AX to be used in conjunction with the High-Fidelity Meissner AM-FM Tuner and other tuners of comparable performance; as a speech amplifier in amateur transmitters; or as the amplifier section in a recording set-up. Little is left to be desired in naturalness and brilliance of tone.

Separate bass and treble controls with both boost and attenuation action assure complete adaptation of the output to all acoustical conditions, plus the pleasure of listening to music the way it is desired to be heard. Production cost is lowered by the mounting of this unit on a simple chassis inasmuch as the amplifier is usually installed in cabinet, no cover is required. LIST PRICE $127.50

Illustration of a Master-to-Master-to-Remote Inter-Mix Installation:

The above is an inter-mixed system using both Masters and Remotes.
Masters may call selectively or to all masters and remotes in the circuit. Master stations can originate calls to any remote at will.
Remotes can answer any master from a distance but cannot originate calls nor talk to other remotes. Remotes can originate calls to any master in the circuit, but cannot talk with other remotes. Model JS Remote may originate a call to only one master. Model JS-6 Remote may originate a call to as many as six masters.
Remotes with switch can be installed for private or non-private use.

Each master can have his own private hookup of remotes. The remotes may or may not originate calls to the individual master. Masters can call each other regardless of whether master being called has its power on or off.

Illustration shows less than the maximum number of units possible in installation.

A JMP-6 Master may be connected to a total of six other units and a JMP-12 Master to a total of twelve other units. These units may be other masters or the JL, JS, and JS-6 Remotes, or the MB-8N Booster Amplifier. All of these units may be mixed.

Gain: .02 Volts Input produces .8 Volts Output to Volume Control of .25 to 1 Meghom

PREAMPLIFIER

- **Accomplishes a high degree of noise reduction — maintains natural brilliance and realism — essential overtones are reproduced at all volume levels.**
- **Introduces no unnatural tonal qualities in the reproduction.**
- **Installation and operation require no technical skill.**
- **Also supplied in combination with a high-quality power amplifier for custom and commercial installations.**

***Net Price* $59.50**

The Somerset Noise Suppressor is essential if you have other high fidelity equipment. A 15,000-cycle wide range reproducing system is of little value if it must be limited to 4,000 or 5,000 cycles by treble control to avoid surface scratch or hiss.

Somerset Laboratories Incorporated has developed a new dynamic Noise Suppressor Pre-amplifier with an optimum frequency response characteristic, so controlled, that wide range quality and naturalness are preserved at all volume levels. Limitation of high frequency noise, during intervals when the varying intensity of the program is insufficient to mask the noise, is accomplished, not by a sharp frequency cutoff, but by a gradual "roll off" attenuation of all of the higher frequencies.

This method substantially retains the relative magnitudes of overtones. Likewise, the pleasing effect of complex tones, which is so dependent upon the many overtones is preserved. The hollow tonal character which may result in sharp cutoff suppressor operation is avoided.

The Somerset Supressor, with its dynamic "roll off," maintains aural balance to such extent that control of the low frequencies is neither desirable nor necessary.

The Somerset Noise Suppressor Preamplifier is equipped with power supply and includes a two-stage high *-mu* triode preamplifier with feedback, compensated for selective use — by a four-position switch — with a number of the better quality phonograph pickups as well as with FM or AM radio tuners.

A unique and highly desirable feature of the circuit arrangement is that the variable gain element, which controls the high frequency amplification, is not directly in the signal path. Distortion at high levels, commonly introduced by non-linearity in variable gain stages through which the signal passes, is not encountered in this circuit.

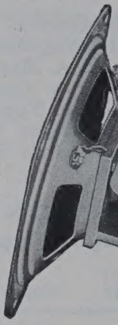
GENERAL ELECTRIC

ALNICO 5 PM LOUDSPEAKERS

All component parts of the new Alnico 5 Loudspeakers are made to the rigid specifications of G-E quality control. This feature, in addition to highly efficient manufacturing skill, combined with the "know-how" of G-E engineers, has made these new superb speakers possible — unsurpassed in fidelity, dependability and durability.

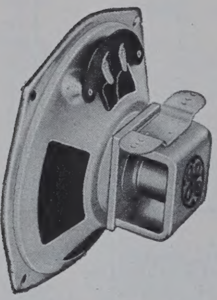


4"

GENERAL ELECTRIC'S new 4-inch speakers are the result of years of intensive engineering research to produce units of reduced size with maximum efficiency for use in small portable and table model receivers. In addition to having the "stay-bright" finish and the aluminum foil base voice coil, the new 4-inch speakers are considerably lighter in weight and more compact. This reduction in weight and space has been accomplished through the use of Alnico 5 magnet material, all-weld construction, and smaller yoke assembly.

5¼"

GENERAL ELECTRIC'S 5¼-IN. PM speakers have all been designed and developed to provide full, true, low notes and excellent high frequency definition for voice or music reproduction. Skillful designing has been applied to all details to assure the best possible results.

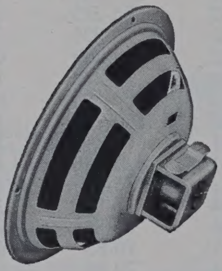


6½"

GENERAL ELECTRIC 6½-inch loudspeakers are the result of years of persistent development to improve performance. Never were ideas introduced and combined with better quality materials. Greater sensitivity and power capacity in more compact space was achieved by these methods.

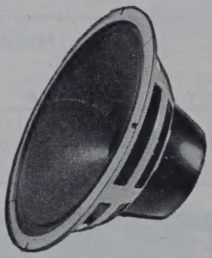
8"

The NEW ALNICO 5 PERMANENT MAGNET material was chiefly responsible for maintaining the excellent performance of the G-E 8-inch speakers and still keeping the overall size smaller. The speakers are capable of handling full audio power with very little distortion. These speakers are recommended for quality in design and faithful reproducing characteristics.



10"

GENERAL ELECTRIC'S new 10-inch P.M. speakers are the result of application of latest developments in scientific laboratory tone reproduction. Especially designed for brilliant reproduction of voice and music. They represent a perfect balance in relative factors of performance ability, cost, and appearance.



12"

GENERAL ELECTRIC'S powerful 12-inch permanent magnet loudspeakers are designed to provide faithful tone reproduction at high levels. They equal or surpass the performance of electro-dynamic speakers of the same size. All weld construction has minimized distortion at maximum operation levels by eliminating vibration.

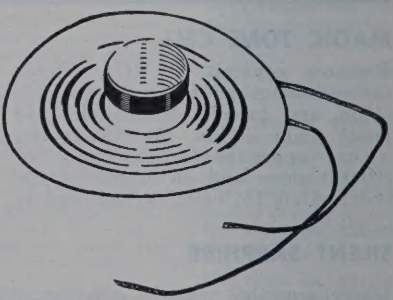
G-E LOUDSPEAKER FEATURES

ALNICO 5 MAGNET MATERIAL is one of the great wartime engineering developments. Its energy per unit volume — approximately three times as great as other magnets—has enabled G-E engineers to design a new line of smaller speakers with better performance characteristics.



ALL WELD CONSTRUCTION of the newly designed G-E Alnico 5 Loudspeakers not only reduces the weight and size but also increases the rigidity necessary for perfect alignment of all parts. It also eliminates the possibility of dust and moisture accumulation and simplifies the replacement of damaged cones.

ALUMINUM FOIL BASE VOICE COILS only are used in all G-E permanent magnet speakers. Exact concentric location with the collar of the spider assembly insures excellent alignment. Humidity or excessive temperature variations do not affect the aluminum foil voice coils, making this type of speaker ideal for receivers designed for use in export markets.

The Altec Lansing Model 604B Duplex and associated N-1000B Network represents the finest loudspeaker on the market. Manufactured by the same company which makes the famous "Voice of the Theatre" loudspeaker systems used by leading motion picture theatres, this compact unit has all of the fine design principles and construction that have heretofore been available only in the most costly loudspeakers offered for professional use and laboratory standards. Price has not been spared to make the Duplex the peer of all loudspeakers.

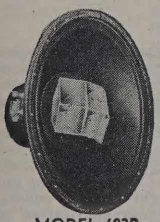
The unusual features are (a) Two-way operation utilizing separate diaphragms and voice coils for high and low frequencies. (b) Multicellular horn to provide uniform sound distribution over a wide area. (c) Alnico No. 5 permanent magnets designed for total absence of external stray fields. (d) Both the high and low frequency voice coils made of edge-wise wound ribbon to provide 22% greater efficiency. (e) Large 3″ low frequency voice coil for high power capacity. (f) Frequency response of 30 to 16,000 cycles more than spans FM range. (g) Low crossover of 1,000 cycles to assure that the cone will operate as a stiff piston. (h) Overall acoustic efficiency 3 to 5 db greater than the ordinary loudspeaker.

The Model 604B Duplex Loudspeaker and associated N-1000B Network are available separately, or can be supplied together in a number of specially constructed baffle cabinets as illustrated. The cabinet combinations are known as Duplex Loudspeaker Systems.

The Duplex Loudspeaker particularly meets the critical requirements of broadcast and recording studio monitoring, high quality public address and music distribution systems, and when used with 16 mm. sound equipment will increase the audience coverage manyfold. Music lovers and discerning people require the Duplex for home use with fine phonograph records and FM reception.

After making acoustic measurements on hundreds of speakers and speaker systems, Altec Lansing makes this unqualified statement: to the best of our knowledge, the frequency response curve of the 604B Duplex cannot be equalled by any speaker unit or speaker system outside the large theatre-type systems!

MODEL 603B MULTICELL DIA-CONE SPEAKER



MODEL 603B
DIA-CONE SPEAKER

The Altec Lansing 603B Multicell Dia-Cone represents a fundamental improvement over the old 603. These new features make the 603B the unanimous choice of those who require an economical, high-quality speaker. For the sound man it offers high efficiency and wide angle sound distribution; music lovers will delight in its frequency response and freedom from distortion.

In the new 603B the magnets of Alnico V are 30% larger than before and in their massive magnetic circuit with no stray fields provide an almost 100% increase in efficiency (2.5 db over the old 603). An improved cone technique greatly increases the high frequency reproduction and smooths the overall response.

All of the features that contributed to the excellence of the old 603 have been retained. The 3″ voice coil is wound with edge-wound aluminum ribbon, the Dia-Cone principle provides extended frequency response from the aluminum diaphragm over the voice coil, the multicell horn loads the high frequency diaphragm and gives smooth distribution of high frequencies over a wide angle, the large 15″ cone insures full bass reproduction and large power-handling capacity.

MODEL 600B
DIA-CONE
SPEAKER

The Altec Lansing Model 600B Dia-Cone Speaker is similar in design to the Model 603B Dia-Cone, using the exclusive Dia-Cone principle. It meets the needs of those who do not wish to invest in more expensive speakers, yet whose training, musical education, sound consciousness and discriminating hearing, demand faithful reproduction of sound.

The Model 600B Dia-Cone speaker has an Alnico V permanent magnet and is mounted in a 12″ frame. It uses a 3″ edgewise wound aluminum voice coil to which is mounted a domed aluminum alloy metal diaphragm and a seamless molded paper cone. The cone vibrates with the voice coil as a piston up to approximately 2,000 cycles. Above this frequency, the domed metal diaphragm, with its high mass stiffness, continues to operate as a piston with the voice coil, resulting in true reproduction of the higher frequencies.

Because of its efficiency, small space requirements, light weight and superior quality of reproduction, the Model 600B Dia-Cone Speaker is an ideal unit in the lower priced speaker field.

A completely new cone technique has extended and smoothed out the frequency response of the new 600B Multicell Dia-Cone to the point where this model represents a vast improvement over the earlier 600 model.

MODEL 400B
DIA-CONE SPEAKER

The Altec Lansing Model 400B Dia-Cone 8″ speaker has been designed especially for uses where the benefits of a larger speaker can not be taken advantage of because of space and weight limitations.

The Model 400B Dia-Cone is a low-priced, high-quality unit of very high efficiency—a much greater efficiency than is found in the ordinary 8″ speakers. Its light weight and small size make it ideally adaptable for portable uses such as 16MM sound, magnetic recorders, and in installations such as airplanes, buses, etc.

MULTICELLULAR HORNS

Altec Lansing multi-cellular horns are constructed from exponential horn cells grouped in different configurations to meet various sound distribution requirements. Each cell is a true exponential horn.

The large multi-cellular horn provides the best way of covering long distances and large areas with high levels of quality acoustic power in the frequency range above 200-300 cycles. By choosing the proper configuration of cells, the sound output can be directed for even distribution over any horizontal and vertical area desired; and conversely, to a large degree the sound can be kept from unwanted areas such as walls and ceiling which might produce echoes, slaps, reverberations, etc. These horns find particular application in large buildings with high noise levels, reverberant cathedrals, ball parks, skating rinks, stadia, race tracks, airports, church carillons, sports arenas, etc.

The chart shows multicellular horns available. Note that a throat is not supplied as part of the multi-cellular horn and must be ordered separately according to the type required.

290 SPEAKER

The Altec Lansing 290 speaker unit is designed to fit on the throats of various Altec Lansing multi-cellular horns. Using Alnico 5 permanent magnet, its efficiency when mounted on a multi-cellular horn is such that a sound level of 98 db (ref. 10^{-16} watts per square centimeter) is produced at five feet distance for an electrical input of 0.1 watt at 1000 cycles.

The use of tangential compliances in the diaphragm and edgewise wound ribbon wire in the voice coil provide maximum power handling capacity and acoustic output. Beryllium copper leads, spot-welded to the voice coil, provide heavy duty connections which will not fatigue under use. The entire diaphragm and voice coil assembly which is mounted in a cast bakelite ring, is field replaceable.

When using the 290 speaker unit for all range reproduction, it is necessary to attenuate the frequencies below 300 cycles which would otherwise damage the diaphragm and voice coil assembly. This attenuation may be accomplished by the proper sized capacitor either in the input or output circuit of the final power amplifier.

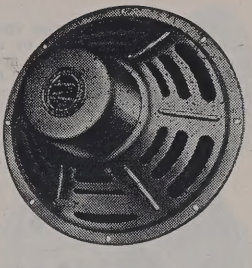
Standard Series speakers, although moderately priced, are exceptionally good in performance and are highly recommended for use in radio and television receivers, recorders, public address equipment, intercommunication systems and similar applications. Models listed on this page have been completely redesigned in every detail. Magnetic structures have been designed to achieve maximum gap energy, cones selected for uniformity of response, and all speakers are completely dust-proof. Models listed are standard fidelity response only. Standard Series speakers are finished in aluminum.



ALNICO 5 PM MODELS

These PM speakers embody the highly efficient Alnico 5 magnets which insure long life and highest efficiency. Because Alnico 5 magnets are many times more powerful, ounce for ounce, than their predecessors, speakers so equipped offer obvious advantages: lighter weight, for savings in shipping costs; and smaller size, for savings in space in cabinet installations.

JENSEN HYPEX PROJECTORS

VH-24
VH-20
VH-15

Because of the Hypex formula (Patent 2,388,262) giving wider sound distribution and greatly improved acoustical performance, JENSEN Hypex projectors are superior to the usual "exponential" type horns. The Alnico 5 unit is entirely enclosed within the one-piece rigid horn yet easily removed and replaced. Stainless steel and other corrosion-resistant materials and specially treated steel parts insure against weather exposure. **Models VH-24, VH-20** and **VH-15** have mounting brackets with clutch-type heavy "U" trunnions which afford complete flexibility of adjustment with positive locking into desired position. Weatherproof terminal boxes provide easy, solderless connections with no exposed terminals. **Model VH-91** has a universal mounting bracket which permits pointing in any direction and secure locking by a single wing nut.

VR-11

Designed for the reproduction of speech and music signals at high efficiency where high noise levels exist. The Hypex formula, made famous by JENSEN Hypex projectors, is incorporated in their design giving greatly improved acoustical performance. With the sound distributed over a circle, they are especially suitable for installations where coverage of relatively large areas and suspension from the ceiling are desired. **Model VR-11** is recommended for speech reproduction while **Model VR-241**, of larger size, is intended for speech and music reinforcement. Driver unit has phenolic diaphragm; **VR-241** uses same diaphragm as VH-24 and VH-20; **VR-11** uses same diaphragm as VH-15 and VH-91. **VR-241** is equipped with weatherproof terminal box with connecting cable passing through rubber grommet and leads attached to screw terminals provided. VR-11 has two-conductor rubber-covered cable for connections. Both equipped with heavy eyebolt at top for suspension.

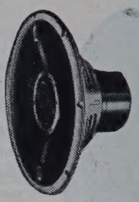
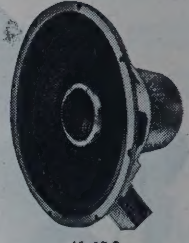
GENUINE JENSEN WIDE-RANGE SERIES

No longer is truly good listening ruled out by cost or size restrictions. Now music can come to life for everyone, for Genuine JENSEN Wide Range loudspeakers include **small sizes** as well as large . . . **low-cost units** as well as more expensive models.

The four new JENSEN Coaxial speakers which replace all previous models embody the latest developments in loudspeaker design: the Wide-Range ACOUSTIC LENS for h-f dispersion **(in Model H-510)**, annular Diaplane radiators, and new Hypex contour h-f horns. As a result these speakers achieve thrillingly realistic instrumental and vocal tone quality and subtly satisfying "presence" low in cost in comparison with previous highest-quality systems. The term "high-fidelity" applied to these Coaxial systems connotes wider frequency range, greater response uniformity and better polar characteristics.



K-210



K-410
K-310

Typical of JENSEN leadership is the ACOUSTIC LENS used on Model H-510 Coaxial. This lens acts in conjunction with the h-f horn to distribute h-f radiation uniformly over a wide angle, insuring constant balance and high quality reproduction throughout the whole room.

BASS REFLEX CABINETS

TYPE "M" **CUSTOMODE** cabinets bring new beauty and utility to the loudspeaker enclosures. Embodying the famous **JENSEN** Bass Reflex principle, they are designed to house 15" speakers. Although a basic **CUSTOMODE** unit, Type "M" cabinet may be used alone as a separate speaker cabinet. Four concealed cut-outs provided, any two of which may be removed for insertion of flush-type H-F and Level Controls. Foot Assembly furnished, loose, so cabinet may be placed on end or side as desired. Ample space atop cabinet for large receiver.

TYPE "D" Bass Reflex cabinets are handsomely styled, and are well constructed of beautifully striped satin finish veneer walnut, with interlaced bronze strip grille over matching fabric.

TYPE "B" cabinets, inexpensive but durably built enclosures, are well constructed of impregnated composition board and finished in hammered brown lacquer.

TYPE "H" cabinets are sturdily built and incorporate the famous Bass Reflex principle. With front curved to a 14⅛ inch radius, they are admirably shaped to fit into corners but may be placed in any number of positions as suggested. Type "H" cabinets are finished in brown opaque lacquer but may be refinished by the purchaser to match the locale of the installation. Brackets are furnished for mounting on wall or post. Only one size is offered—for 8-inch speakers—and JENSEN Model P-8-SH speaker is recommended for optimum performance although any 8-inch speaker may be used.

TYPE "J" cabinets incorporate the Peri-dynamic principle and are designed for wall or post mounting. These cabinets are finished in simulated brown leather with grained effect, with chrome-trimmed grille. JENSEN Model P6-TH speaker is recommended with this cabinet although any 6-inch speaker may be used. Furnished with brackets for mounting.

Jensen FINE ACOUSTIC EQUIPMENT

IMPEDANCE MATCHING TRANSFORMERS

Loudspeakers are relatively low-impedance devices with voice coil impedance values ranging from 3 to 50 ohms. Vacuum tube power output stages on the other hand, are high-impedance devices with impedance load rated anywhere from 1,000 to 14,000 ohms. To reconcile these widely differing impedances, output or impedance matching transformers must be inserted between the signal output and the loudspeaker voice coil. To determine which transformer is to be used in any given case, first of all find out the impedance of the loudspeaker in question and then locate for that speaker the transformer which will match nearest the impedance of the signal source. Differences of the order of 10% are usually of no importance but if a close match cannot be obtained, it is best to select an impedance value which will present a higher rather than lower-than-rated impedance to the output tubes. Thus where a 5,000-to-16 ohm transformer is needed, it would be better to select a 6,000-to-16 ohm unit than a 4,000-to-16 ohm unit. For full and complete treatise on impedance matching, consult Jensen Technical Monograph No. 2. (Price 25c).

ADJUSTABLE IMPEDANCE

Type "ZX" For matching conventional "plate" impedance values. Adjustments are easily made with flexible lead and pin-tip jack. Impedance values: voice coil, 4,500, 7,000, 10,000 and 14,000 ohms. All except voice coil are center-taped for push-pull tubes.

Cased Type. Pin-Tip Adjustment. Not Mountable on Speaker.

QUAM DESCRIPTIVE PART NUMBERS: Of great convenience in ordering because they convey the specifications of the speaker. First digit indicates size; second letter signifies type, i.e., E: Electro; A: Alnico V Permanent Magnet; last numbers indicate either field resistance or magnet size in ounces. For example: #5E45 is a 5" Electro 450 ohm field; #4A1 is a 4" Alnico V P.M. with 1 oz. magnet.

QUAM ADJUST-A-CONE SUSPENSION

While in other speakers, the spider is cemented in place with no means of accurate final adjustment, the QUAM method permits precision centering of the voice coil in a final production operation.

QUAM U SHAPED COIL POT

A patented feature used throughout the QUAM replacement line, provides an unbroken flux path of sufficient cross section to carry the full energy of the magnetic field.

Waterproof Permanent Magnet Driver Units

Latest improvements are incorporated in these driver units. Higher watt-handling capacity, greater efficiency and practically lifetime operation. Finest grade of Alnico V steel magnets and Armco magnetic iron throughout. All steel parts plated to prevent corrosion. Units are magnetized, using an electromagnetic cutout switch which gives the maximum flux density obtainable in the gap. All magnets are measured for flux density and each unit is tested with special apparatus for power handling capacity as well as 300-volt ground-test, making for uniformity and ability to withstand all types of service.

Particularly adapted for use in factories and in auditoriums where complete coverage is desired. Can be camouflaged to blend with ceiling architecture.

IN ALL RACON RADIAL CONE HOUSINGS the upper deflector is made of heavy gauge steel, back cone cover of steel, and lower deflector of **RACON ACOUSTIC** material to prevent resonant effects prevalent in all metal reflecting surfaces. Stormproofed for all weather conditions. These cone housings are furnished without speakers.

ST-415
ST-417

The most efficient horns obtainable. Output from any straight trumpet is approximately 2 DB higher than corresponding re-entrant type with the same input. This is because straight trumpets lack the attenuation from resistance and reflection which is inherent in all re-entrant horns. Will override extremely high noise level, indoors or outdoors.

"DeLuxe" and "Stormproof" Trumpets are made of Racon Acoustic Cloth processed by a patented method which gives a non-vibratory wall, thereby increasing the output of the horn without loss due to wall vibration. Supplied for indoor use (DeLuxe type) and for outdoor use (Stormproof type)—guaranteed for life in all kinds of weather and temperature.

"All Aluminum" Trumpets are made of heavy gauge aluminum spinning with rolled beaded edge and cast aluminum throat sections.

"Unbreakable" Trumpets are made of heavy gauge aluminum spinning reinforced and damped with Patented Racon Acoustic Material to prevent wall vibration.

Larger sizes are useful for chime systems, airports, stadiums, parks, playgrounds, music festivals, for both excellent speech and music. Smaller sizes for railroad and bus terminals, waiting rooms, factories.

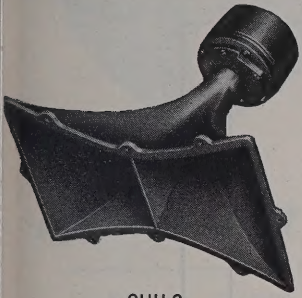
CELLULAR HORNS



CHU-2

This series of tweeters provides an economical and effective method of extending the range of conventional cone speakers. When used in conjunction with any well-designed 12″-15″ cone speaker, a uniform response range is provided, from the lowest frequency of the cone to the limits of present-day program material. Response is essentially flat to 12,000 cycles, with usable output to 15,000 cycles. Cellular horn design permits wide angle distribution. All models **must** be used with a crossover network for optimum performance. The networks listed below are recommended and when employed, any of the tweeter models may be used with amplifiers having an output rating to 25-30 watts.

MODEL P-52HF Separate 2-Way System

In order to provide a de luxe presentation for the most discriminating audience, Stephens engineers have designed the Tru-Sonic Separate 2-Way Speaker System. Space requirements are greater than for the Tru-Sonic Coaxial unit, for in order to extend the tone range and permit the ultimate in realism, larger physical proportions are necessary. The P-52HF is standard in the Tru-Sonic Model 52U Utility Cabinet. Components for 2-Way Speaker Systems

Several systems of different crossover frequency and size may be assembled from the components shown here. However the same series of horns must be used with crossover networks of the same series number. For example, P-30 and P-40 Drivers should be used only with Series 400 and 600 Horns and Crossovers. The P-15 Driver is used with the Series 800 Horns and Crossovers only. It is desirable to use the lowest crossover and complementary components that the individual's space limitations and economy will permit. On the Series 400-600 Crossovers 2L-F, 8 ohm drivers, preferably Model P-52LX, are recommended.

HIGH-FREQUENCY HORNS

In order for the listener who is off the axis to receive his balanced proportion of high to low tones, the high-frequency beam must be properly deflected. This is accomplished in Tru-Sonic standard High-Frequency Horns by utilizing multiple cells nested together so as to provide coverage through a large horizontal angle and a smaller vertical angle. The normal listening area is entirely served in this manner with high frequencies. The High-Frequency Horn serves an additional important purpose: its design provides proper acoustic loading on the high-frequency unit without which it cannot operate efficiently.

HIGH-FREQUENCY DRIVERS

As generators of acoustic power in the upper end of the audible spectrum, the Tru-Sonic High-Frequency units present a perfect blend of sound-engineered design and listener preference. Acoustic response, in combination with Low-Frequency units, has been adjusted to levels picked as being most pleasing to a large majority of selected listeners. Actual listening tests on scores of representative groups of people have dictated the design of the acoustic proportions in the critical compression chamber.

LOW-LOSS CROSSOVERS

By means of the Tru-Sonic Dividing Network, or electrical crossover, the Low-Frequency reproducer receives the lower portion of the audible spectrum. The High-Frequency reproducer receives the energy carrying the treble tones and distributes them throughout the entire listening area without loss of level. Enclosed in non-metallic containers to eliminate distortion with varying frequency, the design of these crossovers allows 12 db attenuation per octave, the standard in universal practice. Attenuation is 3 db at crossover frequency; phase rotation is 270°. Low insertion loss through perfected construction is ½ db. Input impedance 16 ohms, low output impedance 16 ohms, high output impedance 16 ohms on all models.

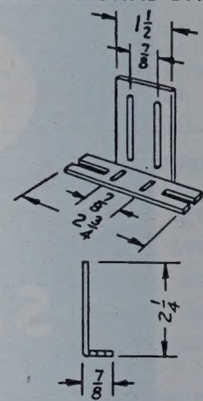
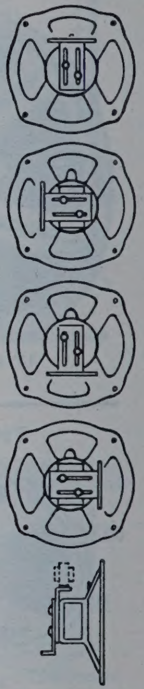
"EASY MOUNT" MOUNTING BRACKET DIMENSIONAL DATA



A FEW OF THE MANY APPLICATIONS



See Mounting Brackets, Bottom of Next Page.

*These Models Use Centerless Ground Magnets

The centerless ground magnet, a relatively new type of construction (illustrated at right), eliminates the conventional pole piece, reduces the overall depth of the speaker and results in higher magnetic efficiency per magnet weight. However, its greatest advantages can be obtained only when the diameter of the voice coil bears a suitable relationship to the length of the magnet.

MODEL LH

REFLEX LOUDSPEAKERS

The reflex horns pioneered by University represent the most efficient method of converting electrical power into acoustic energy. When used with University driver units, they are capable of conversion efficiencies up to 50% and in addition, provide compactness and weather protection without any sacrifice in performance.

Heavy gauge metal and corrosion resistant finishes on horn and hardware are assurance of trouble-free performance regardless of changes in temperature and humidity. Each speaker is equipped with a rubber damping rim which prevents vibration and mechanical resonance. Adjustable UNIVERSITY "U" bracket mounting simplifies installation and holds the speaker firmly locked in any position.

Four models cover every public address requirement. Model GH has the longest air column and is ideal for the reproduction of symphonic music. The model LH with a higher cutoff is designed as a general purpose speaker and is recommended for music transmission where economy without sacrifice of quality is essential. In installations where a smaller horn is required, the Model PH will render excellent service for both speech and music. The Model SMH will find its widest application in the reproduction of speech where clarity and a high degree of intelligibility are necessary. **Accessories include Model PMA adapter and 2YC connector.**

BREAKDOWN PROOF DRIVER UNITS

University driver units are breakdown proof and guaranteed for one year. Ratings are conservative and operation over long periods is assured. They are of the PM dynamic type, incorporate highest quality Alnico magnets and one-piece molded phenolic diaphragms. Unique "rim centering" construction eliminates aligning pins and permanently centers the voice coil and head assembly in a much closer magnetic gap. This results in a higher conversion efficiency and misalignment due to shock or vibration is virtually eliminated. Hermetically sealed housings provide complete protection from outdoor exposure and corrosive fumes.

The PA-30 has a 30-watt built-in line matching transformer. Transformer terminals provide 16, 165, 250, 500, 1000, 2000-ohm taps for constant impedance systems and 2½, 5, 10, 20 and 30-watt taps for 70-volt constant voltage systems. Use the PA-30 or SA-HF for high power installations or where occasional overload is a problem. Model MA-25 represents the best "watts per dollar" value of any driver unit made. It combines efficiency, waterproof construction and economy.

INDUSTRIAL PAGING SPEAKERS

These speakers are reflex air column horns with built-in hermetically sealed driver units. Models CR, 1B8, and MIL are directional and model IBR has a radial deflector for uniform 360° dispersion. They are capable of continuous use for intercommunication and paging on shipboard, docks, loading platforms, terminals and industrial plants.

Models CR can handle 18 watts of input power continuously, so that it is useful for high power alarm or announcing systems. Models IB8 and IBR have a continuous power handling capacity of 12 watts, which recommends them for paging or announcing in noisy industrial areas. The models MIL and MIS with a 3 watt continuous power capacity are efficient intercommunication speakers. The model MIS is designed for flush panel mounting.

While capable of producing adequate volume with low power, these speakers can handle more power than any other speaker of comparable size and weight. Modernization of old sound systems is easily accomplished by replacement of obsolete speakers with these models. Standard voice coil impedances permit installation without changes in the existing line or amplifier.

WIDE RANGE WEATHERPROOF COAXIAL SPEAKERS

The Model WLC is a high fidelity co-axial speaker with a response range essentially flat from 50-10,000 cycles. It includes a 12" Cone speaker, a unit-driven tweeter and a built-in crossover network. Corrosion-resistant, all metal construction permits constant exposure regardless of temperature and humidity. Ideally suited for concert band-shells, drive-in theatres and all indoor or outdoor installations where high quality reproduction of music and voice are essential. A sturdy mounting bracket facilitates installation and permits tilting and locking the speaker in any desired vertical plane.

RADIAL REFLEX PROJECTORS

Air column horns with radial deflectors for uniform 360° sound distribution cover large areas and override high noise-levels, without blasting. Both rims rubber loaded to minimize mechanical resonance. The long air column of the RLH and its low frequency cutoff make it well suited for music and general applications. The smaller model RPH, with a somewhat higher cutoff, will serve for both music and speech. The RSH finds wide application for high clarity reproduction of speech. Any standard make of 8" or 12" cone speaker can be installed in these baffles. Both models are watershedding and may be used indoors or out. They are shipped complete with hardware but less cone speaker.

University SPEAKERS

SUPER POWER SPEAKERS

UNIVERSITY super power speakers are the answer to every public address installation where tremendous amounts of concentrated power must be transmitted over long distances.

The Model 4A4 incorporates 4 PM driver units mounted on the back of a heavy cast mounting plate. Each driver opens into a reflexed air column on the front of the mounting plate. The four air columns feed into a common bell. Compactness makes them ideally suited for aeroplane broadcasting and use in Church towers.

In the Models B-6 and B-12, the PM driver units are mounted circumferentially on a rugged "tone chamber" casting which provides individual acoustic paths from each driver unit to a mixing chamber at the center of the casting. The patented design of the mixing chamber and the acoustic paths minimizes high frequency cancellation.

All speakers are completely waterproof and characterized by their ruggedness. Power ratings are conservative and projection ranges are often exceded in actual operation. **Speakers of this type were recently heard 15 miles in a carillon installation at the Empire State Building in New York City.** "U" brackets permit a vertical swing of approximately 120° and locking in any position. Longer horns are available with B6 or B12 for music. For B6, diameter 30 inches, length 48 inches. For B12, diameter 30 inches, length 32 inches. Response 85 - 6000 cps. Prices on request. **NOTE:** Model 4A4 is sold and shipped less driver units. Standard driver units Model SA-HF may be used.

RAILROAD AND MARINE TYPES

UNIVERSITY marine and railroad speakers are submergence, explosion, shock and vibration proof and are unaffected by live steam. Their reflex air columns are built of rugged castings and are equipped with Alnico V PM dynamic units.

Models MSC, MM-2TC, MM-2 and MM-2F have hermetically sealed housings and biult-in driver units. Models MSR and MM-2TC have space for volume control and line matching transformer. Tapped holes provide access to volume control and for receiving a conduit. All are designed for bulkhead mounting — the Model MM-2F may be flush mounted.

These speakers will operate efficiently under the most arduous conditions — on ships, docks, in railroad yards or locomotive cabs, — in mines, laundries and mills — wherever dirt, salt spray, humidity, explosive dusts and vapors constitute a hazard.

The UNIVERSITY PM tweeter provides the only efficient and economical method of extending the upper register to 15,000 cycles to obtain high fidelity speaker response. It can be connected to the voice coil terminals of an existing PM or field excited cone speaker through a simple, economical high-pass filter without creating any electrical unbalance. Model 4407 is an adapter which quickly changes a 12" speaker to a co-axial reproducer with response to 15,000 cycles. Models 4401 and 4402 offer compactness, high power handling capacity and wide dispersion for the construction of wide range duplex systems. The model 4404 is a complete high frequency speaker and consists of the model 4402 dual tweeter and the 4405 high-pass filter in a walnut finished cabinet. The 4405 high-pass filter or its electrical equivalent must be used with the 4401, 4402 or 4407 for satisfactory performance.

WEATHERPROOF AND INDOOR LINE MATCHING TRANSFORMERS

MODELS 5401, 5409, 5410

MODEL 5402

The new UNIVERSITY line of matching transformers is designed for use with UNIVERSITY loudspeakers in indoor and outdoor installations. Excellent performance is assured throughout the useful audio frequency range at rated output. The models 5401, 5402, 5409 and 5410 are housed in watertight enclosures and incorporate die cast mounting brackets. They may be fastened to any surface with two screws or bolts or may be fastened to the brackets of the models MIL, IBS or CR. When used in the latter manner, the mounting bracket of the transformer acts as a combined mounting support for both the transformer and speaker. The model 5402 may be mounted on the U bracket of any loudspeaker by means of a simple clamp which is supplied or on any surface with two screws or bolts. The uncased transformers for indoor use may also be fastened to any surface with two screws or bolts.

VR2 DYNAMIC MICROPHONE

A Microphone with a NEW IDEA and a NEW USEFULNESS

For the first time, the many desirable characteristics found only in several different types of microphones have been combined in a single unit. The VR2 has an easily accessible external adjustment of the most important acoustical reactors in the dynamic microphone. A smooth change from a communication-type response, with a cutoff below 500 c. p. s., through a flat response to an augmented bass, attained by a simple, positive adjustment.

The response adjustment on the VR2 has a very broad effect and does not introduce narrow peaks. It is different from anything previously introduced.

Complete with 12½′ cable and plug at microphone providing balanced line. Dull chrome finish. Net wt. less cable, 15 ozs. Hgt. 4″. Greatest diameter 3″.

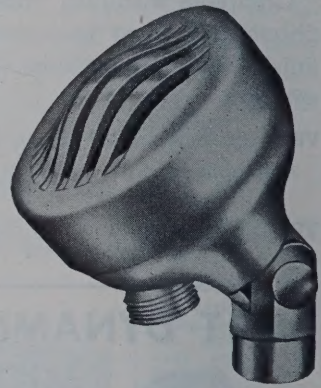
C6 CRYSTAL MICROPHONE



EXTREME SENSITIVITY. New crystal driving lever, twice as efficient as previously used, produces twice the voltage output with equal sound pressure.

BROADER RESPONSE. Results of new construction include extension of both low and high end.

BASS END IMPROVED. Naturalness insured by improvement in low frequency response.

LONGER LINES. By increasing the voltage output, the cable length may be increased proportionately. In laboratory tests, regular cables 250 feet in length have been used with a net voltage sufficient to operate any standard high gain amplifier.

MECHANICAL NOISE REDUCED. Mechanical and stand noise is no longer a factor. The C6 method of crystal mounting reduces mechanical noises by 12 db.

LESS AMPLIFIER AND INDUCED NOISE. The high output of this microphone assures a very desirable signal-to-noise ratio.

SWIVEL HEAD. All angles for semidirectional and nondirectional pick-up are provided by the ⅝" x 27 (standard) mounting connector.

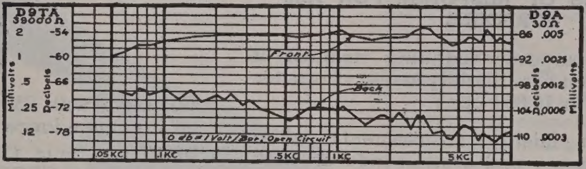
Actual Tests are Convincing   Arrange for Test with your Jobber

THE D9A DYNAMIC, a pressure-velocity combination microphone, with pick-up from front only, broad frequency response and high output, plus the usual dynamic microphone qualities of ruggedness, immunity to weather conditions, and circuit adaptability, should fill the majority of requirements.

The D9A Microphone is recommended for public address and general sound installations because its energy response field (cardioid of revolution) excludes extraneous pick-up and reduces feed-back by two-thirds. May be used for close talking due to the modified velocity section which also reduces wind noises to a minimum.



The above graph illustrates the average response characteristics for the D9A and D9AT. Voltage output levels, for 1 bar sound pressure (1 bar=1 dyne per sq. cm.) of the high and low impedance models. For 10 bar signal the output will be 20 db. higher.

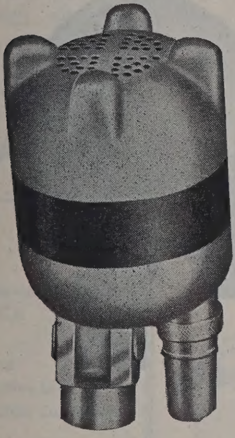
D4T DYNAMIC MICROPHONE



A QUALITY, LOW-PRICED, MOVING-COIL MICROPHONE. For general use where clear speech and natural music reproduction is required. This new AMERICAN microphone is a very efficient instrument, having a broad range, from 60 to 7500 c.p.s., and high output of —56 db (0 db=1 v/bar). The utility value lies not only in the quality and type of response but also in mechanical features, such as light weight (approximately 10½ oz.), a full 180° vertical angular setting, and positive friction lock at the swivel.

The **D4T,** high impedance, is equipped with a single-contact, shielded plug. The 50, 200 and 500 ohm models are equipped with a two-conductor plug and have a balanced line out.

The **D4** model is of voice-coil impedance, approximately 30 ohms. Lines up to several hundred feet may be used on all models except the high impedance, where line should be restricted.

The complete assembly includes 12½ feet of shielded, rubber-covered cable and shielded plug. Finished in platinum chrome. Standard mounting, ⅝'' x 27 thread.

C7 CRYSTAL MICROPHONES

The development of the new American Crystal Microphones, Model C7H and Model C7L, represents many features which have been available only in several previous types. The response characteristics have been chosen so that the C7 can be used equally well for recording with a minimum amount of amplifier equalization and also for public address. **A new system of coupling the crystal element to the diaphragm is employed which produces a smoother response and 100% greater efficiency equivalent to double the output of usual direct drive type of coupling.**
High or low impedance may be had in the Model C7. An efficient transformer is used to reduce the inherent high impedance of the crystal generator to standard line impedances. Long lines with negligible losses may be used.

NEW "Locked in" Self Centered Needle Chuck

CR-1A Cartridge is a high output, wide range unit, which incorporates a number of new developments in cartridge design. High output and improved response are obtained by a unique method used to drive the crystal element. The cartridge is supplied with pin plug connectors for ease of assembly into the arm—no soldering iron is required. The needle chuck design incorporates a "locked-in" feature whereby the chuck is prevented from moving when tension or pressure is applied to the needle screw. This feature also insures that the needle socket will remain centrally located in its opening in the cartridge. High needle point compliance and minimum record chatter are thereby guaranteed. The cartridge will operate satisfactorily with any conventional needles; however, its high-frequency response will vary somewhat with the type needle used. Best operation will be obtained with off-set needles using sapphire or precious metal stylii.

PICKUPS FOR LONG-PLAYING AND LOW SPEED RECORDS

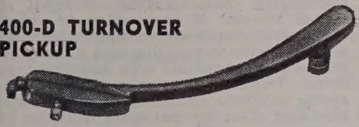
Astatic

KNOWN THE WORLD OVER
CONNEAUT, OHIO

MODEL 6D CRYSTAL TURNOVER PICKUP

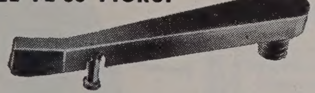
- Switches from 33⅓ or 45 RPM records to standard 78 with turn of knob at front. Plays both types of records at only eight-gram needle pressure, thus has no extra mechanism to change pressure when knob is turned, eliminating a potential source of trouble and varying reproduction quality. Employs LQD-1 Double-Needle Cartridge. Mounts seven inches from turn-table center, die-cast curved arm finished in dark brown Hammerlin.

400-D TURNOVER PICKUP



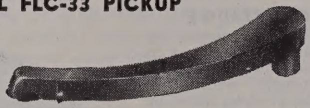
- Turnover type transcription pickup adapted from famous Astatic Studio Master "400" conventional transcription arm. Plays 33⅓, 45 or standard 78 RPM recordings at eight-gram needle pressure. Employs LQD-1 Double-Needle Crystal Cartridge. Notable excellence of frequency response, particularly at low frequencies. Gracefully curved, die-cast arm in light brown Hammerlin finish.

MODEL FL-33 PICKUP



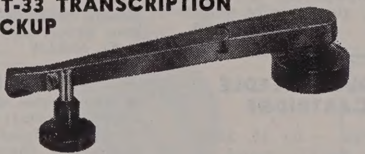
- Does the work of three pickups. Its U-J Crystal Cartridge for either 33⅓ or 45 RPM records is easily, instantly replaceable with the U-78-J Cartridge for playing standard records. No adjusting of needle pressure, nothing else to be done. Cartridges slip in and out like barrel and cap of non-threaded fountain pens. Special Type "U" Taper-Lock replaceable needle has tongue and groove arrangement to hold in position, removes merely by gripping small tab at rear of needle and sliding towards rear of cartridge. Novel design at base of FL-33 eliminates tone arm resonances, assures perfect tracking. Die-cast arm, finished in high gloss black and polished aluminum.

MODEL FLC-33 PICKUP



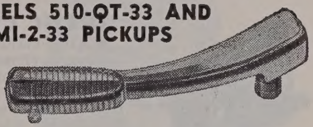
- The same important advancements in pickup engineering as the FL-33, in handsomely curved styling. Offers the same operating advantages, such as the three-in-one feature: one pickup plays 33⅓, 45 and 78 RPM Records without changing needle pressure or making other adjustments, with the simple switching of slip-in cartridges. Perfect tracking, at only five-gram needle pressure, is assured by the revolutionary new base mounting assembly.

FLT-33 TRANSCRIPTION PICKUP



- Never before, a pickup of such professional instrument quality and precision. Like the FL-33, this sleek transcription model employs the U-J Crystal Cartridge with one mil tip-radius needle, instantly replaceable with the U-78-J for playing 78 RPM Records. In addition, the U-TR Cartridge with 2.5 mil tip-radius may be inserted to play standard lateral broadcast transcriptions. Special ball-bearing, anti-resonance base is adjustable to desired height, as is unique arm-rest. Feather-touch needle pressure of five grams is accomplished by a revolutionary hinged division of the arm, which also contributes to perfect tracking and elimination of surface noise. Die-cast arm and base look their fine instrument part, with finish in telephone black. All three "U" Series Cartridges are available with diamond stylus tips instead of the regular sapphire.

MODELS 510-QT-33 AND 510-MI-2-33 PICKUPS



- Add Astatic's new anti-resonance swivel base, and the famous "QT" Crystal Cartridge with special one mil tip-radius, precious metal or jeweled stylus, to the popular Astatic Model 510 Pickup — and you have this new long-playing model, the finest performer in its price class. Permanently adjusted to six-gram needle pressure, its short mounting centers make it ideal for a host of long-playing applications. Outstanding characteristics are high uniform output and low needle point impedance. Die-cast arm, finished in Hammerlin opalescent grey. Specify Model 510-MI-2-33 for the same pickup, except for employment of Astatic's revolutionary Magneto-Induction Cartridge.

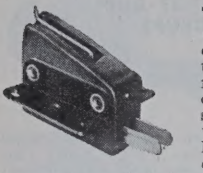
KNOWN THE WORLD OVER
CONNEAUT, OHIO

CARTRIDGES, NEEDLES, ETC. FOR LONG-PLAYING AND LOW SPEED RECORDS



THE GC CERAMIC CARTRIDGE

● First major stride in cartridges employing ceramic elements since Astatic pioneered in this type unit. The first with replaceable needle. Takes "Type G" needle—with either one or three-mil tip-radius, precious metal or sapphire—which slips from its rubber chuck with a quarter turn sideways. Resistance to high temperatures and humidity is not the only additional advantage. Output has been increased over that of any ceramic cartridge available. Light weight and six-gram needle pressure make it ideal for a great variety of modern applications. Model GC-J fits standard ½" mounting and RCA 45 RPM record changers. Model GC-1J fits RMA No. 2 Specifications for top mounting .453" mounting centers.

THE CQ CRYSTAL CARTRIDGE

● A new Astatic design, featuring miniature size and five-gram weight. Model CQ-J fits standard ½" mounting and RCA 45 RPM record changers. Model CQ-1J fits RMA No. 2 Specifications for top mounting .453" mounting centers. Needle pressure five grams. Output 0.7 volts at 1,000 c.p.s. Employs one mil tip-radius, Q-33 needle. Cast aluminum housing.

THE LQD DOUBLE-NEEDLE CRYSTAL CARTRIDGE

● The LQD Cartridge — for 45, 33⅓ and 78 RPM Records — quickly became the first choice of many of the nation's largest users, on the basis of comparative listening tests, and is, today, the PROVED TOP PERFORMER for turnover type pickups. Outstanding for excellence of frequency response, particularly at low frequencies. A gentle pry with penknife removes ONE "Q" needle for replacement . . . without disturbing the other needle, without removing cartridge from tone arm. Gentle pressure snaps new needle into place. Stamped aluminum housing. Model LQD-1J, illustrated, has needle guards and front bracket for turnover knob. LQD-J furnished without guards or bracket.

THE U-J CRYSTAL CARTRIDGE*

● The unparalleled performance and triple duty service of the FL Series Pickups is largely due to the U-J Crystal Cartridge. A child can slip it instantly from the pickup and slip in the U-78-J or U-TR Crystal Cartridges to switch from 33⅓ and 45 to 78 RPM records or broadcast transcriptions. Secures itself on slip-in principle, the same as barrel and cap of some modern fountain pens. No changing of needle pressure, nothing else to be done. Five-gram needle pressure. Replaceable sapphire stylus with one mil tip-radius. The U-J replaces, and is interchangeable with, the discontinued LP-33. An ideal replacement for Philco Part 45-1609, Balanced Fidelity Reproducer.

Code ASXAT............................**List Price $8.90**

THE U-78-J CRYSTAL CARTRIDGE*

● Interchangeable with U-J Crystal Cartridge, in "FL" and "FLT" Series Pickups, to play conventional 78 RPM Records. See above description under U-J Cartridge. Five-gram needle pressure, has replaceable sapphire stylus with three mil tip-radius. Replaces LP-78 Cartridge.

THE MI-2J-33 MAGNETO-INDUCTION CARTRIDGE

● Peak fidelity of reproduction that LASTS, even under the most consistent service or adverse climatic conditions. Unchanging characteristics are result of radical reversal of engineering precedent and drastic simplification, which eliminate need for delicate handling and other common sources of trouble with magnetic type units. Troublesome, costly armature balancing problems also eliminated. Mumetal housing provides increased shielding effect for maximum reduction of hum. Fixed, sapphire stylus with one mil tip-radius.

PRESTO RECORDING CORPORATION

A reproducer of any make may be installed on the 64-A Transcription Turntable

PRESTO 64-A TRANSCRIPTION TURNTABLE

The Presto 64-A transcription turntable offers the following features which are of major importance to the owner and operator: Unusual mechanical simplicity . . . low mechanical disturbance . . . perfect speed accuracy . . . extreme ruggedness for long continuous operation . . . instantaneous selection of desired speed . . . and no requirements for mechanical adjustments.

This transcription turntable is directly gear driven and employs two separate motors, one for 33-1/3, and the other for 78.26 rpm. There is no friction device of any kind in the mechanism and no mechanical shift is required to change speeds. To select 33-1/3 rpm, 78 rpm or "off," the operator merely throws a three position switch. These changes may be made as rapidly as desired while the turntable is in motion with no damage to the mechanism. Only one motor at a time is in operation. The transmission "over runs" the motor which is not turning and thus does not carry it along in rotation although the stationary motor is never disengaged from the mechanism.

SPECIFICATIONS

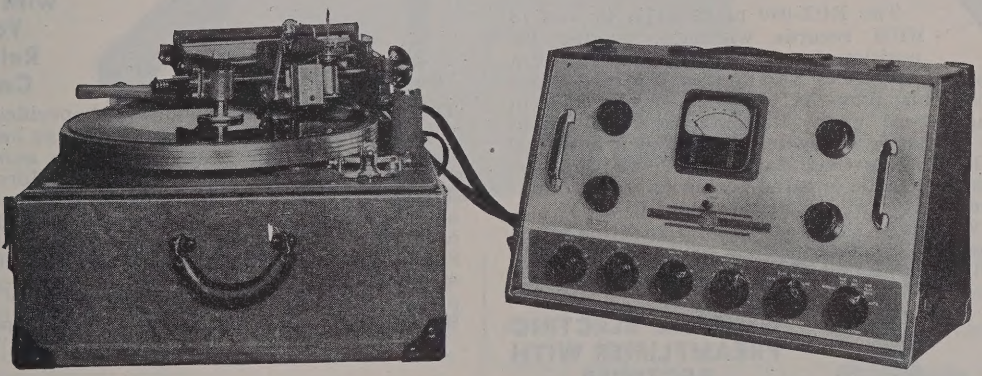
Standard Equipment: The 64-A transcription turntable includes the electro-mechanical gear drive, turntable and cabinet. A reproducer and network is not included.

Speed Accuracy: No deviation from 33-1/3 and 78.26 rpm.

Noise Level: Mechanical noise originating in the equipment over 50 db below program level.

Power Requirements: Approximately 75 watts from a 115 volt, 60 cycle line. Motors are of the 1800 rpm synchronous type and are available for other voltages and frequencies at additional cost.

Mounting: Turntable and gear drive mounted in heavy wood cabinet 24x24x33 inches (61x61x84 cm.). Finished in two tones of grey lacquer. List Price, **$495.00**



PRESTO 6-N RECORDER AND 90-B AMPLIFIER

The PRESTO 6-N Recorder and 90-B Amplifier is the ideal recording equipment for portable or stationery operation.

The 6-N Recorder is outstanding in its suitability for brodcast stations because it offers all the qualifications for good recordings, including master records, at the most economical price. It is ideal for the station requiring delayed broadcast of network programs, and for reference recordings.

The 6-N standard equipment includes the Presto 1-D cutting head, spiraling feed screw, vertical damper, time scale and pick-up. It is available for microgroove recording at addition cost.

The Presto 90-B recording amplifier contains all the facilities necessary for operation on remote assignments, but with all overall performance found only in high-fidelity studio equipment.

It consists of three preamplifiers with individual gain controls, a mixer circuit, a master gain control and recording amplifier. Provision is made for connecting the Presto 161-A automatic equalizer (radius compensator).

A five-position selector switch provides the following characteristics: 1—flat response, 30 to 15,000 ±1 db; 2—NAB 33⅓ rpm recording; 3—present day 78-rpm recording; 4—NAB playback, and 5—automatic equalization. The flat response can be modified by variable bass and treble controls, giving emphasis up to a maximum of 20 db at 100 and 7,500 cycles per second or 20 db de-emphasis at 7,200 cycles per second.

Noise is 55 db below recording level and distortion at maximum output is less than 1.5%.

The use of input and output selector switches makes the 90-B amplifier unusually flexible. It permits combining the signals of three microphones or of two microphones and either one of two pickups. By using the "Line" position, recordings can be made from an incoming program line. The output selector has three positions; playback (public address), continuous recording and simultaneous recording. While recording, the line jack provides a monitoring outlet or permits feeding a program line at the correct level.

The correct level is monitored by means of a Weston Type 30 VU indicator with illuminated scale and its closely controlled electrical and dynamic characteristics make it an ideal volume indicator for recording.

THE QUALITY UNIT THAT EXCELS THEM ALL!

Model 161 with Diamond Stylus. A professional magnetic type reproducer for lateral-cut phonograph records and transcriptions. It has virtually no intermodulation nor harmonic distortion at any amplitude capable of being recorded. There is no frequency discrimination over the range from 30 to 15,000 cycles per second and is completely free from any vertical response. Tracking pressure is 18 grams. Diamond stylus has .0025 inch radius for use with all 88 to 136 lines-per-inch recordings. Withstands practically any shock through unique guard into which stylus recedes. Arm is supported on frictionless hardened steel alloy cone pivots for perfect tracking, even on badly warped discs. Diamond stylus life is approximately 5,000 hours, at least ten times the life of sapphire. Overall length of arm, 14¾"; height, 2¾". Supplied with arm rest. Shipping weight, 2 lbs.

SWEEP FREQUENCY GENERATOR
Model 125

The Clarkstan Sweep Frequency Generator is an electronic device used to determine quickly the behavior of audio and other alternating electrical apparatus with respect to frequency and associated phenomena.

The complex signal is produced by scanning photo-electrically a synchronously rotating disc. The modulation on the disc is the photographic reduction of a precision pattern.

The accuracy of the original disc assures a positive signal which limits anomalous distortion, frequency and other discriminations which could be introduced by non-stable reactive components of more complex circuits.

The Model 125 Sweep Frequency Generator is recommended for use in production testing, development laboratories, schools and colleges, motion picture sound equipment, magnetic recorder development, radio stations and maintenance and service technicians.

SPECIFICATIONS — Model 125A S.F. Generator

OUTPUT — 7 volts, open circuit; 50 milliwatts or 5 volts into 500 ohms. IMPEDANCE — Internal impedance 200 ohms. POWER CONSUMPTION — 25 watts, 115 v., 50 & 60 cycles. COMBINATION WIRE RECORDER MECHANISM

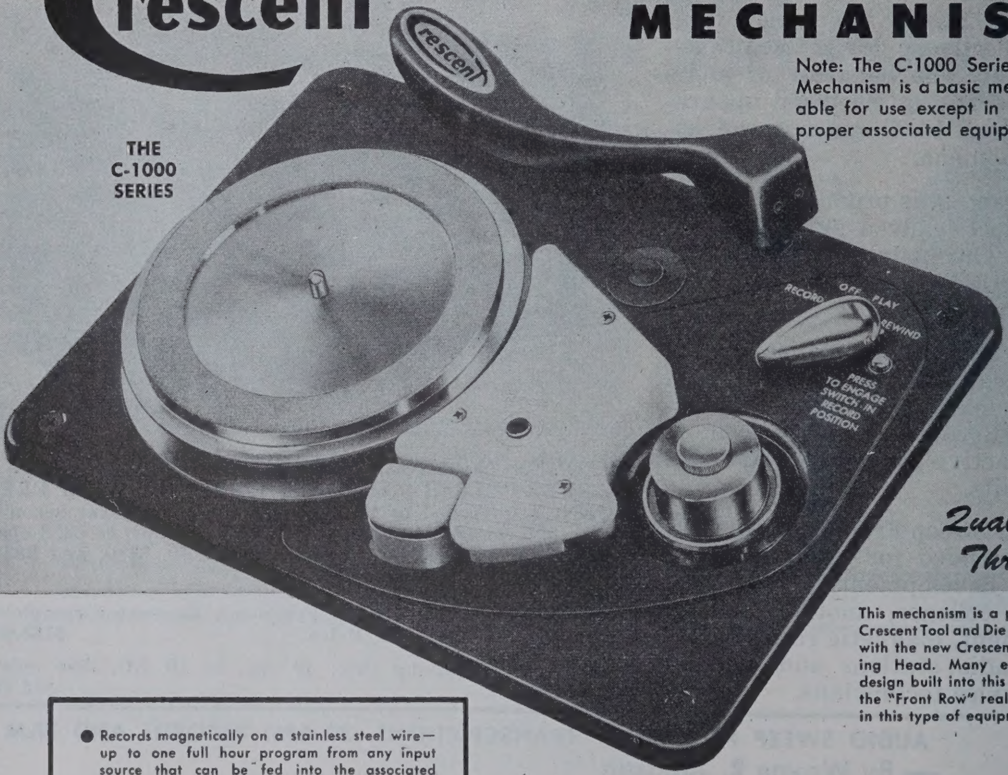
Note: The C-1000 Series Wire Recorder Mechanism is a basic mechanism not suitable for use except in combination with proper associated equipment.

THE
C-1000
SERIES



Quality Built Throughout!

This mechanism is a product of the famous Crescent Tool and Die shops and is equipped with the new Crescent-engineered Recording Head. Many exclusive features of design built into this head give recordings the "Front Row" realism so much desired in this type of equipment.

- Records magnetically on a stainless steel wire—up to one full hour program from any input source that can be fed into the associated amplifier equipment.
- Plays back magnetically with a fidelity, dynamic range, and absence of background noise that accounts for the present heavy demand for Crescent Wire Recorder mechanisms.
- Plays or records on the wire from phonograph records much better than most single purpose record players... because the heavy duty recording motor and the heavy, accurately machined, die cast take-up drum are used as a phonoturntable. The new Crescent tone arm, originally designed for Crescent Automatic Record Changers, adds its share to listening and recording pleasure.
- Rewinds at fast speed . . . 5 times as fast as recording speed . . . so that it takes only a short time to reach any part of the wire to Record, Play, Erase, or Re-record.
- One single knob controls the mechanism . . . because a special control assembly combines the electrical and mechanical control functions. Wire recorder automatically shuts itself off, at end of wire, in all positions of operation . . . recording, playing, or rewind.

A New Combination Record Player and Magnetic Recorder-Reproducer

Combined with proper associated equipment, the new Crescent Wire Recorder Mechanism becomes one of the most interesting devices now available to amateurs, experimenters, sound men, service men, or anyone else interested in the field of electronic equipment. There are at least a dozen practical uses for a good wire recorder in every home and office in America.

The current public demand for wire recorders is directly traceable to the last war. War production helped materially to expand the plant, personnel, machinery and engineering facilities of Crescent Industries to a position of leadership in the design and manufacture of wire recording equipment. The Crescent Recording Head is a specific example of Crescent engineering and manufacturing skill.

This is not the whole story behind Crescent's dominant position in the field, however. It remained for the men who originally made famous the name Crescent Tool and Die Co., to turn Crescent engineering developments and specifications into reality. Their experience, skill and precision workmanship achieved a steady, day-by-day production of wire recorder mechanisms that perform so fine they enhance the value and prestige of any other equipment with which they are combined to make up a complete system.

Erase Current Switch . . . . S. P. D. T.

Crescent Recording Head . . . . Type No. WR45-C

Voice Coil Impedance

At 10,000 Cycles . . . . Approx. 12,000 ohms
At 5,000 Cycles . . . . Approx. 7,600 ohms
At 1,000 Cycles . . . . Approx. 2,240 ohms
At 100 Cycles . . . . Approx. 500 ohms

Input to Voice Coil (Recording)
Peak recording level 0.6 volt rms at 1000 cycles.

Output from Voice Coil (Playback)
Recording at a level of 0.6 volt rms 1000 cycles, on standard recording wire will give approximately 2 millivolts output on playback.

Recording Wire
Uses .004 or .0036 stainless steel wire, spools, and leaders conforming to proposed R. M. A. standards.

Wire Speed

Recording and playback . . . . 2 feet per second
Rewind . . . . Average of 10 feet per second

Erase and Bias Coil . . . . Designed to operate at 30.000 cycles

Impedance at 30,000 cycles . . . . . . Approx. 6.4 ohms
Requires 700 milliamps at 4.5 volts . . . . . 30,000 cycles

Compensation . . . . Simplest form
Shunt a .001 mfd condenser across a 100.000 ohm resistor and connect this combination in series with the voice coil. An input of 15 volts rms at 1000 cycles to the circuit mentioned above will give 0.6 volts rms across the voice coil. Total audio power required is less than 2¼ milliwatts.

If additional compensation is desired, it should be included in the amplifier circuit, as any substantial reduction of the value of the series resistance will materially reduce the signal to noise ratio.

Phono-Record Player

Take Up Drum
Also serves as a *turntable* for records. The turntable is rim driven from the powerful recording motor and operates at 78 RPM. Accommodates either 10 or 12 inch records.

Phono Pick Up

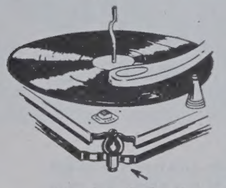
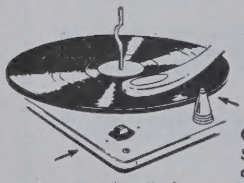
Simplicity of Adjustment—Sit-down position for 10 and 12 inch records...and position at which tone arm trips the change cycle mechanism . . . are all indexed to a single, stamped control plate which does not vary. One simple screw driver adjustment synchronizes the tone arm to this control plate . . . one of the reasons why Crescent Changers are Trouble-Free.



FREE-FLOATING—
It Floats . . . on 4 live rubber "Barry Mounts" that reduce transfer of vibration and motor rumble to a minimum!
Easy to Mount . . . Drill 4-19/32" holes, then push the "Barry Mounts" into the holes (just try to get them out without tools).
No Shipping Bracket Required . . . After changer has been installed in its cabinet, "Barry Mounts" help protect it during transportation.



CONTROLS—
Single Knob...controls ON-OFF and AUTOMATIC or MANUAL operation. Knob moves in four directions and is clearly marked.
Reject Button . . . is conveniently located on top of the tone arm support. Operated by pushing down on the tone arm when the tone arm rests on the support, or by pushing the button itself when record is being played.

CHILD-PROOF — JAM-PROOF
Tone arm may be moved to any position at any time without jamming machine and without any danger of changing adjustments.

AUTOMATIC RECORD CHANGERS

You'll like this practical, precision built, high quality record changer. *It's Trouble-Free!* Ideal both as original or replacement equipment. Simplicity of design and durability of construction assure a minimum of trouble after installation . . . cut profit losses due to extra servicing.

Changer is of the single post type to avoid chipping or cracking of records. Center post is scientifically shaped to guide the records down, on an air cushion, to the thick, velvet-like coating on the turntable which runs on a shock absorbing cork washer.

Tone arm design is such that it trips and functions perfectly with no more needle pressure than that required by any of the modern, high grade crystal cartridges. This means reduced needle scratch, reduced "needle talk", and longer record life.

Plays, automatically, 12 ten inch or 10 twelve inch records. (Not intermixed). Plays, manually, home recordings and single records. Less than 5 second change cycle for greater continuity of music.

Powerful even speed motor, special turntable bearing design, smooth rim drive and many other Crescent-engineered features combine to reduce noise, wobble and wow in this changer, and to lengthen its life.

Beautiful mahogany Hammerloid finish with deep maroon turntable, tone arm, record shelf support casting, and plastic trim, gives just the right color contrast for plenty of eye appeal.

GARRARD GARRARD

IMPORTANT NOTICE

AVAILABLE EARLY IN 1949—THE NEWEST IN A LONG LINE OF TOP QUALITY GARRARD INSTRUMENTS! A completely automatic record changer, designed to play every type of record on one turntable! It will accommodate 7", 10" and 12" records at 33⅓ rpm, 45 rpm and 78 rpm, regardless of size of center hole and regardless of grooves.

Tonearm will be available with every type of quality pickup including Magnetic, Crystal and Variable Reluctance. The new GARRARD, a masterpiece of modern industrial design will be moderately priced.

GARRARD RC65 Record Changer

Radically improved in design and in mechanical operating features. Incorporates all the scientific and technical knowledge acquired through many years of critical testing, experimentation and manufacture.

Through the years, discriminating music lovers have learned to depend on this superior mechanism as the World's Finest in record playing equipment. They know that they can rely on a GARRARD to give them consistently quiet, efficient performance. The GARRARD RC65 is built to rigid standards and is fastidiously machined and assembled to assure trouble-free performance.

GARRARD's speed regulated, governor-controlled motor, using a steel governor disc, is fashioned to give powerful and regulated running at all times. The motor runs silently at maximum record loads without vibration, rumble or speed variations. The speed regulator feature permits adjustment of motor speed to 78 rpm or to retard or accelerate the tempo of any any record to suit individual tastes or to adjust for varying line voltages. The motor has a positive automatic stop which shuts the motor off after the last record is played. The on-off switch is located on the mounting plate in such a position as to prevent interference with the free movement of the tonearm.

The RC65 is a "mixer" Changer. It accommodates both 10" and 12" records intermixed in any assortment and in any combination. There are no buttons or switches to throw. It is entirely automatic.

GARRARD's exclusive true-tangent tone arm is jewel-mounted and equipped with ball-bearings. It is constructed to give perfect parallel lift, to set down on records gently, to track silently and to give genuine "floating" response.

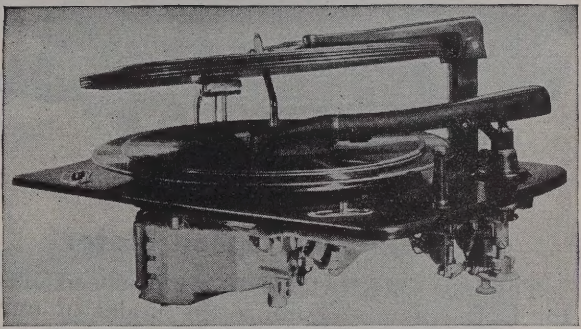
GARRARD Type V Phono Assembly

The newest unit of a long line of high quality phono assemblies for playing single records.

Here again, GARRARD has spared no effort or expense to produce the finest possible player for those who demand the best in record reproduction.

The entire assembly is typically GARRARD in that it features the finest type of phono motor—speed-regulated and governor-controlled. This exclusive feature makes it possible to adjust to perfect speed (78 rpm) or to accelerate or retard the tempo to suit the listener.

The Type V Assembly features an entirely new, unique mounting arrangement which represents the first genuine forward step in mounting design. This "bow" mounting is so efficient that even a blow struck on the motor board will not cause the tone arm to skip or repeat a groove. This is another exclusive feature and another GARRARD **"first."**



Available with your choice of quality pickups: (a) high fidelity Crystal pickup with permanent stylus, (b) Crystal pickup for use with replaceable needles, (c) GARRARD Magnetic Pickup, (d) G.E. Variable Reluctance Pickup.

GARRARD Two-Speed Motor

The new GARRARD 201-V two-speed motor is the new and improved model of our internationally famous 201T. It is now offered in its latest trouble-free form exactly as produced for the U. S. Navy and British Admiralty during the War.

The governor-controlled motor operates at either 33-1/3 or 78 rpm with absolute constancy and without waver or rumble. It is ideally suited for use where truly superior reproduction is desired.

Because of its extra-heavy rotor, which is slow-running, the resulting torque makes this motor amazingly smooth and silent. In sheer performance, it is the finest we have to offer. It is a self-starting induction type unit and is fitted with the patented GARRARD governor to insure perfect regularity.

The 201-V is equipped with Speed Regulator by means of which a wide range of speeds is possible—as well as perfect adjustment at 33-1/3 or 78 rpm. This regulator is on an extension arm so that 16″ records can be speed-controlled.

TRI-O-MATIC

The new **V-M Model 4060** Tri-O-Matic AUTOMATICALLY plays all records, all sizes, all speeds. While "Automatic Operation for all records" is the outstanding sales feature, from a practical standpoint the many record protecting features are equally important. Records are LOWERED—NOT DROPPED—on the Spindle Shelf. There is no wobbling down the spindle—no slap or scrape—no possibility of the tiny microscopic grooves of the new type records being damaged in any way.

Controls are simple and located at the front, easily accessible in any installation. All moving parts in Tri-O-Matic Changers are factory-adjusted—riveted or pinned in adjustment—insuring years of trouble-free performance. Actually, only two adjustments are ever needed—needle height and setdown—and both are accessible from above the base plate.

It has an exceptional amplifying system and a "jam-proof" and "child-proof" changer of simple design. The Tri-O-Speed Portable plays 10″ and 12″ 33⅓ and 78 rpm. records AUTOMATICALLY, and 7″ 45 and 33⅓ rpm. records manually. AN AUDIODISC FOR EVERY RECORDING NEED

RED LABEL AUDIODISCS are standard throughout the recording profession exceeding the professional demands of broadcasting stations, sound and movie studios and other exacting applications when top quality and dependability are essential requirements. Their many exclusive features have given new meaning to high fidelity recording and life-like reproduction. They are the finest discs obtainable.

SINGLE FACE RED LABEL AUDIODISCS have exactly the same fine qualities as standard Red Label and bring real economy to applications requiring but one side. Both sides are coated with the recordable side identified with embossed label.

REFERENCE LABEL AUDIODISCS are especially adapted for making test cuts, filing and reference recordings, auditions and equipment adjustments. Their unusually low price gives maximum economy.

BLUE LABEL AUDIODISCS offer the very best in recording quality for schools, homes, amateur and demonstration work. Made of exactly the same materials used in the manufacture of professional type Audiodiscs—except on a thinner aluminum base—these discs have brilliant tone, long-playing life, no audible needle scratch and are of consistent quality.

MASTER AUDIODISCS are the outstanding choice where copies of recordings (pressings) are to be made by the electroplating process. The excellence and consistent quality of these discs are well known to all record processors.

AUDIODISC NEW YORK U.S.A.

. . . they speak for themselves audiodiscs

PROPERTIES THAT MAKE FOR AUDIODISC LEADERSHIP

UNIFORM COATING

Audiodiscs' exclusive machine process produces a smooth flat coating seven thousandths of an inch thick, free from swirls, waves and "orange peel" effect. The depth of the coating is consistent within one-half thousandth of an inch.

LONGER STYLUS LIFE

The homogeneous coating is free from microscopic abrasive materials and surface imperfection which, in inferior discs, damage cutting points and cause extraneous noises in playback.

SILENT BACKGROUND

Audiodiscs, cut under good recording conditions, are entirely free from audible "background scratch."

LONG PLAYBACK LIFE

With correct playing equipment an Audiodisc can be played for more than a hundred times with no noticeable increase in surface noise.

BRILLIANT FREQUENCY RESPONSE

These discs are noted for their brilliant high frequency response. Audiodiscs "speak for themselves" with quality performance that pleases the most critical recordist.

NO DETERIORATION WITH AGE

A special curing process removes from Audiodiscs the last trace of volatile constituents. Discs made over six years ago still cut easily and play back perfectly.

CONSISTENT QUALITY

Audiodiscs are manufactured by a unique automatic precision-machine process which assures consistent quality. This uniformity is a feature that helps engineer and amateur attain the highest degree of recording excellence.

GENERAL NOTE:

All Audiodiscs are manufactured on aluminum base. Red Label discs are embossed, Yellow and Reference discs have paper labels—Master Audiodiscs have no labels. All Audiodiscs have center-pin holes and three drive-pin holes except Master discs, which have one drive-pin hole. Lint-free envelopes are supplied in the packages of Red Label and Master discs. Other discs are packaged in their envelopes.

audiopoints

Made by skilled craftsmen and conveniently packaged in cards, boxes or envelopes, Audiopoints are available in four types of recording styli and four types of playback points. Recording and playback Audiopoints for microgroove are also available.

HOW TO
MAKE GOOD
RECORDINGS

AUDIODISC CHIP-CHASER

When making a disc recording with outside-in feed, it is necessary to have some way of brushing the thread out of the way of the stylus. The AUDIODISC Chip-Chaser is a perfect solution to this problem. It has a heavy base which is placed beside the turntable and requires no fastening down or adjusting. The Chip-Chaser automatically and infallibly brushes the thread toward the center, winding it up on the overhead post or drive pins, as the case may be. Available in two sizes: for 16" turntables and up to 12" turntables. List prices $6.25 and $5.00.

The WR-39A is a marker signal generator, a dual crystal standard, and a heterodyne frequency meter with built-in audio amplifier and speaker. The marker VFO operates on fundamentals, and produces strong marker pips on scope traces anywhere within its specified freqeuncy ranges. For regular signal-generator and calibrator applications, the VFO also can be used on second-harmonic frequencies, thus giving continuous coverage from 19 mc to 480 mc. For stagger-tuned alignment work, the VFO can be amplitude-modulated by an audio oscillator. This crystal combination will calibrate any signal source over the range of 250 kc to 480 mc. Unit is complete with signal injection cable. Shipping weight, 15 lbs. Sugg'd User Price: **$250.00**

Horizontal Sweep:
Phase Range: 0-160°; Frequency: 60 cps; Amplitude: 5.6 peak-to-peak volts
Dimensions.....................10" x 13½" x 7½"

WR-59A is a frequency-modulated sweep-alignment generator. It generates signals of fundamental frequency on all ranges, except video, Pix 5-15, and Pix 20-30 which are beat frequency (on these bands, band-pass filters are used) which are preset for speed and accuracy. The ranges include all 13 TV rf channels, picture and sound IF, video, prewar pix IF, the standard FM intermediate, and a spare 25-40 Mc channel. Sweep width is continuously variable, and output level is flat within 1 db in all positions. The output will match balanced or unbalanced lines, and is variable over wide limits by means of an elaborate piston attenuator. The unit develops a sweep frequency signal for a scope, and phasing control is provided. An additional feature is return-trace blanking which produces a zero-reference line on the cathode-ray tube. The unit is complete with rf and if/rf output cables. Shipping weight, 20 lbs. Sugg'd User Price: **$325.00**

These small panel instruments are particularly suitable for use in radio and other communications equipment where compactness, especially minimum depth behind the panel, is essential. Thinness is obtained by the use of a unique single-unit, high-torque element of the permanent-magnet, moving-coil type. In this element, the pivots, instead of being secured to the outside of the armature winding, are solidly mounted on the **inside** of the armature shell.

G-E internal-pivot instruments are available in a variety of standard ratings to measure direct current and voltage (Type DW-51), and radio-frequency current (Type DW-52). They are of the 2½-inch classification. The behind the panel depth is 0.89 inch of the molded Textolite case.

OTHER TYPES

Many other types of G-E indicating instruments are available for panel mounting. They include 3½ inch a-c, d-c, r-f, and rectifier types in standard round cases as well as in rectangular cases, such as the one shown below. Also 2½-inch alternating-current and rectifier type instruments. Still other types can be supplied to meet unusual requirements.

These instruments can be used on single phase A. C. or D. C. as Wattmeters. On special order they can be made up as voltmeters or ammeters. Instruments are self-contained to 300 Volts—10 Amperes. Over that external connection can be made. For use on frequencies up to 133 cycles per second. Available in three-inch model 361. Case dimensions same as 321-T, except for depth, 2" back of the flange (2$\frac{15}{16}$" over studs). Wattmeters can be combined in the Triplett Twin case with a voltmeter or Ammeter. Accuracy within ±2%. Standard ranges as follows:

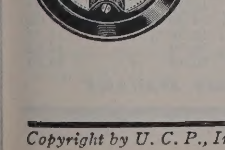
SENSITIVE RELAYS

Highly sensitive Triplett relays are of the D'Arsonval Moving Coil type, carefully designed to give dependable, satisfactory performance. Since relays cover such a wide field and most of them are made to special order, no standard models are listed. Each application should be accompanied with information specifying maximum and minimum currents and voltages which will pass through relay coil and contact points, etc.

R.F. AMMETERS



Triplett R. F. Ammeters are the same case size and appearance as corresponding D. C. Models. Internal couples normally furnished at prices shown. If external couples are required, please specify on order, adding $3.70 net to price of instruments listed below. External couples only (less meter), with 2 ft. leads are $4.70 net each.

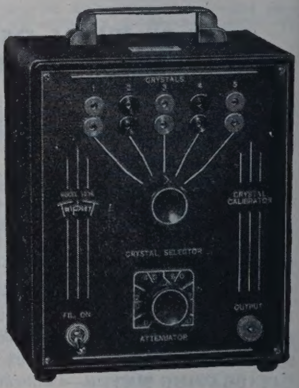
Model 1236 provides Marker frequencies of crystal controlled accuracy for TV & FM, IF or RF requirements. By purchasing ONLY those crystals needed for a particular TV service area and the most-used IF frequencies, this new unit provides utmost Marker accuracy and offers a speedy selection of the desired crystal-controlled signal.



Model 1236

This Marker saves plenty of time in checking bandpass characteristics of curves — simply throw the switch to the desired crystal — eliminating delays resulting from constant tuning and retuning required in the use of variable markers. Signals for the most accurate and fastest means of aligning local oscillators in TV receivers and many other applications. When using a 1 MC crystal, Model 1236 becomes a standard for checking other signal generators or receivers.

Designed as a companion unit to Triplett 3435, it receives its power by plugging into a panel jack in the Sweep Generator.

Attenuation—Low impedance single control T-pad attenuator, continuously variable. Shielding—Copper plated steel construction throughout. Stability—Increased by use of latest high-frequency techniques.

INSTRUMENTS THAT STAY ACCURATE

MODEL 260

Set Tester

World's Most Popular High Sensitivity Set Tester For Radio and TELEVISION

There are more Simpson 260 high sensitivity volt-ohm-milliammeters in use today than all others combined. No other instrument of its kind has approached the world-wide popularity of the Simpson 260. In no other tester of its kind will you find the combination of useful ranges, accuracy, ruggedness, beauty and sensitivity developed to such a high degree of perfection.

Removal of the Model 260 from its heavy, handsome case of molded bakelite, will disclose how it differs from most set testers. You will see a sub-panel with a score of small recesses each holding a separate resistor or other component. You will notice complete absence of cable wiring. All connections are short and direct, thus offering a strength and firmness of assembly and the finest of insulation to reduce chances of shorts. All components are readily accessible. The front panel is a thing of beauty and long life. Pin jacks are recessed so no metal parts are exposed. All figures and symbols are molded into a heavy Bakelite panel and filled with durable white for long wear and legibility.

At 20,000 ohms per volt the 260 is highly dependable, rugged and accurate. Its practically negligible current consumption assures remarkably accurate voltage readings. It provides DC current readings as low as 2 microamperes and up to 10 amperes. Dependable resistance readings can be made up to 20 megohms and as low as 1/5 ohm. With the 260 you can measure automatic frequency control diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, high-mu triode plate voltage, as well as a wide range of other measurements which cannot be checked with ordinary servicing instruments.

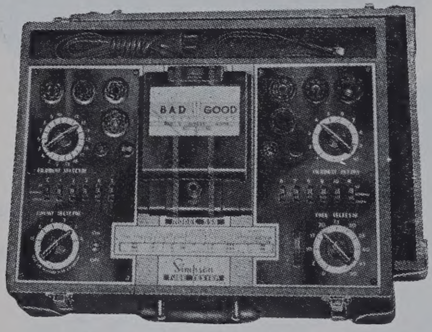
MODEL 330 Mutual Conductance Tube Tester

With Simpson Patented "No Backlash" Roll Chart

The Simpson Model 330 tests tubes in terms of PERCENTAGE of rated DYNAMIC MUTUAL CONDUCTANCE, a direct indication of tube performance with reference to the manufacturer's STANDARD MICRO-MHO rating. The colored zones on the dial coincide with the percentage scale to indicate good, fair, weak or definitely bad tubes. Tubes are tested at audio frequency (2500 cycles) with voltages applied automatically over the entire operating range, reproducing more completely than ever before the actual conditions, under which a tube normally functions. A compact assembly of ten push button switches and nine rotary switches of six positions each provide infinite combinations for tube circuit selection.

When you have finished a tube test, the Simpson one button automatic reset returns all switches to the normal position.



For 100-130 volts, 50-60 cycles.

THE SIMPSON PATENTED "NO BACKLASH" ROLL CHART

The exclusive "No-Backlash" feature automatically takes up the slack in the paper chart and, by keeping the chart in constant tension, makes it impossible to turn the selector wheel without moving the chart. This results in precision selection at all times. The "No-Backlash" feature also prevents the paper chart from tearing, insures proper alignment, and presents at all times a neat, flat surface.

The selector wheel gear ratio makes it possible for tube selections to be obtained with a minimum of effort.

The entire Roll Chart mechanism is securely fastened to the instrument panel. Quick access to the roll chart can be obtained by removing four panel screws, so that the addition of tube data or the mounting of a new chart is a matter of a few minutes.

In addition to the neat, flat reading surface made possible by the "No-Backlash" feature, the lucite window was designed so that only two settings appear, which is especially convenient for the settings of multi-purpose tubes.

Note These Many Features

1. Direct reading dial with continuous coverage from 75 Kilocycles to 130 Megacycles in the following ranges: 75-200; 200-600; 550-1800 Kilocycles and 1.7-4.2; 5-16.51; 16-32; 31-65; 62-130 Megacycles. Fundamental to 65 MC.
2. Practically independent of line voltage fluctuation. Calibration is stable regardless of wide variations in line voltage.
3. RF output is controlled through its entire range, eliminating the necessity of a separate connection for high uncontrolled output as found in other signal generators.
4. Modulation from 0 to 100%, using either the 400 cycle internal sine wave or an external source. A range from 0 to over 9 volts of 400 cycle sine wave is available for external use.
5. Modulation up to 100% from below 60 cycles per second to over 10 Kilocycles per second.
6. Each Signal Generator is individually calibrated against a crystal controlled frequency standard.

PANEL — Lustrous black anodized aluminum. Dial is encased in a molded bakelite escutcheon with glass covering for protection against damage and dirt. Functional switches and controls are mounted on engraved molded bakelite panels.

CASE — Steel, copper plated for shielding effect and finished in gray durable wrinkled enamel. Leather carrying handle.

SHIELDING — In addition to the overall shielding offered by the case and panel, the coils and tuning condenser are individually shielded, and an additional shield is placed over these two assemblies. This series of shields together with other factors reduce leakage to an absolute minimum.

COILS — Low loss RF coils are individually calibrated by means of variable inductance and variable minimum capacitance. These adjustments provide the means for greatest possible accuracy in calibration.

BAND SELECTOR — The rotating turret coil assembly permits the use of the shortest possible wiring, resulting in minimum circuit capacitance and permits quick selection of any frequency range.

CONDENSER — A two section tuning condenser using either one section or the other provides for ideal inductance to capacity ratio on all bands. Smooth vernier tuning permits accurate adjustment of the selected frequency.

MODEL 340 SIGNAL GENERATOR

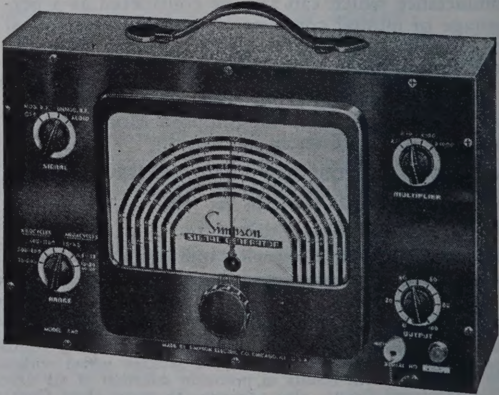
75 Kilocycles to 120 Megacycles—fundamentals to 30 Megacycles. From its lustrous black anodized panel to the big nine-inch dial and knife edge pointer that mean easy readability, the Model 340 is an instrument packed with Simpson engineering refinements for greatest utility and long-lasting accuracy.

An electron coupled circuit, using three tubes—full wave rectifier, modulator, and oscillator — and standard 30% modulation at 400 cycles, assures extreme stability and output uniformity. Close settings are permitted by a smooth vernier control.

RF coils provide range of 75-220; 200-600; 550-1700 KC; and 1.5-4.5, 4.2-14; 9-30; 36-120 megacycles. Fundamentals range to 30 MC, and the dial is direct reading to 120 MC.

Shielding in the Model 340 is complete; coils, attenuator, and signal selector being individually shielded. The oscillator and modulator are sealed in a rigidly welded, entirely closed chassis. In addition, the line cord is shielded, thus reducing leakage to a negligible point.

The signal output is controlled through a step attenuator and non-inductive potentiometer, providing smooth and complete control of the signal output. A special jack is provided in the Model 340 to obtain high output on the 120 MC band.



For 105-130 volts, 50-60 cycles.

MODEL 266 VACUUM TUBE VOLTMETER

Simpson
VACUUM TUBE VOLTMETER
MODEL 266

Extremely accurate and packed full of important features. This fine Simpson instrument offers a 1 volt range for the full scale deflection necessary in measuring low RF voltages; a zero center switch embracing all DC voltage ranges for discriminator circuit alignment; a special probe with low input capacitance of approximately 4 micro-microfarads for checking RF voltages.

DC volt input resistance ranges from 50 to 200 megohms; AC volt input impedance at 60 cycles is approximately 10 megohms. The primary of the power transformer is well-regulated—holding close control over filament as well as plate voltage, and the DC input circuit is filtered so that the pressure of superimposed alternating currents does not affect DC measurements.

Housed in a sturdy case of attractive hardwood. The shining silver and black anodized aluminum panel includes a convenient well for holding the AC probe. In addition, there is a large, clearly marked 4½" meter for quick, easy readings, and a compartment in the rear of the case for leads.

INSTRUMENTS THAT STAY ACCURATE

MODELS 240 and 230 VOLT-OHM-MILLIAMMETERS

These two "Micro-Tester" portables are famous throughout the world for their ruggedness and built-in accuracy. They exemplify the construction features and utility that distinguish the entire Simpson line shown in this section.

Both are shock-proof and incorporate the celebrated Simpson movement with its FULL BRIDGE-TYPE CONSTRUCTION AND SOFT IRON POLE PIECES. Resistors are in matched pairs to provide the greatest possible accuracy for all ranges.

Model 240 — the "Hammeter" — was designed for the additional voltage and sensitivity demanded in radio testing. With its maximum voltage range of 3000 AC or DC, it was the first self-contained pocket portable instrument built expressly to check high voltage and all the component parts of transmitters and receivers.

Model 230, with a maximum voltage of 1000 volts AC or DC, is ideal for most industrial testing. Its ranges are adequate for most line voltages, for telephone, teletype, and general purpose testing.

Both models are housed in heavily molded bakelite cases, with all numbers and symbols recessed in the panel and filled with white enamel for greatest legibility and ease of reading. Both have full size 3" meters.

MODEL 378

SIMPSON MODEL 390 VOLT-AMP-WATTMETER

Ruggedly constructed for full load, continuous operation, the Simpson Model 390 is the first tester of its size ever made to give you volt, ampere and wattage readings in one compact instrument. It embraces two ranges each of voltage and current, providing four wattage ranges which cover practically all types and makes of appliances. The panel has volt-ampere combinations clearly indexed to the proper wattage range on the scale, which makes the instrument easy to use. All readings are shown on one meter. In normal position, the meter indicates volts. Ampere and watt readings are obtained by depressing button on the panel. The widely separated binding posts make it possible for the Model 390 to be used as an individual voltmeter or as an ammeter. The Model 390 has a molded bakelite case with all figures recessed in the panel, which are filled with white enamel for better legibility.

SIMPSON AC-DC VOLT-WATTMETERS MODELS 391 and 392

Designed for simultaneous reading of volts and watts, each of these handy little testers has two separate 3″ square meters, one for volts and one for watts. Each has a built-in cord and plug for connection to the line outlet, and a receptacle for connecting the appliance under test. The ranges for each meter are selected by separate toggle switches recessed in the molded bakelite case. The low power consumption combined with the high efficiency of these instruments results in negligible loss and error in reading.

MODEL 385 TEMPERATURE INDICATOR

This is the newest addition to the Simpson Appliance Tester line. You will find this a compact instrument which is ideal for measuring temperatures from +70° F to as low as —50° F, where fast accurate temperature readings are important. The scale is designed so that the center portion is expanded, making the most widely used temperatures easy to read. The Model 385 is ideal for use in the refrigeration service field and wherever temperature readings are important, such as deep freeze units, home refrigerators, walk-in coolers and air conditioning units. The temperature readings can be taken at the end of the 15′ lead which is supplied with the unit. The lead cord is small in diameter, making it possible to close the door of the equipment, thus obtaining temperature indications under actual conditions.

The probe can also be immersed in liquids where critical temperatures must be maintained.

Range: —50° to +70° F.

SIMPSON MODEL 221

ROTO RANGER

(High Sensitivity AC-DC Volt-Ohm-Milliammeter)

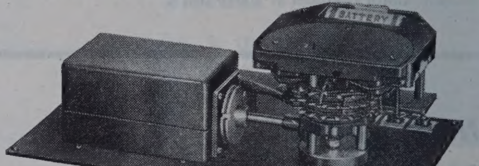
Twenty-five separate meters at the turn of a switch. That is what you get in the new Simpson Model 221 Roto Ranger. The necessity of reading numerous scales, so common in ordinary volt-ohm-milliammeters, is forever eliminated when you own a Roto Ranger. The chances for errors in making readings are reduced to a minimum. The Model 221 provides a separate direct reading scale for each range and does it automatically. Calibrations are not cramped. Each scale is full size, the same as it would be for a separate instrument. As the selector switch on the panel is moved to the range desired, an ingenious mechanism rotates the proper range into position behind the meter window.

The Model 221 has a direct current sensitivity of 20,000 ohms per volt and is ideal for research and experimental work where correct readings, quickly obtained, are essential. It is also ideal for critical industrial applications, where reading errors may result in costly material spoilage or serious production errors. In addition the Roto Ranger is the modern and final answer for the radio, radar, television and X-ray technician who must trouble shoot speedily and accurately. It is Simpson patented.

With this super-sensitive instrument you can measure automatic frequency control diode balancing circuits, grid currents of oscillator tubes and power tubes, bias of power detectors, automatic volume control diode currents, rectified radio frequency current, high-mu triode plate voltage and a wide range of unusual conditions which cannot be checked by ordinary servicing instruments.

The panel is of brilliantly gleaming black anodized aluminum; ranges and other markings are in the shining silver finish of the natural aluminum base. The case is of sturdy wood construction, leatherette covered, with heavy black bakelite handle, and includes a handy compartment for leads. Slip hinges on the cover permit quick removal.

INSIDE THE ROTO RANGER



Your first glance behind the panel of the Roto Ranger will show you an instrument that is radically different. The maze of wires common to most test instruments is gone—replaced by two clean housings. One is a bakelite box containing the drum that holds the range scales and the meter movement, the other the bakelite sub-panel of the meter circuit. Bakelite is used for the drum housing because it provides high insulation qualities for the meter and protection to the fine drum mechanism.

Model 221 has been carefully designed throughout to provide strength and simplicity of assembly, and the consequent accessibility of components. Molded of sturdiest bakelite, it possesses the requisite number of tiny recesses to provide separate pockets for resistors. This separation of resistors means orderly assembly, highest possible accessibility, and added insulation for preventing shorts; all connections are short and direct, eliminating the need for cable wiring. Each battery has a compartment of its own and is easily reached for replacement. These are refinements typical of Simpson manufacture, refinements that have made Simpson instruments finer than any similar instruments on the market.

The variable oscillator sections are mounted one on each side of the oscilloscope section and are provided with large precision vernier dials having a 20:1 ratio and 1000 division logging scales. They are easy to read and can be quickly set for to an exact frequency.

Modern FM and TV development and servicing requires the use of test equipment made to exacting standards. With this in mind we offer you the Genescope with the assurance that everything possible has been done to make it the most accurate, flexible and convenient instrument available.

There are many vital component parts in the Genescope, almost all of which have been made to our exacting standards within our own modern plants. Most of these vital components have been developed and designed by us and substantial sums have been spent on modern tooling. The care we have taken to properly design and produce these parts is worthwhile assurance that the Genescope will render many years of uninterrupted service and always produce accurate results.

The center section of the Genescope contains the oscilloscope and all associated controls. The cathode ray tube of the oscilloscope is mounted vertically in the case in order to conserve bench space. The pattern on the tube is brought into view by use of a highly polished adjustable mirror at the top of the cabinet. The mirror may be quickly adjusted for any position of the operator. The tube face is placed well below the top surface of the cabinet in order to shield it from incident light thus producing a clear, sharp image unhampered by narrow angle light shields. The mirror when closed provides adequate protection for the cathode ray tube when not in use.

Direct connection to vertical and horizontal deflection plates and other internal functions are available through removable cover on the front panel.

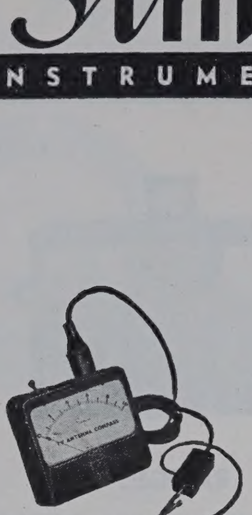
INSTRUMENTS THAT STAY ACCURATE

MODEL 351 TV ANTENNA COMPASS



This valuable instrument is another example of Simpson television pioneering. One man can do a better installation job in less time than it used to take two men.

Model 351 takes the physical form of a ruggedly built pocket-size meter which connects by a simple insulation-piercing alligator clip to the video input of the cathode ray tube in the television receiver.

By an extension cord, it is carried to the antenna site. With a test pattern tuned in on the area's weakest station, the antenna is simply located and rotated for maximum deflection of the TV Antenna Compass. It is as simple as that. Identifies ghosts, too. And much more accurate than trusting to the old fashioned "human eye-and-headphones" method of shouting instructions back and forth from the living room to the roof—which has always resulted in only an approximate best orientation of the antenna. Can also be used to peak the RF mixer and oscillator sections. In that way you actually peak the set right on the station itself.

The Model 900-B Volt-Amp-Wattmeter has been designed for all A.C. appliance-testing, from bell transformers and clocks to electric ranges operating on the 220-volt three-wire Edison system. The extremely low range of 0-20 watts will measure the power consumed by the smallest of appliances and is protected from accidental overload by a fuse. For measuring electric ranges the Number 9A and 9B special leads are available with standard three-wire range connnctors. It tests appliances while in actual operation, indicating wattage consumption, amperes, and line voltage.

Mounted in a durable welded steel case with strap handle and rubber bumpers. Detachable leads, for small appliances, are furnished. Test leads with prods also included.

Service men will find a wattmeter especially handy for checking all A.C. sets.

Part No. C-105—This external current transformer is designed to give ranges of 5,000 and 10,000 watts and 65 and 130 amperes when used with Model 900-B. Part No. C-105 transformer may be installed in lead compartment of carrying case. When transformer and carrying case are ordered together, transformer will be installed before shipping.

Model 900-B—Size: 9½″ high, 6¼″ wide, 3″ deep.
Shipping Weight: 8½ lbs.—Net 6½ lbs.

IMPORTANT—How To Order:

For all standard models, give: (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS(Z)

Zero Adjusters are available only on Models 550-DC and 650-DC. No zero adjuster on Model 950. When ordering, add Z to stock number. Example: Stock number for Model 550-DC voltmeter, 0-1 volt range—**without zero adjuster is 5101. With zero adjuster, it is 5101-Z.**

PANEL CALIBRATION(S)

Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add-S to stock number when ordering, as 5101-S. If thickness of panel is not specified, meter will be supplied for .040 panel.

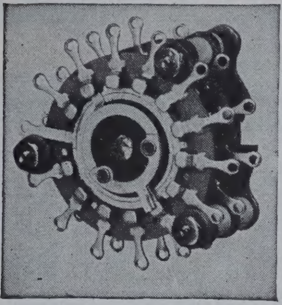
INSTRUMENT AND TESTER SWITCHES (LAMINATED)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting*



SS-14-2

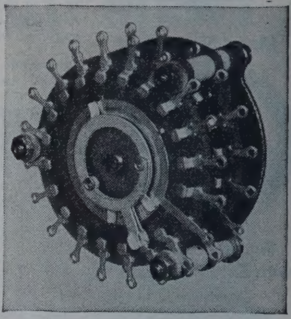
The switch that's IN LAST PLACE on the trouble-shooter's check list . . . AND PROUD OF IT!

J-B-T Instrument Type Rotary Selector Switches were designed and developed to meet the need for trouble-free, dependable performance in hard service. These superior switches are used extensively in high quality test equipment, portable instruments, inspection setups and experimental circuits. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability—Rigid, 3-post deck suspension, instead of the usual 2; all parts heavily coin silver plated to meet 200 hour salt spray test; ball bearing action, beryllium-copper spring, and special design detent wheel assure positive indexing. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Additional decks require only 5/16" spacing per section.



SS-20-2

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—Normal make-and-break with resistance load, 25 Ma. at 300 volts AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

* Standard items, but not regularly stocked; check with your distributor.

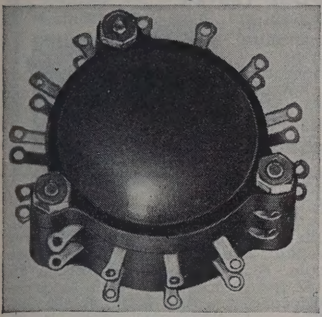
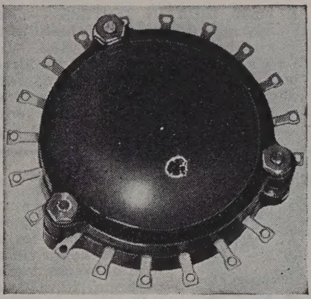
BRAND NEW! MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting*



MS-14-2

- **All moving contacts enclosed — eliminates dirt and corrosion.**
- **Contact lugs permanently integrated into switch assembly.**
- **Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft through decks for precision indexing.**
- **Interchangeable, electrically and mechanically, with J-B-T 14- and 20-position laminated switches, widely used by industry and Armed Services.**



MS-20-1

FEATURES:

For description of rigid 3-post construction; heavy coin silver plating to meet 200-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; current-carrying capacity and voltage breakdown, see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2" circle for compactness. **Molded end cover** regularly supplied on MS-14 series. **Knob** included with individually boxed units — not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. **One to six decks** add $\frac{5}{16}$" per deck (or gang) to depth; for special orders beyond six decks indexing mechanisms at top and bottom of switch are recommended, adding 1" extra to over-all depth. **Continuous rotation type** supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. **Panel locator** is available on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in $2\frac{23}{32}$" circle for compactness. **Molded end cover** regularly supplied. **Knob** included with individually boxed units — not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms and self-wiping collector ring are standard construction. **One to six decks;** add $\frac{5}{16}$" per deck (or gang) to depth. **Continuous rotation type** supplied; on quantity orders, pre-set fixed stops are available. **Panel locator** available on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

VIBRATING REED FREQUENCY METERS (PATENTED)

J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards in central stations and industrial plants—wherever constant or known frequency is important to efficient operation of equipment.

PRINCIPLE OF OPERATION:

Simple in design, the J-B-T Meter consists of a case, base, dial and central mounting frame, with a series of spring steel reeds screwed to a reed mounting bar, individual driving coil surrounding each bank of reeds, permanent magnet, series resistor and terminal studs.

Each reed is adjusted to respond by resonance to but one frequency. As the alternating current (or interrupted direct current) excites the driving coil, the one reed "in tune" with the frequency in the coils will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. Frequency of the current is read on the graduated face of the instrument.

ADVANTAGES:

Some standard models are available in either half cycle or full cycle steps, as shown below on two meters indicating a frequency of 60 cycles.

Both response patterns are extremely easy to read. In the half-cycle instrument the response is broad; in the full-cycle instrument the response is sharp.

Guaranteed accuracy of ±0.3% or better of the frequency being measured, depending on the model. High fatigue safety factor for continuous operation, and outstanding temperature stability. Temperature compensators are not required.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. Accuracy is not affected by wave form or external magnetic fields. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.

CAUTION:

If a meter plugged in on a 60 cycle AC power line does not indicate a frequency of exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions beyond the control of Utility. All J-B-T Vibrating Reed Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply.

VACUUM TUBE FREQUENCY METERS

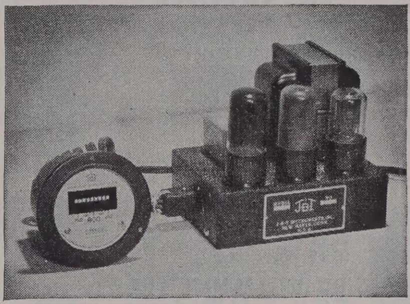
(PATENTS PENDING)

PRINCIPLES OF OPERATION: J-B-T Models 33-VTF and 39-VTF Vacuum Tube Frequency Meters provide the maximum degree of accuracy in measuring frequencies located within definite bands. A multi-vibrator circuit in the electronic unit divides the incoming frequency by two, three or higher integers, then measures resultant frequency on a reed instrument.

WHERE USED: These models are especially useful for checking audio-oscillators, frequency converters, radar equipment, and for standardizing less accurate frequency measuring units.

ADVANTAGES: **Extreme Accuracy:** Within ±0.25% for any indicated frequency. **Permanent Accuracy:** Calibrated at factory — no subsequent calibration or standardization required. **Temperature Drift Eliminated:** No initial stabilization period required. **Burn-Out Proof:** No protection needed against accidental frequencies above the range being measured. **Few Controls:** No complicated operation. **Stability of Circuit:** Accuracy of reading is independent of line voltage variation. No voltage regulator, external or internal, is required.

MODEL 33-VTF, FIELD TYPE



Model 33-VTF with cover removed. Vacuum tube unit attaches to rear of panel, meter is flush.

Frequency ranges: 380-420 cycles; 760-840 cycles; 1140-1260 cycles; available singly or in combination. (See Model 33-F for single range 380-420 cycle meters). Voltage range: 100-130 volts. Power to operate the units is obtained from an inverter or other source of frequency being measured. Power consumption: approximately 20 watts. This model requires no power supply other than the source whose frequency is being checked. Input impedance: approximately 650 ohms. Tubes used: 1—6N7-GT/G multi-vibrator; 1—6V6-GT/G amplifier; 1—6X5-GT/G rectifier. Size 4⅝" x 5½" x 6"; weight: approximately 6 lb. Black wrinkle finish. DUMONT Cathode-Ray TUBES ★ OSCILLOGRAPHS ★ EQUIPMENT

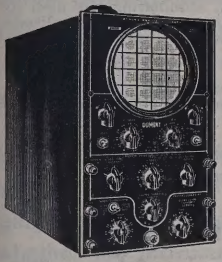
DU MONT TYPE 164-E 3″ CATHODE-RAY OSCILLOGRAPH

★ A compact, portable instrument especially suitable for laboratory, shop, or field work. The 3″ cathode-ray tube operates at an accelerating potential of 1,100 volts, thus providing brilliant, well-defined traces. Both amplifiers have uniform frequency response over their operating range: the single-stage vertical amplifier has a voltage gain of approximately 43; the horizontal amplifier, which serves to amplify either sweep or externally applied signals, has a voltage gain of approximately 55. For added convenience, deflection signals may be applied directly to the cathode-ray tube without removing the cabinet.

CATHODE-RAY OSCILLOGRAPH

DU MONT TYPE 208-B 5″ CATHODE-RAY OSCILLOGRAPH



★ A moderately priced 5″ instrument embodying many recent improvements that facilitate its application to the great majority of laboratory and production requirements. The Type 208-B is furnished with a 5″ intensifier-type, high vacuum tube which operates at an accelerating potential of 1,400 volts, thus insuring trace brilliance. Freedom from origin distortion, sharp focus at all deflecting frequencies, and a high deflection sensitivity that permits the viewing of moderately low-potential signals without the use of amplifiers, are additional features. The wide-band amplifiers provide symmetric deflection, and are direct-coupled to eliminate "electrical backlash" in the position-control circuits.

DU MONT TYPE 224-A 3″ CATHODE-RAY OSCILLOGRAPH

★ The wide-range response of this instrument provides faithful reproduction of all wave-forms with steep fronts and resultant large-harmonic content, thereby permitting the study of signals such as pulses and square waves involving frequency components as high as 5 megacycles. Numerous combinations of signal-input connections at the front panel provide added flexibility and convenience of operation. A special feature is the provision for intensity modulation of the grid of the cathode-ray tube. Included is a test probe with cable shielded to eliminate stray pickup for high-frequency work.

OSCILLOGRAPH
DUMONT

DU MONT TYPE 274-A 5″ CATHODE-RAY OSCILLOGRAPH

★ The Du Mont Type 274-A Cathode-ray Oscillograph was developed as an inexpensive, general-purpose instrument for laboratory, radio service, and educational applications. The Type 274-A serves as an excellent null-indicator on inductance-capacitance bridges, as a means of viewing voltage waveforms, as an output meter, as a means for measuring time and amplitude of pulses, as an indicator in studies of sound, light, electricity, and electronics, and many for other general applications.

THE DU MONT TYPE 241 — CATHODE RAY OSCILLOGRAPH

The Du Mont Type 241, like the Type 224-A is designed as a high frequency oscillograph. Employing a 5-inch cathode ray tube, the Type 241, however, supplies the operator with greater visibility. The frequency response of the vertical amplifier is uniform within 30% to 2 megacycles, and uniform within 50% to 4 megacycles. This wide frequency response allows faithful reproduction of signals which are rich in harmonic content. The sensitivity of the instrument, using the Y-axis amplifier, is 0.07 rms volts per inch. The beam-modulation circuit of the Type 241 is equipped with a Z-axis amplifier. Timing markers may be impressed on the trace by applying an intensity modulation signal, of either polarity, to this amplifier. A shielded, high-impedance input probe insures efficient coupling of the signal to the Y-axis amplifier of this instrument.

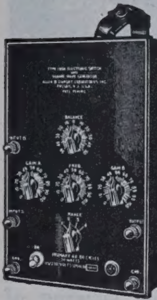
DU MONT TYPE 185-A ELECTRONIC SWITCH



★ The Du Mont Type 185-A Electronic Switch may be used in conjunction with any oscillograph to observe two related or unrelated signals simultaneously on the screen of the cathode-ray tube. The zero axes of the two signals may be displaced for individual study of either pattern. The two patterns may also be superimposed for comparative studies. A typical application is the use of one channel for the signal to be studied while using the second channel for a timing signal.

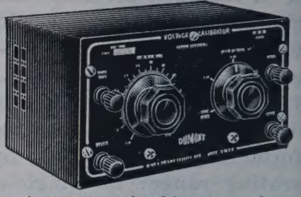
DU MONT TYPE 264-B VOLTAGE CALIBRATOR



★ The Du Mont Type 264-B Voltage Calibrator is designed to measure the peak-to-peak voltage of any signal viewed on a cathode-ray oscillograph. It may be used with any commercial cathode-ray oscillograph. Its square-wave output is continuously variable from 0 to 100 volts in 4 ranges. By throwing a selector switch, the signal to be measured or any of 4 ranges of calibrating voltage is applied to the input of the oscillograph, eliminating the need to switch leads between signal and calibrating voltage. Amplitude measurements of any part of a complex, composite waveform may be made with the Type 264-B.

Range: 0-0.1; 0-1.0; 0-10; 0-100 volts.
Accuracy: ± 5% of full scale on each range.
Input Impedance: 20 $\mu\mu$f (signal connected through calibrator).
Size: 4½" x 8" x 5¾"; wt. 5 lbs.

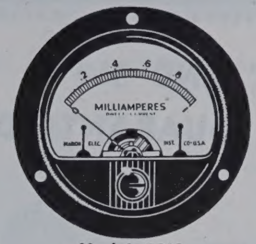
MARION ILLUMINATED DIALS . . . EASILY SEEN! QUICKLY READ!

Marion's new design of instrument-dial illumination insures brilliance without glare. The technique employs a transparent lucite cavity and an especially developed alnico magnet with a reflector shaped front face that concentrates the rays on the warp-free, permanent translucent dial.

This dial illumination feature is available on all, except Marion Glass-To-Metal Truly Hermetically Sealed Meters.



Model 52N

Models 52N and 52S are standard 2½" class instruments, the 52N meeting JAN I-6 physical dimensions for MR 25 round series and the 52S meeting commercial standards for the 2½" rectangular types. These instruments have gained popularity in portable radio equipment, packet test equipment and general electrical service where space is at a premium.

MARION STANDARD INSTRUMENTS

The most important ingredient of Marion design, engineering and construction is simplicity. Our instruments, in special and unusual types as well as conventional models, employ a minimum of parts, each selected for quality and durability. Combined with simplicity of design and engineering, this makes for better performance, under severe conditions, over longer periods of time. Whether your requirements demand custom-built or standard instruments, you can depend upon the functional simplicity of Marion designs to provide the most in service and value.

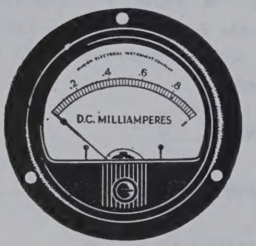
MARION MULTI-RANGE METERTESTER

With self-contained power supply and control equipment for operation on 110 volts, AC, 60 cycles . . . for production testing, and calibration of DC instruments. The MARION METERTESTER is designed with many operational features which will definitely improve the production rates of any meter inspection department. Moreover, its accuracy is such that it may be used for checking purposes in any department and all laboratories employing instruments. It may also be used as a precise source of DC current and voltage. Overall accuracy is better than ½ of 1%. Basic sensitivity of the Mirror Scale Standard Instrument is 10 milliamperes. The complete unit is housed in a hand-rubbed, solid walnut carrying case.

For use in any department and all laboratories where instruments are employed and their performance must be carefully checked.

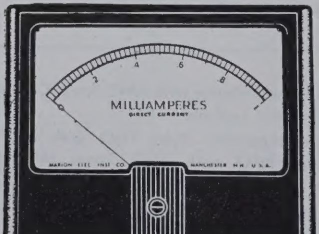
With self-contained power supply and control equipment for operation on 110 volts, AC, 60 cycles . . . for production testing and calibration of DC instruments. No additional accessories are required. Merely connect the two clips to the instrument under test, and proceed to analyze its accuracy and general performance.



Model 53RN

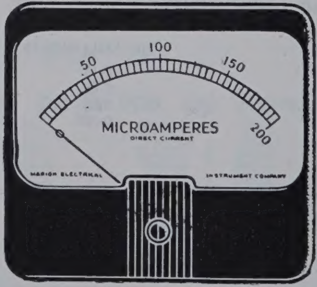
INCLUDES . . .

- Regulated Power Supply.
- Stepless Vacuum Tube Voltage Control.
- Large 8½" Mirror Scale Standard Instrument, Hand Calibrated.
- Decade of .1% Accurate Manganin Wire Wound Resistors.



Model 57S

Model 57S is an 8½" x 7" instrument with a large open face and an extra long scale. It is constructed with enlarged pole shoes, and with a higher torque movement than other Marion types in order to give maximum performance in an instrument of its size. This instrument is supplied with a very high damping factor and is not just an overgrown 3" meter. Overall accuracy of 1%, and can be supplied with mirror scales.
The 57S finds wide application in large vacuum tube voltmeters, in multitesters, and as an easily read production instrument in many of the measuring and testing operations that are performed in any electrical or electronic manufacturing plant. It is commonly used, too, as a production ohm-meter, limit bridge indicator, and in such varied applications as vibration amplitude measurements and automatic tire balancing.



Model 55

Model 55 is a popular test equipment item, having a large case—4⅝" x 4⅛"—and long 100° scale. It is well suited for use in vacuum tube voltmeters, bridges and volt-ohm-milliammeters. The internal construction is identical with that of the 53RN. Can be supplied with mirror scales for special applications.

This dial illumination feature is available on all, except Marion Glass-To-Metal Truly Hermetically Sealed Meters.

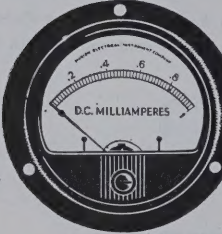
MARION STANDARD INSTRUMENTS

The most important ingredient of Marion design, engineering and construction is simplicity. Our instruments, in special and unusual types as well as conventional models, employ a minimum of parts, each selected for quality and durability. Combined with simplicity of design and engineering, this makes for better performance, under severe conditions, over longer periods of time. Whether your requirements demand custom-built or standard instruments, you can depend upon the functional simplicity of Marion designs to provide the most in service and value.



Model 53RN

METERTESTER

MARION MULTI-RANGE METERTESTER

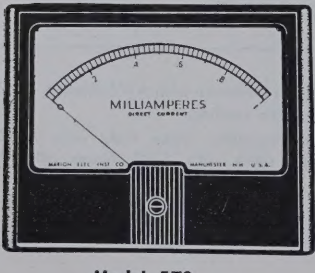
With self-contained power supply and control equipment for operation on 110 volts, AC, 60 cycles . . . for production testing, and calibration of DC instruments. The MARION METERTESTER is designed with many operational features which will definitely improve the production rates of any meter inspection department. Moreover, its accuracy is such that it may be used for checking purposes in any department and all laboratories employing instruments. It may also be used as a precise source of DC current and voltage. Overall accuracy is better than ½ of 1%. Basic sensitivity of the Mirror Scale Standard Instrument is 10 milliamperes. The complete unit is housed in a hand-rubbed, solid walnut carrying case.

For use in any department and all laboratories where instruments are employed and their performance must be carefully checked.

With self-contained power supply and control equipment for operation on 110 volts, AC, 60 cycles . . . for production testing and calibration of DC instruments. No additional accessories are required. Merely connect the two clips to the instrument under test, and proceed to analyze its accuracy and general performance.

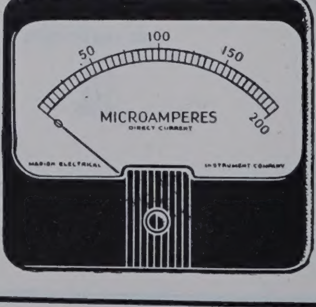
INCLUDES . . .

- Regulated Power Supply.
- Stepless Vacuum Tube Voltage Control.
- Large 8½" Mirror Scale Standard Instrument, Hand Calibrated.
- Decade of .1% Accurate Manganin Wire Wound Resistors.



Model 57S

Model 57S is an 8½" x 7" instrument with a large open face and an extra long scale. It is constructed with enlarged pole shoes, and with a higher torque movement than other Marion types in order to give maximum performance in an instrument of its size. This instrument is supplied with a very high damping factor and is not just an overgrown 3" meter. Overall accuracy of 1%, and can be supplied with mirror scales.
The 57S finds wide application in large vacuum tube voltmeters, in multitesters, and as an easily read production instrument in many of the measuring and testing operations that are performed in any electrical or electronic manufacturing plant. It is commonly used, too, as a production ohm-meter, limit bridge indicator, and in such varied applications as vibration amplitude measurements and automative tire balancing.



Model 55

Model 55 is a popular test equipment item, having a large case—4⅝" x 4⅛"—and long 100° scale. It is well suited for use in vacuum tube voltmeters, bridges and volt - ohm - milliammeters. The internal construction is identical with that of the 53RN. Can be supplied with mirror scales for special applications.

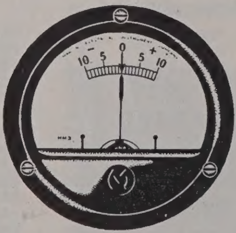
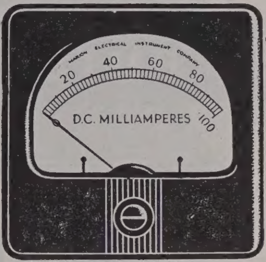
Model 56—6½"

Model 56 is a 6½" x 5¼" bakelite cased instrument of entirely new design with heavy cross sections to stand the most rugged use. It fills the need for an instrument between Models 55 and 57S which are 5 and 8 inch meters. It has a 100°, 5½ inch arc and a large open face readily adaptable to multi arc dials. Supplied with large Alnico II magnets in milliammeter ranges and Alnico V in the more sensitive microammeter ranges. Employs a Marion Bulldozer bracket which assures rugged construction and long, dependable service. Ideal for equipment which needs a large dial easily read from a distance or with plenty of space for a multi-range scale.



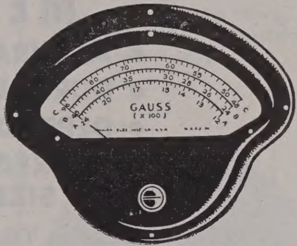
NULL INDICATORS

Marion Null Indicators are extremely sensitive shaded pole piece D'Arsonval type galvanometers. They are used primarily as bridge and potentiometer balance indicators and in any application where an instrument with very high sensitivity about the zero or balance point is desired. We particularly recommend Types HM2 and HM3 because they are hermetically sealed instruments which completely shield the galvanometers from the effects of moisture and dirt, and external factors. Ideal for use in discriminator alignment of FM receivers and as general laboratory balance indicators.



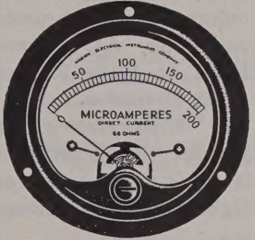
Model 53SN

Models 53RN and 53SN are standard 3½" class instruments, the 53RN meeting JAN I-6 physical dimensions for MR 35 round series and the 53SN meeting commercial standards for the 3½" rectangular types. Application include radio and electrical test equipment, radio, radar, telegraph and telephone switchboards and general laboratory usage.



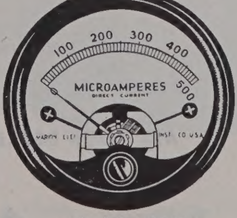
Model MC1—4"

Model MCI features the rugged Alnico construction of the Types 53RN, 54S, 55S, etc., plus the magnetic shielding which a steel case affords. Has a much longer scale than the standard 3½" type. Normal accuracy is 1%, may be ordered to an accuracy of ½%, with hand-marked mirror scales. Every type MCI includes a shatterproof glass window. Applications include finer type of test equipment, switchboards and marine use where great precision and extreme ruggedness are required. Available at prices that are unusually economical for an instrument of this quality.



Model 53R

Model 53R features the sintered soft iron pole shoes, heavy Alnico magnet, and excellent overall accuracy. An enlarged face opening permits inclusion of more information on the scale when used for special applications. Applications include radio and electrical test equipment, radio, radar, telegraph and telephone switchboards, and general laboratory assignments.



Model 52RM

Model 52RM is a narrow flange, brass cased instrument. (The brass case offers R. F. shielding for many applications.) It contains the same rugged Alnico movement and the same scale length that are common to the 52S and the 52N.

STERLING PANEL METERS

AMMETERS, VOLTMETERS, MILLIAMMETERS
FOR USE ON DIRECT AND ALTERNATING CURRENT
A COMPLETE MODERN LINE

These improved STERLING Panel Meters while retaining the accuracy, beauty and ruggedness which have always characterized STERLING instruments, show a modern trend in the gracefully unique arrangement of the broader and more clearly defined scales. The meters for alternating current and direct current are perfectly matched and therefore suitable for mounting on the same panel. Both the A.C. and D.C. meters are of the permanent magnet, iron vane, solenoid type. This affords positiveness of action and breadth of movement suggestive of those of the D'Arsonval type. The large needle-tipped pointers and wide clearly marked scale divisions of these panel meters make them easily read.

STERLING Panel Meters may be had in any of the types illustrated.

SPECIAL COMBINATION A.C.-D.C. METERS WITH HAIR-SPRING REPULSION TYPE MOVEMENT FITTING SAME CASES, ARE ALSO AVAILABLE.

Standard package, 100 meters, Shipping weight 30 lbs.

ALL STERLING Panel Meters are guaranteed accurate within 5%.

Q-METER

TYPE 160-A

Radio frequency circuit design often requires the accurate measurement of Q, inductance, and capacitance values. For this application, the 160-A Q-Meter has become the universal choice of radio and electronic engineers throughout the country.

Each component part and assembly used in the manufacture of this instrument is designed with the utmost care and exactness. Circuit tolerances are held to values attainable only in custom built instruments.

The 160-A Q-Meter is designed specifically for the accurate and rapid measurement of Q, inductance, and capacitance. The basic method of measurement consists of measuring the voltage developed across a variable air capacitor connected as an element in a series resonant circuit. Essentially the Q-Meter is comprised of an 8 range RF oscillator, a Q measuring circuit with a main and vernier section tuning condenser, a vacuum tube voltmeter of special design which reads the voltage across the tuning condenser, and a voltage injection circuit which applies an accurately known voltage to the terminals of the series resonant circuit. In operation the Q circuit is resonated by means of the variable Q tuning capacitor and the voltage developed across this capacitor is indicated by means of the vacuum tube voltmeter which is calibrated directly in terms of Q. This method of measuring Q is simple, accurate, and requires only a single operation—resonating the circuit—to measure Q. Variations of this basic method of measurement are employed to determine effective inductance and capacitance as well as the dielectric properties of insulating materials

SPECIFICATIONS

Oscillator Frequency Range: Continuously variable from 50 kc. to 75 mc. in eight self-contained ranges. (In conjunction with an external oscillator the frequency range of the Type 160-A Q-Meter may be extended from 50 kc. to 1 kc. for coil measurements).

Oscillator Frequency Accuracy: Generally better than ± 1%, except the 50-75 mc. range which is approximately ± 3%.

Range of Q Measurements: The Q voltmeter is calibrated directly in Q, 20-250. The "Multiply-Q-By" meter, which measures the oscillator voltage injected in the Q measuring circuit, is calibrated from x1 to x2 and also at x2.5. The reading of the Q voltmeter scale is multiplied by the setting of the "Multiply-Q-By" meter. Hence, the total range of circuit Q measurements is from 20 to 625. Condensers, dielectrics, etc., which are measured by placing these in parallel with the measuring circuit, may have Q's as high as 5000.

Accuracy of Q Measurements: The accuracy of the direct reading measurement of circuit Q (for Q voltmeter readings between Q=50 and Q=250) is approximately 5% for all frequencies up to the region of 30 mc. and decreases with increasing frequency. Correction may be made for the error above 30 mc. as it is principally a frequency effect. The accuracy of the measurement of condensers, dielectrics, etc. is generally better than 10% for Q's below 5,000 and up to 30 mc.

Capacitance Calibration Range: Main Tuning condenser 30-450 mmf. calibrated in 1 mmf. divisions from 30 to 100 mmf. and in 5 mmf. divisions from 100 to 450 mmf. Vernier condenser, plus 3 mmf., zero, minus 3 mmf., calibrated in 0.1 mmf. divisions.

Accuracy of Capacitance Calibration: Main tuning condenser, generally better than 1% or 1 mmf., whichever is the greater. Vernier tuning condenser, ± 0.1 mmf. The internal inductance of the tuning condenser at the binding posts is approximately .015 microhenry.

Voltmeter: The Q voltmeter is also calibrated in volts. A specially calibrated tube, Type BRC 105-A tube, is used. Replacements may be made without recalibration.

Power Supply: 105-120 volts, 50-60 cycles. Also 210-240 volts, 50-60 cycles. Power consumption 50 watts.

Dimensions: Height 12.5", length 20", depth 8.5".

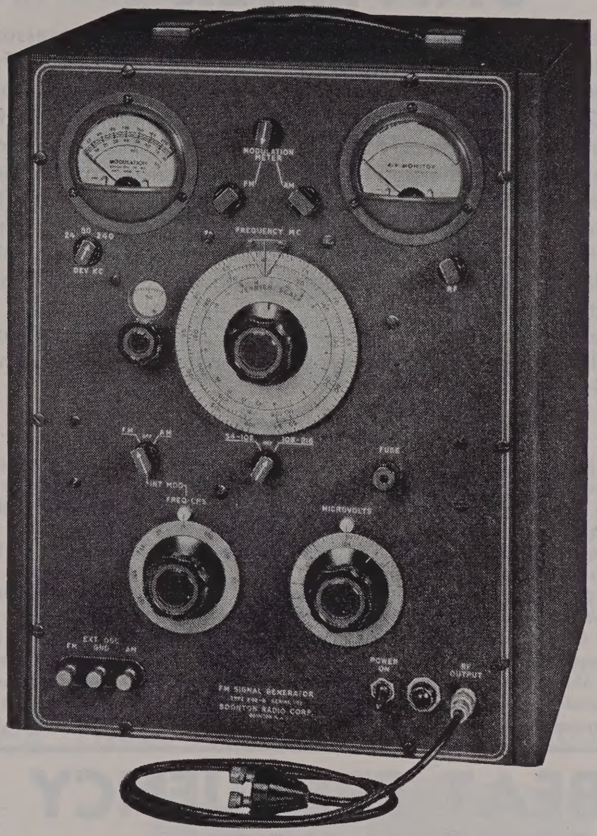
FM SIGNAL GENERATOR

TYPE 202-B



The type 202-B FM Signal Generator has been developed to meet the needs of engineers engaged in the design of FM and television receivers for operation within the frequency range of from 54 megacycles to 216 megacycles.

This instrument has been proportioned for maximum conservation of laboratory bench space, with frequency dial, modulation and output meters positioned at eyelevel for maximum readability. The unit is finished in grey wrinkle enamel with engraved panel and is supplied complete with tubes and standard output cable.

SPECIFICATIONS

RF Range: Frequencies from 54 mc. to 216 mc. are covered in two ranges, 54-108 mc. and 108-216 mc.

Main Frequency Dial: The two RF ranges are calibrated directly in megacycles to an accuracy of within ± 0.5%. The dial is also divided in 24 equal divisions for use with the vernier frequency dial.

Vernier Frequency Dial: The vernier frequency dial is divided in 100 divisions and is geared to the main dial through a gear train having a 24:1 ratio. The approximate frequency change per vernier division is 26 kc. on the low range and 52 kc. on the high range.

Frequency Modulation (Deviation): The FM deviation is continuously variable from zero to 240 kc. The modulation meter is calibrated in three FM ranges (1) zero to 24 kc., (2) zero to 80 kc. and (3) zero to 240 kc. deviation.

Amplitude Modulation: The modulation meter is calibrated at 30% and 50% amplitude modulation. AM is continuously variable from zero to 50%.

Modulation Controls: Separate potentiometers are provided for continuous control of FM and AM levels.

Modulating Oscillator: The internal AF oscillator may be switched to provide either frequency or amplitude modulation; it may also be switched off. External binding posts permit the use of an external AF oscillator for either FM or AM. Both internal and external AF oscillators may be used simultaneously, thus providing either FM or AM at two modulation frequencies simultaneously or simultaneous FM and AM. The internal AF oscillator provides eight fixed frequencies which may be selected by a rotary type switch—50, 100, 400 cycles and 1, 5, 7.5, 10 and 15 kilocycles, accurate to within 5%. The output voltage of the internal AF oscillator is available at the external binding posts for synchronizing or other purposes.

RF Output Voltage: The RF output voltage is continuously variable over a range from 0.1 microvolt to 0.2 volts at the terminals of the output cable. The impedance at the RF output jack, looking into the instrument, is 53 ohms resistive. The output cable has a 53 ohm resistance termination at the terminal end hence the output impedance of the unit with cable attached is 26.5 ohms.

Distortion: FM distortion at 75 kc. deviation is less than 2% when modulated with the internal AF oscillator or an external AF oscillator having 0.5% distortion or less. At 50% amplitude modulation the distortion is about 5% using the internal AF oscillator and decreases as the modulation percentage is reduced. An external AF oscillator may be employed for amplitude modulation if desired.

Spurious RF Output: All spurious RF output voltages are at least 30 db. below the desired fundamental. The RF leakage is very low.

Fidelity Characteristics: The deviation sensitivity of the FM modulation system as a function of frequency is constant from dc. to over 10 kc. At 15 kc. the deviation as indicated on the modulation meter is 0.5 db. higher than the true value. The amplitude modulation system is also dc. to 10 kc., and departs from nominal by 1.0 db. at 15 kilocycles.

Power Supply: The power supply is self-contained in the instrument for use on 60 cycles, 110 volts.

Accessories: 203-A Frequency Converter (Frequency range 0.4 mc. to 25 mc.).

Dimensions: Height: 17"; Width: 13½"; Depth: 11½".

Weight: 35 lbs.

Price: $975.00, F.O.B. Boonton, N. J., U.S.A.

PWR.ON
X1 OUTPUT

The Type 203-B Univerter, a frequency converter accessory having unity gain, is designed for use with the Type 202-B FM Signal Generator to provide additional frequency coverage of from 0.4 mc. to 25 mc. Since the 202-B FM Signal Generator covers a frequency range from 54 to 216 megacycles, the 203-B Univerter offers a simple means whereby the additional coverage of commonly used intermediate and radio frequencies may be obtained. This instrument also enables the frequency and amplitude modulation features of the 202-B instrument, as well as the attenuator calibration, to be utilized at these lower frequencies without causing any appreciable distortion.

The 203-B Univerter matches the 202-B FM Signal Generator in styling and finish, and is supplied complete with tubes and instruction book.

SPECIFICATIONS

RF Range: The Univerter, in combination with the 202-B FM Signal Generator, covers from 0.4 mc. to 25 mc. (0.1 mc. to 25 mc. with no carrier deviation). The RF voltage at the X1 OUTPUT jack is uniform within ± 1 db. over the frequency range of the instrument.

Frequency Increment Dial: This dial is calibrated in increments of 10 kc. from plus 250 kc. through zero to minus 250 kc.

RF Output: The RF output voltage at the X1 panel jack is continuously variable from 0.1 microvolt to 0.1 volt by means of the 202-B Signal Generator attenuator. For 0.2 volt input to the Univerter, the output is approximately 0.18 volt. The impedance at the RF output jack, looking into the instrument is approximately 60 ohms resistive. The RF output voltage at the 2 VOLT MAX. pin jack is uncalibrated but may be controlled from the attenuator of the 202-B FM Signal Generator. At this pin jack the internal impedance is approximately 470 ohms.

Here is an unusually attractive, EXCEPTIONALLY LOW-PRICED volt-ohm-milliameter. It is a rugged, flexible instrument, combining features which are not available in competitive models selling for more than double this price.

You will be convinced when you read the "Specifications" and "Special Features" that MODEL 101 VOLOMETER is just the instrument to have around the shop or lab whenever the type of measurement does not justify the use of expensive, complicated, highly sensitive equipment.

The fact that resistances between 1/20 OHM and 20 MEGS and AC voltages between 25 CYCLES and 1 MEGACYCLE in frequency can be measured with this unit, makes it a handy and very valuable instrument. In short, when it comes to value and versatility, MODEL 101 really sets the pace.

MODERNIZATION UNITS FOR TUBE TESTERS

For the many new tubes that have appeared on the market since 1946, practically every tube tester in use, as well as every new tube tester shipped from the factories up to April, 1947, is now obsolete to some degree.

Models 120 and 125 Modernization Units have a flexible cable with a plug that is simply inserted into the loctal socket of the old tube tester. There are spare blank sockets and spaces for additional sockets should new types of tube bases appear in the future. Tube Testing charts and data are supplied.

New miniature and subminiature sockets are provided. These units fit snugly into the compartments of the case proper or in the cover of portable types, such as Models 322P, 802N, 802NS. Use the chart below for specifying the correct model.

Modernization Kit No. 129 is supplied in kit form with prewired subpanel that is mounted in place of one of the regular sockets. Instructions are given for changes in wiring and other connections to be made by the purchaser.

Modernization Kit No. 123 is similar to kit No. 129.

PANEL INSTRUMENTS

AC and DC types are accurate to within 2% of full scale value at any point on the scale.

DC instruments combine extremely light weight moving elements and powerful alnico magnets to produce a torque to weight ratio which reduces frictional error to a minimum. This high torque to weight ratio permits use of pivots with ample pivot bearing surface to overcome effects of rough handling, shock, and vibration.

AC instruments are accurate over entire range of commercial power frequencies (25 to 125 cycles). These instruments are of repulsion vane type using carefully aged and impregnated field coils and multipliers which are wound with conductors of ample size so that temperature rise of the windings may be maintained at a minimum, even though instrument is subjected to continuous use in the circuit.

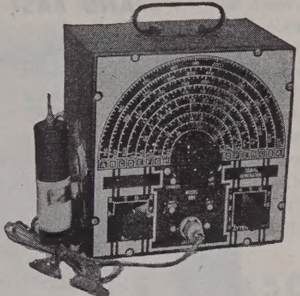
The Model 999 — A Combination
SIGNAL GENRATOR AND SIGNAL TRACER

The Ultimate in Signal Tracing Procedure is Achieved by the Model 999



Enables you to use either the broadcast signal itself or the signal injected by the Signal Generator. This is especially useful when servicing "dead" or "intermittent" receivers. You will find the Model 999 is the greatest time-saver ever provided for, by combining a full range Signal Generator and Signal Tracer into one unit. The set up time for interconnecting, etc., is entirely eliminated.

SIGNAL GENERATOR
Specifications:

- Frequency Range: 150 Kilocycles to 50 Megacycles.
- The R.F. Signal Frequency is kept completely constant at all output levels. This is accomplished by use of a special grid-loaded circuit which provides a constant load on the oscillatory circuit. A grounded plate oscillator is used for additional frequency stability.
- Modulation is accomplished by Grid-blocking action which has proven to be equally effective for alignment of amplitude and frequency modulation as well as for television receivers.
- Positive action attenuator provides effective output control at all times.
- R.F. is obtainable separately or modulated by the Audio Frequency.

SIGNAL TRACER *Specifications:*

- Uses the new Sylvania 1N34 Germanium Crystal Diode which, combined with a resistance-capacity network, provides a frequency range of 300 cycles at 50 Megacycles.
- Simple to Operate—Clips directly on to receiver chassis, no tuning controls.
- Provision is made for insertion of phones of any impedance, a standard Volt-Ohm-Milliammeter or Oscilloscope.

The Model 999 comes complete with all test leads and operating instructions. **Only** **$28.85**

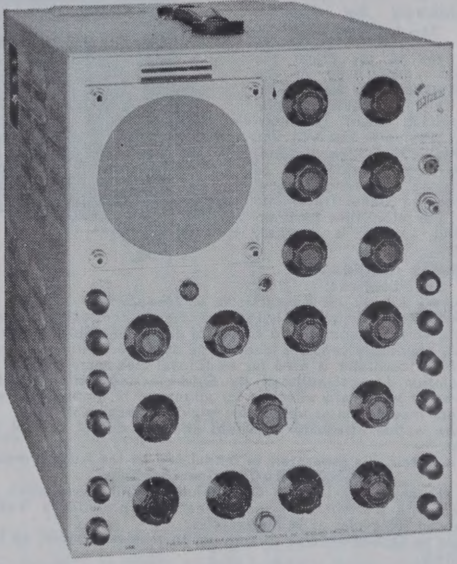
TELEPHONE: EAST 6197 *CABLES: TEKTRONIX*

NEED WIDE BAND AND FAST SWEEPS?



TEKTRONIX TYPE 511-AD OSCILLOSCOPE

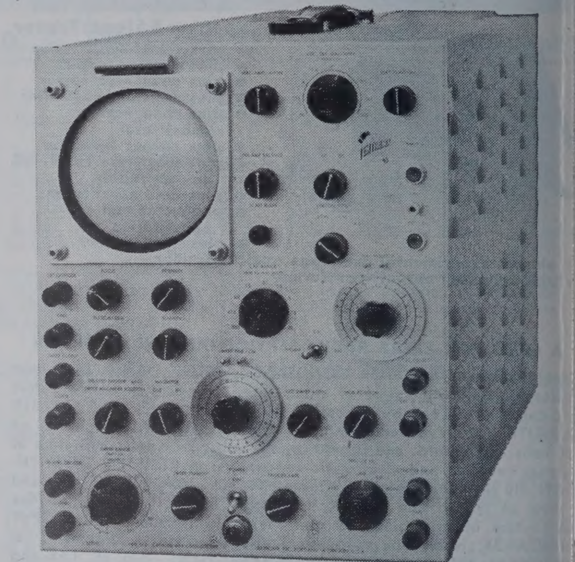
$845 *f.o.b. Portland*

VIDEO — *5 CPS — 10 MC.*
SWEEPS — *.01 SECONDS TO .1 MICROSEC./CM.*

The **Type 511-AD,** with its 10 mc. amplifier, 0.25 microsecond video delay line and sweeps as fast as .1 microsec./cm. is excellent for the observation of pulses and high speed transient phenomena. Sweeps as slow as .01 sec./cm. enable the 511-AD to perform superlatively as a conventional oscilloscope. The identical instrument without the video delay line is known as the **Type 511-A,** price **$795.00** f.o.b. Portland, Oregon.

The Types 511-A and 511-AD have broadened and further secured the position of leadership that was established by their predecessor, the Tektronix Type 511. Eminently satisfied users include leading universities, industrial organizations and independent research groups as well as the armed services and other governmental agencies.

NEED DC COUPLED AMPLIFIERS AND SLOW SWEEPS?



TEKTRONIX TYPE 512 OSCILLOSCOPE

$950 *f.o.b. Portland*

VIDEO — *DC — 2 MC.*
SWEEPS — *.3 SECONDS TO 3 MICROSEC./CM.*

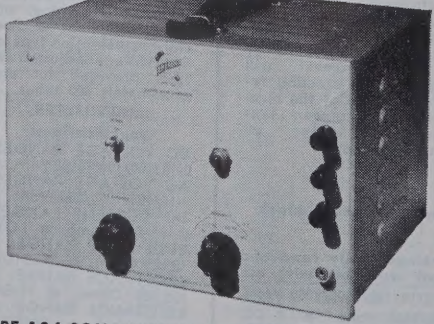
The **Type 512** with a sensitivity of 5 mv./cm. DC and sweeps as slow as .3 sec./cm. solves many problems confronting workers in the fields where comparatively slow phenomena must be observed. Vertical amplifier bandwidth of 2 mc. and sweeps as fast as 3 microsec./cm. make it an excellent general purpose oscilloscope as well. The continuously variable sensitivity range of 10,000 to 1; the differential (push-pull) input circuit with high rejection of unwanted signal components; the revolutionary carrier type blanking circuit as well as many other exclusive features have resulted in an immediate accptance of the Type 512 by prominent research personnel throughout the country.

BOTH INSTRUMENTS FEATURE:

- Direct reading sweep dials.
- Single, triggered or recurrent sweeps.
- Accurate calibration, both time and amplitude.
- All DC voltages electronically regulated.
- Sweep expansion of 5 times for any 20% of normal sweep.
- Individually adjusted for optimum transient response.
- RC probes for high impedance, low capacity input.
- Excellent image contrast in high ambient light.
- Design and fabrication integrity of highest degree.
- Choice of 5CP1A, 5CP7A or 5CP11A CRT, no added expense.
- Electrically welded all aluminum construction.
- Low weight (53 pounds — self-contained).

The **Type 104** is a low cost generator of precision square waves in the frequency ranges most commonly used for general purpose wide band oscilloscope and amplifier testing. The instrument is supplied with four fixed frequencies; two in the range of 25 cycles to 10 kc., and two in the range of 25 kc. to 1 mc. By proper choice of the four available frequencies, the Type 104, when used in conjunction with a suitable wide band oscilloscope such as the Tektronix Type 511-A, Type 511-AD or Type 512, makes possible convenient adjustment of video amplifiers and observation of their transient response.

The Type 104 is normally supplied with the following frequencies: 50 cycles, 1 kc., 100 kc. and 1 mc. The 50 cycle square wave provides a quick test for the low frequency characteristics of amplifiers. The 1 kc. square wave is a convenient signal for quickly and accurately adjusting capacity compensated attenuators. The 100 kc. and 1 mc. square waves permit convenient adjustment of video amplifiers.



TYPE 104 SQUARE WAVE GENERATOR
PRICE: **$195.00** f.o.b. Portland, Ore.

FEATURES:

- RISE TIME: Less than .015 microsec., high frequencies. Less than 2 microsec., low frequencies.
- IMPEDANCE: 0 to 93 ohms HF., 0 to 20,000 ohms, LF. depending on attenuator settings.
- AMPLITUDE: 0 to 5 volts, HF., 0 to 50 volts LF. both continuously variable.
- DIMENSIONS: 9''' high; 13½" wide; 10½" deep.
- WEIGHT: 18 pounds, self-contained.

Measures up to 10,000 or 30,000 Volts making it useful even for projection television. Special Helical-Wound Ceramic HV Multiplier Resistor, which is removable, makes it adaptable to most VTVM's and all 20,000 ohms per volt meters with 1000 or 5000 volt scales. Lucite head has high dielectric and low leakage path. Handle is made of multi-layer, plywood bakelite for greater insulation and high safety factor. Large flashguards for additional safety. Specify your instrument to your jobber.

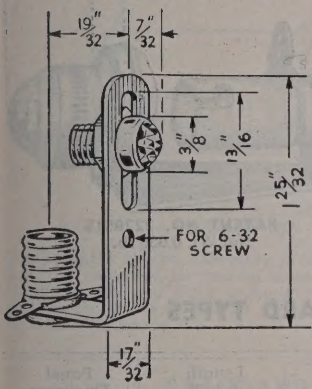
JEWEL LIGHT ASSEMBLIES

11/32" Jewel . . . Vertical Mounting

No. 5 TYPE



The No. 5 type is unique in its field because it can be adapted to the focal lengths of any miniature screw or bayonet lamp. This is an inexpensive unit, and it presents a neat appearance on small instrument panels.

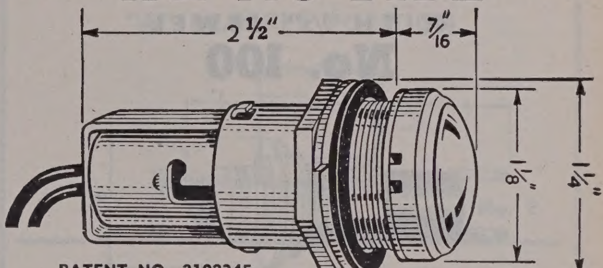
Double Contact Candelabra Bayonet

UNDERWRITERS' APPROVED

No. 975 TYPE



PATENT NO. 2192345

The No. 975 is a heavy duty double contact, candelabra, bayonet base assembly designed to be used in rugged equipment. The panel hardware (jewel holder) is attractively finished with a highly polished chrome plate. All other parts are cadmium plated. The No. 975 is Underwriters' approved for 125 volt, 75 watt service. The mounting tube and socket are detachable; therefore the wire leads of the socket assembly can be connected to the terminal block before the socket assembly is clipped into the mounting tube which is already installed in the panel. This feature facilitates quicker assembly of panels. The built in lead wires can be attached directly to screw or solder terminal blocks; thereby eliminating two soldering operations. Units are carried in stock with both 10 inch and 20 inch leads. On orders of 500 or more units the wires can be cut to your specifications. See wire table.

Dial and Jewel PILOT LIGHT ASSEMBLIES

TOTALLY ENCLOSED, MINIATURE BAYONET

PILOT LIGHT ASSEMBLIES

BUILT-IN RESISTORS FOR NEON GLOW-LAMPS OPTIONAL

These totally enclosed pilot lights meet Underwriters' Specifications. They are very rugged and particularly adapted to use in equipment subjected to extreme vibration and atmospheric conditions. The 100N and 101N assemblies are designed specifically for use with the NE51 neon glow lamp. With proper current limiting resistors (built into the socket of either the 100N or 101N), the neon glow lamps can be operated on any voltage over 65 volts AC and 90 volts DC. You merely specify the operation voltage and we furnish the correct unit. Stock units have 100,000 ohm resistors for 115 volt operation. The primary advantages of the glow lamp are its long life (3000 hrs.), resistance to vibration (unaffected), low initial cost, low operating cost (1/25 watt), and small size.

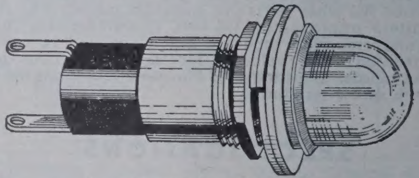
WITH BUILT-IN RESISTOR FOR NEON LAMP

No. 101



PATENT NO. 2220515

The transparent plastic cap is fluted on the inside to multiply the images of the glowing electrodes of the neon lamp. It actually has three times the visibility of the ordinary plain cap. Because of the small amount of illumination emitted by the neon lamp, it is advisable to use the dome with 180° visibility to utilize the greatest amount of available light.

Unless otherwise specified, No. 101 (designed for incandescent lamps) is equipped with a translucent cap that affords a beautiful even glow over the whole area of the dome.

SPECIFICATIONS

MOUNTING: Mounts in 11/16" dia. hole on panels up to ⅜" thick.

RATING: Breakdown voltage 2000 volts AC.

LAMPS: No. 101 is designed to house No. 47 incandescent lamp or any other miniature bayonet T3¼ lamp of less than 1 watt power consumption.

TRANSPARENT COLORS: Amber, Colorless, Red, and Milky White.
NOTE: Since the neon glow does not effectively penetrate the transparent Green and Blue caps, they are not carried in stock.

TRANSLUCENT COLORS: Blue, Green, Red, Milky White, and Yellow.

PLATING: Regularly supplied with burnished nickel plated panel hardware.

SPECIAL PLATING: Extra charge for chromium, statuary bronze, etc.

DOUBLE CONTACT CANDELABRA BAYONET

Underwriters' Approved for General Purpose

No. A900 SERIES

UL File No. E17786

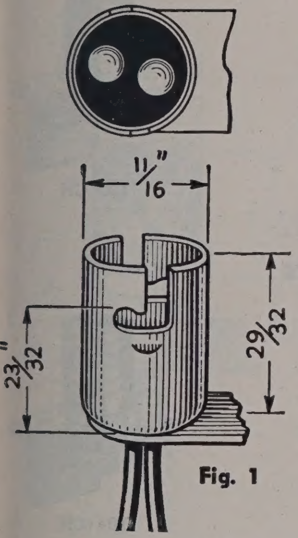

Fig. 1

This socket assembly is a 110 volt unit designed specifically for use in Underwriters' approved equipment. It has built in lead wires and is sturdily constructed befitting 110 volt application. In spite of its ruggedness it requires less space with lamp installed than does the candelabra screw type. In addition the bayonet type lamps will not loosen from vibration.

This socket can be supplied mounted to any one of the brackets shown on this page and the next. If they do not meet your requirements, we have the facilities to build them to your specifications.

The A900 type assembly is equipped with No. 18 (16 strands No. 30) tinned copper wire insulated with 1/32" of plastic insulation. See wire table. Units can be wired in series.

The Underwriter's Laboratories have approved the use of this socket with No. 22 gauge wire leads for application in radio only. With the lighter gauge wire the assembly is designated as the No. 900 Series. It can be wired in series or parallel. See wire table.

NOTE: On orders for less than 500 assemblies, no choice of leads is given. Assemblies will be supplied with 10" of black wire stripped ½".

LAMPS: 110 volt, 10 watt can be purchased from Drake Manufacturing Co.

FORMULATION OF PART NUMBERS

The part number is composed of three parts, the series number, the bracket number, and the bracket position. The series number is expressed in hundreds plus the letter prefix if there is one. For example: The part number of an A900 Series Socket (fig. 1) with a No. 50H bracket (fig. 4) in the "A" position (fig. 2) would be No. A950H-A. Similarly a unit with No. 22 wire (900 series) and a No. 50J bracket (fig. 5) in the "C" position (fig. 3) would be 950J-C. Part numbers of sockets without brackets are designated as 917, A917, and 1017 respectively.

NOTE: Please do not fail to specify length of lead wire and stripping when ordering more than 500 units.

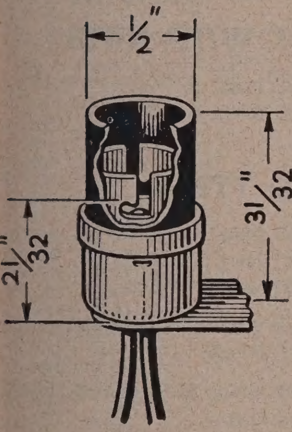
Dial and Jewel PILOT LIGHT ASSEMBLIES

MINIATURE BAYONET LIGHT SOCKET ASSEMBLIES

No. 500 SERIES

For Underwriters' Approved AC-DC Radio Receivers



In this socket assembly the bayonet shell is protected from outside contact by a sturdy fishpaper insulating shield. The lead wires are an integral part of the unit and both are secured within the socket so that they will withstand a tension over 25 pounds.

Rounded edges on the opening at the base prevent cut and frayed lead wire insulation.

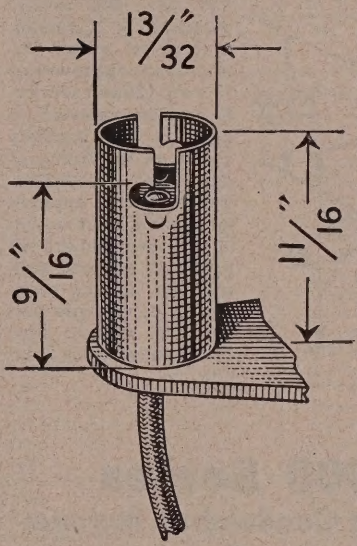
The assembly will withstand a minimum breakdown voltage of 1000 volts between contacts and to ground.

All parts are fitted so that there can be no rotation of one part with respect to another. This means that there is absolute ridgidity from the mounting bracket to the bayonet shell which supports the lamp. The center contact cannot protrude from the socket when the lamp is removed.

The standard assembly is equipped with No. 22 gauge wire, however No. 20 wire can be used.

No. 700 SERIES

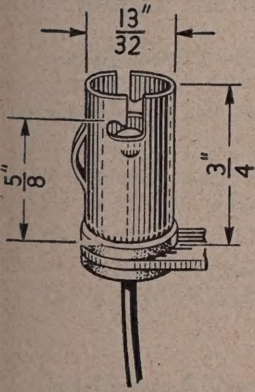
For Underwriters' Approved AC Radio Receivers



In this socket assembly the bayonet shell is electrically connected to the mounting bracket. It is secured in such a way that it cannot rotate. The lead wire is an integral part of the unit and is secured tightly enough to withstand a tension of over 25 pounds. The center contact cannot protrude when the lamp is removed.

The assembly will withstand a minimum breakdown voltage of 1,000 volts between the center contact and ground.

The assembly is customarily built with No. 22 gauge wire; however any other gauge up to and including No. 16 wire can be used.



No. 800 Series

In this socket assembly the bayonet shell is insulated from the bracket. The shell is bridged to provide a good solder connection for one lead wire. The center lead wire is built-in, and the center contact cannot protrude when the lamp is removed. Upon request the assembly can be furnished with two lead wires or no lead wires.

COMMENTS ON ALL ASSEMBLIES ILLUSTRATED HERE

The 500 and 700 types can be wired in series or parallel, but the 800 type can only be wired in series. See wire table for various lengths, color and insulation of lead wires.

NOTE: On orders for less than 500 assemblies, no choice of leads is given. All assemblies will be supplied with 10" of No. 22 plastic insulated wire stripped ½" long.

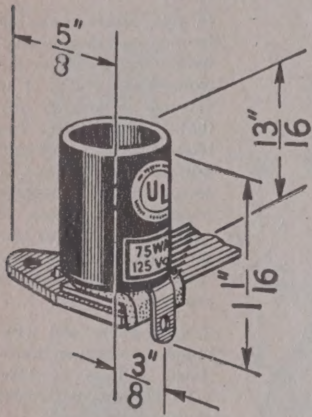
The assemblies can be attached to any of the mounting brackets shown in the listing of dial light assemblies. We also have approximately 900 other mounting brackets that are not listed. If you will submit your lighting problem to us, we are certain that we can offer you a satisfactory solution.

SOCKET ASSEMBLIES AND JEWELS

No. 300 SERIES

Candelabra Screw Base

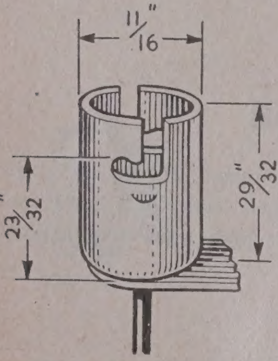
Underwriters' Approved for General Use



The No. 300 socket assembly is a candelabra screw socket, Underwriters' approved for 75 watt, 125 volt service. It can be attached to any of the brackets shown in the listing of dial light assemblies. We also have approximately 900 other mounting brackets that are not listed. If you will submit your lighting problem to us, we are certain that we can offer you a satisfactory solution.

No. 1000 Series

Single Contact Candelabra Bayonet Automotive Type



This unit is an inexpensive assembly suitably adapted for use in 6 to 115 volt circuits. It has a built in center lead wire and the socket and bracket form the ground connection. The unit is sturdily constructed and designed so that the center contact cannot protrude when the lamp is removed.

This socket can be supplied mounted to any one of the brackets illustrated with the 900 and A900 socket assemblies. If they do not meet your requirements, we have the facilities to build them to your specifications.

The standard Number 1000 type Assembly is equipped with 10 inches of No. 18 (16 strands No. 30) tinned copper wire insulated with 1/32" of plastic insulation. See wire table. Assemblies can be wired in parallel.

On orders of more than 500 units No. 22 to No. 16 gauge wire is available.

NOTE: Can be sold knocked down into extruded shell, spring, and pigtail with center contact and washer attached.

(7) Max. length from front of panel.

* **COLORED DISCS**—Where this designation (*) appears, a colored plastic disc is placed behind a clear sandblasted (frosted) smooth jewel, to conceal color until lighted. Also prevents external light from giving appearance of bulb being lighted.

In addition, lettering, numerals, or insignia may be printed on a plastic disc back of the jewel, and arranged to be visible either continuously or only after lamp is lighted.

A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

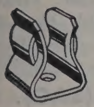
BUSS FUSE CLIPS for ¼ inch Fuses

(SFE4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MJB, MTH fuses)



Spring bronze clips are made of Herculoy — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Size of mounting hole; .130 to .135 inch.
Center of hole to back-stop; .125 to .135 inch.

Other standard fuse blocks and special fuse blocks

If blocks shown do not fit your requirements ask for information on other standard types and sizes.

If special fuse block is required, send description or sketch, showing type of fuse to be used, number of circuits, type of terminals, etc. We welcome such inquiries.

BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment.

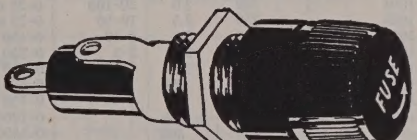
Changing or inspection of fuse is easy and quick.

Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

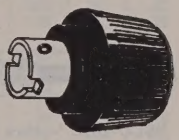
Fuse and contacts are protected from dirt and fumes.

Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.



Panel Mounted Holders for ¼ inch Fuses



Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up up to 5/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.
Normal current carrying capacity; 15 amperes.
Listed as Approved by Underwriters' Laboratories.
Shipping weight; 4 lbs. per 100

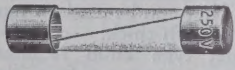
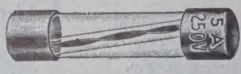
UNDERWRITERS' APPROVED 3 AG "LITTELFUSES"— 250 Volts

"SLO-BLO"—thru ¼ Amp.



STANDARD—½ to 3 Amp.



SLEEVE TYPE—4 to 8 Amp.

Littelfuse is the first manufacturer to receive Underwriters' approval of 3 AG fuses (1¼" x ¼" dia.) in current ratings over 3 amps. at 250 volts. Following list gives standard approved ratings carried in stock. **However, the Underwriters' approval to Littlefuse is a blanket approval from ⅛ to 6 amps. Intermediate ratings can be furnished without separate approval,** at a small extra charge. Littelfuse name, the amperage and voltage rating must appear on the fuse caps of approved-fuses. Many new fields are opened up by the extension of approval from 3 to 6 amps., where formerly bulky cartridges or plug fuses and their mountings were used. **This applies specially to electrical appliances, heavy duty power supplies, amplifiers, radios, communication equipment, electronic devices, motors, etc.**

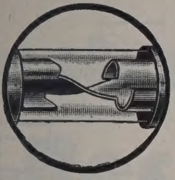
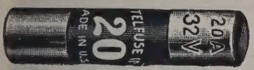
AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life



4 AG Aircraft Fuse showing reinforced twisted element



Bakelite-enclosed 4 AB Fuse

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft Services for their strength and greater carrying capacity than 3 AG fuses.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

SERIES 500 UNITS are for general applications requiring greater output current for meters, relays or other apparatus requiring more than 1 milliampere. Recommended for all such applications at commercial and the lower audio frequencies. Will also operate up to 1,000,000 c.p.s. in special applications wherein accuracy of readings is not essential.

SERIES 160 and 160-C are for applications requiring good frequency response over the entire commercial and audio range and especially when the meter, relay or other apparatus requires less than 1 milliampere for operation. In some special applications these units may be operated at frequencies up to 75,000,000 c.p.s. with special circuit treatment.

SPECIAL TYPES are available in both series 500 and 160-C. When requesting a quotation on a special type include a sketch of the rectifier required or a circuit diagram showing source and frequency of the input voltage, resistance and kind of load, required load current and the ambient temperatures.

SERIES 500 Disc diameter .500 inch. Area each disc .15 square inch. Furnished with 3" braided, tinned copper leads. Finished in synthetic lacquer-enamel.

SERIES 160 Disc diameter .160 inch. Area each disc .02 square inch. Furnished with 3" stranded, tinned thermoplastic covered copper leads. Molded phenolic case. Assembly sealed with specially developed moisture-proof compound.

SERIES 160-C Disc diameter .160 inch. Disc area, lead wire and length and moisture-proof seal are identical with Series 160. Dimensions of the case have been reduced to the most compact size. These units may be mounted in a standard midget fuse clip.

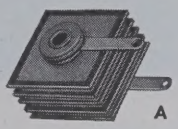
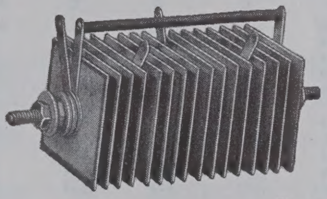
THE BRADLEY LINE

SELENIUM RECTIFIERS



A



B

Above (A) Model RS-100. Designed for radio and low power applications. Rated at 115 volts A.C., 100 milliamperes D.C., but also made for higher voltages and current.

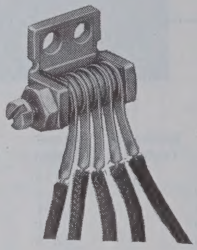
Above (B) SE-11 Series. Power rectifier stacks rated from 0.100 amperes up. Plate size from 1" x 1" up to 5" x 6".

Bradley selenium rectifiers for medium voltage applications are processed to allow good efficiency and stability at D. C. rating up to 24 volts per plate. For power applications, square plates allow a maximum of rating to space factor.

For high voltage applications, Bradley selenium rectifiers are rated up to 70 volts peak inverse per plate.

Bradley manufactures selenium rectifiers for operation from a few microamperes to many thousands of amperes and from fractions of a volt to thousands of volts. On any rectification problem, consult Bradley. With their long application experience, Bradley engineers can quickly specify the right rectifier for your requirements.

COPPER OXIDE RECTIFIERS



In above Universal Instrument Rectifier, you have a single answer to a wide range of measurement rectifier requirements — one rectifier for all circuits with A.C. voltages and D.C. currents within the unit's rating. Rated up to 12 volts A.C., 5 ma. D.C.

BRADLEY "COPROX" INSTRUMENT RECTIFIERS have vacuum processed pellets with gold contacts.

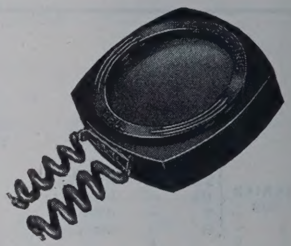
Exhaustive laboratory and field tests have proved our process produces rectifiers with maximum efficiency and minimum temperature errors. Even under severe conditions of use, aging is practically eliminated.

Electrical instruments with better accuracy are being built with "Coprox" rectifiers.

BRADLEY "COPROX" POWER RECTIFIERS, designed for low voltage applications, are rugged, compact and conservatively rated. Long service life is combined with low operating cost.

Bradley manufactures copper oxide rectifiers for operation from a few microamperes up to one ampere, and from microvolts up to hundreds of volts. All "Coprox" rectifiers are matched and balanced over a wide temperature range.

PHOTO ELECTRIC CELLS



The pigtail contact model 3-1A shown above is only one of a series of standard mountings. Others include housed models with plug-in contacts, for tube socket and nut-and-bolt types. Shapes of Bradley Luxtron* photocells vary from circles to squares, with every in-between shape desired. In size they range from the diminutive to the largest sizes required. Dimensions of the standard model illustrated are 2-3/16" x 2-5/16" x 27/64".

LUXTRON PHOTOCELLS EFFICIENTLY CONVERT LIGHT INTO ELECTRIC ENERGY WITHOUT ANY EXTERNAL POWER SOURCE. The energy developed is sufficient to operate meters and sensitive relays.

Light-weight, rugged and true to rating, these photocells give long life under the most strenuous operating conditions. As far as we have been able to determine, they are the finest on the market, although among the lowest in price.

For precision control of light with electric energy, specify Luxtron photocells. Write Bradley for samples and engineering assistance on any photocell problem you have in mind.

TELEVISION "HOW IT WORKS"

(Supplement to TV Manual Vol. 1)

A GOLD MINE OF PRACTICAL FACTS

Here is practical theory. The first chapter deals with the transmission and reception of television signals in general, giving you a clear over-all picture. The second chapter deals with frequency standards, the next with antennas. Television "How It Works," then goes into descriptions of the various portions of a television receiver: the r-f, oscillator, converter circuits in the front end; the sound channel; the video i-f system and detector; the video amplifier and d-c restorer, the sync and sweep circuits, picture tubes, power supplies. The conclusion covers alignment and servicing problems. The entire book carries the **practical** right along with the **theoretical**, ending up with the **when** and **why** of certain operations in television receiver maintenance.

HIGH FREQUENCY MEASURING TECHNIQUES USING TRANSMISSION LINES

By E. N. Phillips, W. G. Sterns, N. J. Gamara

The authors, members of the Collins Radio Company Research Laboratory, develop the thesis that a shielded transmission line with a continuous slot along its axial length is the most convenient tool for measurements in the frequency spectrum above 100 megacycles per second. Properly equipped with a scale along its axial length and an index to show the position of a probe for the exploration of the field between the conductors, the equipment described in this monograph can be used to measure wavelength, velocity of propagation, impedance, electrical length and attenuation in four-terminal networks.

AUTOMATIC FREQUENCY CONTROL SYSTEMS

From the simplest type of A.F.C. circuit to the most complicated push pull control circuit . . . you will find them all clearly explained in Rider's book. The first part of the book is devoted to a review of the combination of D.C. voltages, the phase relations in inductive, capacitive, and transformer circuits, with particular reference to the manner in which these principles appear in A.F.C. circuits. The remaining chapters cover the operation of all types of discriminator circuits, the operation of the various types of control tube circuits, including the push pull type, the reflected reactance type, and the mutual inductance type. Let Rider tell you all about A.F.C. in this up-to-the-minute book that combines theory and practice.

ALTERNATING CURRENTS IN RADIO RECEIVERS

Are you familiar with the different forms of alternating currents which are present in a radio receiver? When once you understand the basic facts relating to the cycle—frequency—sine waves—harmonics—complex waves—modulated waves—phase relations—you will have no trouble in understanding the servicing problems which involve these factors.

D.C. VOLTAGE DISTRIBUTION

Only a casual glance at the schematics of any of the multi-tube sets will convince you that the distribution of the D.C. voltage to the tube elements is complicated. The many different forms these systems take should be recognized and understood. You should know thoroughly how the value of resistance and wattage rating of each resistor is calculated and why.

RESONANCE AND ALIGNMENT

Do you know what happens when you tune a circuit to resonance? In order to align a receiver, oscillator, or transformer properly, so that maximum efficiency is attained, you must be familiar with more than just the mechanical operation. Are you familiar with I.F., oscillator, R.F. and detector alignment for all types of circuits—single, double and triple tuned systems?

AUTOMATIC VOLUME CONTROL

Automatic volume control has now become a standard feature of every well made receiver. Are you familiar with every type in use and can you recognize one system from another by examining the schematic? Do you know how various types of tubes are used in each circuit? Noise suppression systems, time delay circuits—audio-frequency volume expander systems and other such networks have greatly increased servicing problems.

The Radio Amateur's Handbook

Over a period of more than twenty years *The Radio Amateur's Handbook* has grown from a small manual of amateur operating to the world's most valuable and widely-used radio book. Just as amateur techniques and developments have often been forerunners of professional engineering, and the amateur body itself become a training ground in providing executives, engineers and technicians for the radio industry, so has this standard manual of amateur communication become the all purpose volume of radio.

The 1949 edition retains the material on theory, principles and design which made the *Handbook* so valuable, but it has been revised and integrated with constructional data. This is not only of value to the practicing radioman but to the student as well, for it gives him practical applications and examples of the theory he is learning. As a text, the *Handbook* is probably more used in radio schools and colleges than any other single volume.

In constructional material, no publication equals the *Handbook* in practical utility, its treatment of radio communications problems in terms of how-to-do-it rather than by abstract discussions and abstruse formulas. There are few radio manufacturers, schools, engineering firms, experimental laboratories and military communications units which do not possess at least one copy of this valued and modern reference work.

Text, data book, constructional manual, operating reference book — it is all these and more. Its annual rewriting assures a modern up-to-date text, so necessary in a science so fast moving and progressive as radio. Yet in this virtually continuous modification there has always been the objective of presenting the soundest and proved aspects of current engineering practice rather than the merely new and novel.

A Course In Radio Fundamentals

The prime function of the book is to help the individual home student. The radio amateur is essentially a practical man. He has to be, because usually he builds his own equipment and he must make it work. His guide in that work is usually *The Radio Amateur's Handbook*, published by the League. Splendid as that famous book has proved, there has been a widespread need for a guide which would assist in studying it and which would facilitate a real absorption of radio principles. Such a course of study is contained in this book. It is a highly-developed application of the time-tested principle of "learning by doing." Written around the ARRL *Handbook*, the course has been so thoroughly proved and has helped so many people that the individual student undertaking it may be assured that, if he follows its precepts literally and exactly, performs the experiments, and examines himself honestly by the test questions, he *cannot fail* to learn the principles of radio. *Price* **50c**

Hints & Kinks

Amateurs are noted for their ingenuity in overcoming by clever means the minor and major obstacles they meet in their pursuit of the chosen hobby. An amateur must be resourceful and a good tinkerer. He must be able to make a small amount of money do a great deal for him. He must frequently be able to utilize the contents of the junk box rather than buy new equipment. Hints & Kinks is a compilation of hundreds of good ideas which amateurs have found helpful. It will return its cost many times in money and savings—and it will save hours of time. *Price* **50c**

AMERICAN RADIO RELAY LEAGUE, INC.,

The A.R.R.L. Antenna Book

The present edition of the ARRL Antenna Book represents an accumulation of ten more years of the amateur's experience in both war and peace in making the all-important ever fascinating "sky wire" carry signals to the ends of the earth. The data contained in this book are the result of practical experience both of the authors and hundreds of amateurs who have contributed to the practical know-how that this book expresses.

The book has two principal divisions. Chapters 1 through 5 deal with the principles of antennas and transmission lines, wave propagation and its relationship to antenna design, and the performance characteristics of directive antenna systems. These five chapters might be called a textbook on antennas; they enable the reader to design a system of his own to fit his particular needs. Beginning with Chapter 6, there is a series of chapters in which complete data are given on specific designs for the various amateur bands. The amateur who has not studied the first section, or who wishes to avoid the necessity for making his own calculations, will find in these chapters the information necessary for putting up the system that appeals to him. The remaining chapters deal with the highly important mechanical features of construction and related subjects such as determining geographical directions.

This required twice as big a book as the previous edition but we are sure you will find it well worth more than the nominal cost.

How To Become A Radio Amateur

Universally recognized as the standard elementary guide for the prospective amateur. Features equipment which is simple in construction. The apparatus is of a thoroughly practical type capable of giving long and satisfactory service — while at the same time it can be built at a minimum of expense. The design is such that a high degree of flexibility is secured, making the various units fit into the more elaborate station layouts which inevitably result as the amateur progresses. Complete operating instructions and references to sources of detailed information on licensing procedure are given.

The Radio Amateur's License Manual

To obtain an amateur operator's license you must pass a government examination. The License Manual tells how to do that — tells what you must do and how to do it. It makes a simple and comparatively easy task of what otherwise might seem difficult. In addition to a large amount of general information, it contains questions and answers such as are asked in the government examinations. If you know the answers to the questions in this book, you can pass the examination without trouble.

Learning the Radiotelegraph Code

This booklet is designed to train students to handle code skillfully and with precision. Employing a novel system of code-learning based on the accepted method of *sound* conception, it is particularly excellent for the student who does not have the continuous help of an experienced operator or access to a code machine. It is similarly helpful home-study material for members of code classes. Adequate practice material is included for classwork as well as for home-study. There are also helpful data on high-speed operation, typewriter copy, general operating information — and an entire chapter on tone sources for code practice, including the description of a complete code instruction table with practice oscillator.

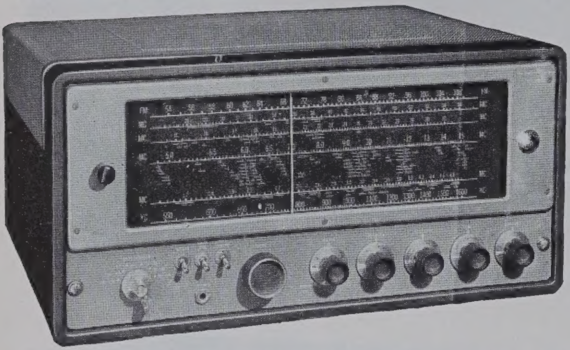
SX-62 FM/AM All-Wave Radio



SWL VERSION OF FAMOUS SX-42 . . . COVERAGE 540 KC — 109 MC INCLUDING FM . . . BUILT-IN CRYSTAL CALIBRATOR.

Having basically the same chassis as Hallicrafters best communications receiver, the SX-62 provides communications-receiver performance in simplified form. A single tuning control covers the wide-vision dial. Only one band lights up at a time — you always know just where you are tuning.

In addition a crystal calibration oscillator is built in. A flip of the switch at any time will put test signals at 500 KC intervals across the dial. You just tune in the nearest one of these signals and then use the calibration-reset control to adjust the dial pointer to the exact frequency.

Continuous AM reception from 540 KC to 109 MC; FM reception 27-109 MC. Temperature-compensated oscillator with voltage regulator. Two RF and three IF stages; dual IF channels (455 KC and 10.7 MC). Audio flat 60-15,000 cycles; 8-watt push-pull output. CONTROLS: Band Selector — #1 540-1620 KC, #2 1.62-4.9 MC, #3 4.9-15 MC; #4 15-32 MC, #5 27-56 MC, #6 54-109 MC; Receive/Standby, Crystal calibration On/Off, Noise Limiter, Tuning, AF Gain, Phono/FM/AM/CW, six-position Selectivity, four-position Tone, RF Gain, and Calibration Reset. THE RME 84
FOR HOME—PORTABLE OR MOBILE OPERATION

RME 84 at right, VP-2—6 volt power pack with cable attached, optional for RME 84 in center, CM-1—Carrier Level "S" Meter with cord and plug, optional for RME 84 at left.

The Coverage Is Complete .540 to 44 Megacycles

An important feature is the continuous coverage ranging from 540 kc to 44 megacycles. This coverage, in addition to providing for the regular broadcast band, takes in the 80, 40, 20, 15 and 10 meter amateur bands. The calibration is made on a 7 inch diameter scale. In addition, a smooth-running vernier dial gives band spread on any setting of the main scale. The vernier scale makes five complete revolutions for the 180 degree rotation of the tuning condenser.

Seven Tubes Have Been Chosen For The RME 84

1. A 7B7 loctal radio frequency amplifier is ahead of the first detector.
2. A 7S7 loctal is used as a first detector and radio frequency oscillator.
3. A 7B7 serves as the first IF operating at 455 kc.
4. A 7B7 second IF further amplifies the signal.
5. A 7K7 loctal acts as second detector and first audio amplifier.
6. Another 7K7 provides the beat frequency and acts as noise limiter.
7. The 6G6G provides the final audio frequency output.
8. A 5Y3GT is the power rectifier tube.

Portability Built Into The RME 84

Conscious of the fact that many thousands of amateurs want a receiver for portable operation, the new RME 84 is equipped with a special socket connection making possible connections to either a B battery and an A battery supply or a similar source of power such as an external vibropack. 135 volts of B and 6 volts of A battery will operate the RME 84 at full power. The drain on the B battery is only 32 milliamperes at 135 volts and the 6 volt A battery provides 1.5 amps, including the two dial lights.

The new noise limiter, of the series type, performs exceptionally well. Also made available for future use with the RME 84 is a signal strength meter to be connected through the special socket located on the rear of the chassis apron.

SENSITIVITY: The average sensitivity of the RME 84 is of the order of 2 microvolts over the entire range of the instrument.

RME 84, CODE HANDY, complete for 115 volt, 60 cycle operation and for use with external battery supply. May also be had for 230 volt, 25 cycle operation at additional cost. **f.o.b. Peoria, Illinois, Net Selling Price** $98.70

VHF-152A 3 BAND CONVERTER

Reception on the new high frequencies, 50 to 54 mc. and 144 to 148 mc. bands, and bettter reception on the 27 to 29.7 mc. band, using the double detection system, image free, at a cost which any amateur can afford—that is what the new VHF-152 is designed to give. . . . Every owner of a communications receiver can, with the acquisition of this new converter, do a much better job of working high frequency signals than is possible with most any higher priced, specially designed receiver.

This converter provides an order of stability at 50 mc. much higher than most communications receivers have when operating at 5 mc. New engineering design and construction make this possible.

Miniature tubes are used, a 6AK5 rf amplifier and a 6J6 detector and a 6J6 oscillator complete the converter proper. The built-in power supply uses a 5Y3GT rectifier tube and a VR150 voltage regulator. The three bands are calibrated to cover the full sweep of a seven-inch diameter scale, indirectly illuminated. . . . The tuning mechanism is of the same sturdy, positive construction characteristic of all RME units. Smooth, velvety operation of the large knob makes operation a pleasure.

The sensitivity of the VHF-152 is of the order of 2 microvolts. Its output frequency is 7000 kc.

Separate connections are provided for the 10, 6 and 2 meter antennas and for the antenna used with the receiver. Each band has its own especially designed antenna input circuit of approximately 300 ohms impedance. The input of the receiver is changed from the VHF-152 output to the receiver antenna by a front panel switch. Another front panel switch selects the 10, 6 or 2 meter band for VHF-152 operation.

Interconnecting plug and cord are also furnished, which permanently connect the VHF-152 direct to the input terminals of the receiver.

The cabinet is designed to match the RME-45 communications receiver, both in streamlined appearance and in two tone gray and black crinkle finish.

Dimensions are as follows: 11" high, 12" wide, 11" deep, with hinged lid. Standard operation is for 115 volt, 50-60 cycle power source.

Complete with tubes, interconnecting plug and cord. **CODE: HAMPY, f.o.b. Peoria, Illinois, Net Selling Price** .... **$86.60.**

THE HF 10-20 CONVERTER
For 10-11-15 and 20 Meters

Because of the double conversion system, the HF 10-20 provides outstanding and imageless reception on 10-11-15 and 20 meters. And it's an especially vital adjunct to those receivers that tune only up to 18 mc. or possess inadequate bandspread. The HF 10-20 provides an average of 7.8 linear inches of calibrated bandspread on each of the three bands. Images are non-existent. The output (I. F. frequency) of the HF 10-20 is 7 mc. It can be used with any all-wave or amateur receiver. Features include provision for separate antennae, self-contained power supply, antenna selector switch, band selector and high gain. The increase in gain, depending on the receiver and receiving conditions, is approximately 30 DB over the entire range of frequencies covered.

Tubes used are a 6BA6 RF amplifier and a 6J6 twin triode mixer. Built-in power supply uses a 5Y3GT rectifier and a VR150 voltage regulator.

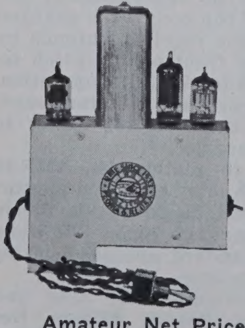
For Optimum Narrow Band FM Performance

With this plug-in unit and an RME 45 receiver, the noise reducing advantages of NFM are fully realized.



NFM Signals that can't be heard with good AM communications receivers come in loud and clear against a noiseless background.

Equal sensitivity can be enjoyed on AM or NFM. It employs a highly efficient ratio-type detector and a limiter for noiseless reception of NFM signals. Only RME 45 receivers can employ the unit.

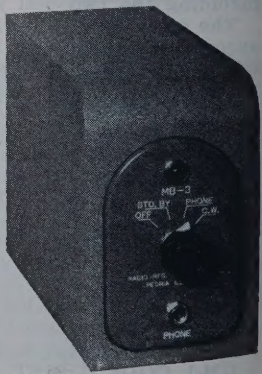
A Break-In & Monitoring Device for CW & Fone

The "Boomerang" is the solution to rapid and efficient break-in, and the avoidance of needless QRM. Dots and dashes are heard in the headphones or the speaker while sending—a great help in perfecting the fist and avoiding errors.



When the key is down, any signal normally going through the receiver is automatically suppressed. Raise the key and instantaneously the receiver functions.

The "Boomerang" can be used as a handy monitor for phone operation, as a code practice oscillator and a tone modulator. Tubes include a 7K7, a 6SL7 and a 6x4 rectifier. Cabinet is two-tone grey finish.

- **Rapid assembly. No screws or nuts to install.**
- **Highly efficient on all channels, 2 through 13.**
- **9-foot aluminum mast.**
- **Weatherproof twin lead connections.**
- **Designed by antenna engineers.**

The GONSET "Double-W" all-channel television beam antenna provides results heretofore obtainable only in the highest priced antennas and in addition offers several new features.

The **gain** of the "Double-W" **increases with frequency,** a desirable characteristic when it is considered that receiver sensitivity decreases and line losses increase as the frequency is raised.

The **directivity** of the "Double-W" also **increases with frequency,** a valuable feature when it is considered that "ghost" problems increase with frequency.

Due to new electrical operating principles no "holes" in reception will be found in any of the channels.

Throughout the high band the directivity pattern is sharper than that of a dipole and reflector combination, or a dipole, director and reflector combination. This provides better discrimination against spurious reflections from buildings and other tall objects slightly to one side of the main signal path. Such reflections often produce a particularly tough "ghost" problem on the high band which cannot be resolved satisfactorily with a dipole-and-reflector combination.

This permits the use of a mixture of axial (XOA) and radial (XOR) type contacts in the same socket to obtain the shortest possible leads, or minimum size in tight places. The above sockets all mount with two 4-40 screws on .875" centers. Chassis cutout should be ¾" dia. Shields for use with these sockets are on page 21.

TRANSMITTER COIL FORMS

The Transmitter Coil Forms and Mounting are designed as a group, and mount conveniently on the bars of a TMA condenser. The larger coil form, Type XR-14A, (not illustrated) has a winding diameter of 5", a winding length of 3¾" (30 turns total) and is intended for the 80 meter band. The smaller form, Type XR-10A, has a winding length of 3¾" and a winding diameter of 2½" (26 turns total). It is intended for the 20 and 40 meter bands.

Either coil form fits the PB-15 plug. For higher frequencies, the plug may be used with a self-supporting coil of copper tubing. The XB-15 Socket may be mounted on breadboards or chassis, as well as on the TMA Condenser.

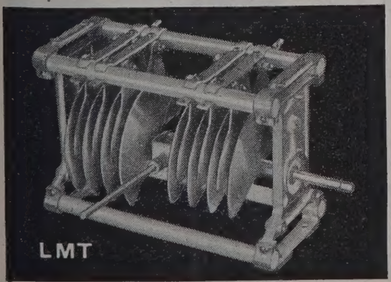
TYPE LMT

A heavy duty transmitting condenser that completely eliminates troublesome closed loops, vastly simplifying the problem of unwanted harmonics. The rotor shaft is completely insulated from the end plates. Long leakage path (higher safety factor). Plates and parts are extra heavy with highly polished rounded edges to prevent flash-over. Adjustable stator plate mounting and end bearings. Available in single-stator, double-stator, or double-stator right angle center drive models. Same capacities and prices as National TML Condenser. Condensers with right angle drive add $3.90 to price shown.



TYPE TML

is a heavy duty job throughout. The frame structure (rugged aluminum castings with dural tie bars) and precision bearings assure permanent rotor alignment. All plates are extra thick with rounded and polished edges. This, plus specially treated steatite insulators and a husky self-cleaning rotor contact, provides high flashover, current and voltage ratings.

Plates: straight-line-cap., 180° rotation. Dimensions: Base 1" x 2 1/4", mtg. holes on 5/8" x 1-23/32" centers, 2-5/16" max. length.

The UMB-25 and UMB-50 are differential (balanced stator) models. UM-10D and UMA-25 are double-spaced and the latter is bolted construction for experimental capacity reduction. Hardware for panel or chassis mounting is supplied with all UM condensers.

PRECISION CONDENSERS

Originally developed for the famous HRO and NC-100 receivers, National PW and NPW condensers and drive units are well known to professional and amateur radio men throughout the world. Sturdily constructed of the finest materials and carefully adjusted by skilled hands, they have become "standard specifications" for applications requiring smooth, precise control and high re-set accuracy.

The Micrometer Dial reads direct to one part in 500. Division lines are approximately 1/4" apart. The drive, at the mid-point of the rotor, is through an enclosed preloaded worm gear with 20 to 1 ratio. Each rotor is individually insulated from the frame, and each has its own individual rotor contact. Stator insulation is steatite. Plate shape is straight-line frequency when the frequency range is 2:1.

PW Condensers are available in 1, 2, 3 or 4 sections, in either 160 or 225 mmf per section. Larger capacities cannot be supplied.

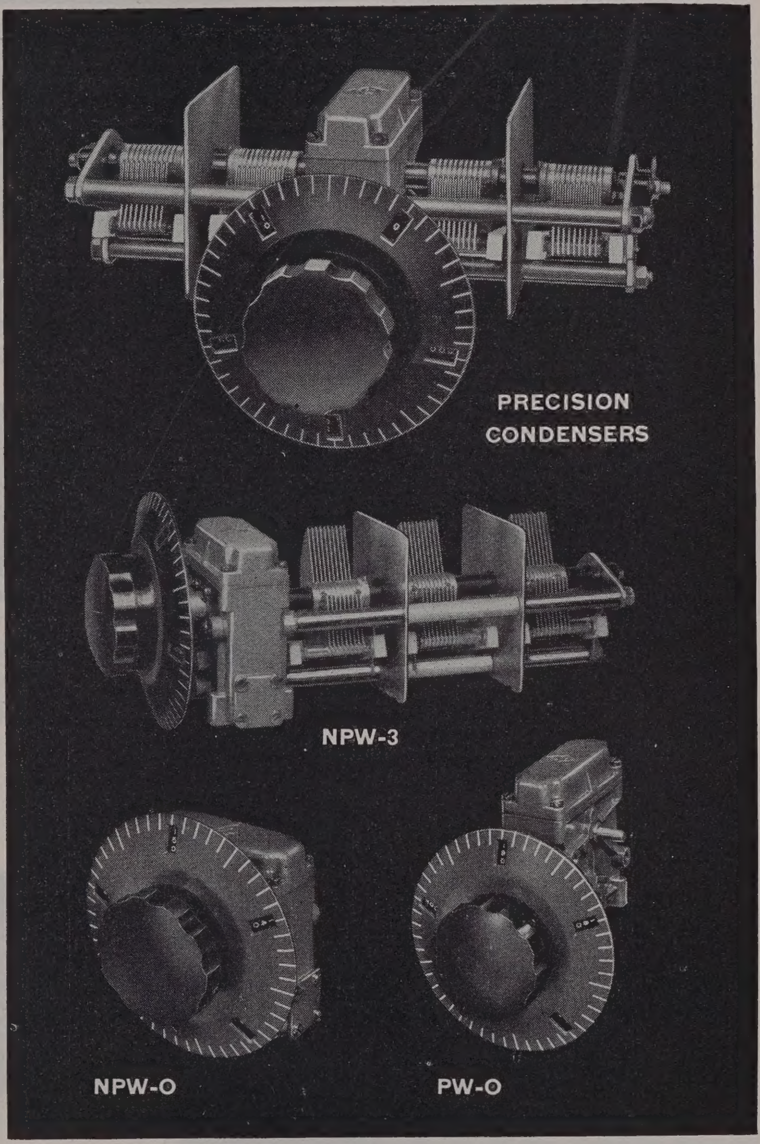
PW-1R	Single section right	**Net $13.50**
PW-1L	Single section left	**Net $13.50**
PW-2R	Double section right	**Net $18.00**
PW-2L	Double section left	**Net $18.00**
PW-2S	Single section each side	**Net $18.00**
PW-3R	Double section right; single left	**Net $24.00**
PW-3L	Double section left; single right	**Net $24.00**
PW-4	Double section each side	**Net $27.00**
NPW-3	Three sections, each 225 mmf.	**Net $24.00**

Similar to PW models, except that rotor shaft is perpendicular to panel.

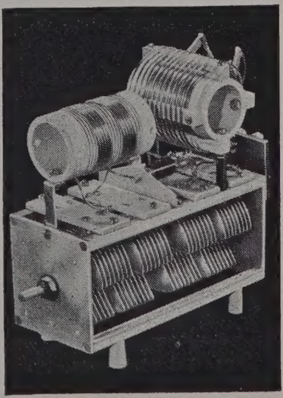
NPW-O **Net $9.00**
Uses parts similar to the NPW condenser. Drive shaft perpendicular to panel. One TX-9 coupling supplied.

PW-O **Net $9.90**
Uses parts similar to the PW condenser. Drive shaft parallel to panel. Two TX-9 couplings supplied.

PW-D **Net $5.25**
The Micrometer Dial used on the condensers and drives above is available separately. It revolves ten times in covering the complete range and as there is no gear reduction unit furnished, the driven shaft will revolve ten times, also. The PW-D dial fits a shaft 5/16" in diameter.



MULTI-BAND TANK ASSEMBLY



The unique MB-150 Multi-Band Tank tunes all amateur bands from 80 through 10 meters with 180° rotation of the shaft; the coils are never changed. The unit is built around a circuit which tunes to two harmonically unrelated frequencies at the same time. Thus, it becomes possible to cover a wide frequency range and yet maintain a reasonably constant L/C ratio. 3" wide x 8 1/4" high (including the GS-10 standoffs) x 9" long overall including the 1/4" dia. shaft and output terminals.

Features of the MB-150:

(1) For use as the all-band plate tank in push-pull or single-ended stages running up to 150-watts input (1500 volts peak). It is ideal for a pair of 807s or 809s or a single 829B.

(2) Separate link coupling coil has special clips which adjust to match impedances up to 600 ohms directly. Output couples into a higher powered amplifier, an antenna or an antenna tuning network.

(3) Fast band changing is accomplished without handling coils, thus removing one of the danger points in the amateur station.

TELEVISION COILS

S-949

These components when used in a properly designed circuit can provide a gain of approximately 10,000 × in the picture I.F. amplifier with overall response as illustrated. The sound I.F. system can supply a gain of approximately 7,000 × from the converter grid to the grid of the last I.F. tube and a discriminator slope sensitivity of approximately 0.08 volts/kc. with 1.0 volt signal level at the last I.F. amplifier tube grid. The overall sound I.F. and discriminator response is linear over 150 mc.

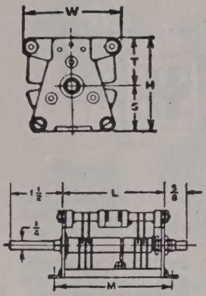
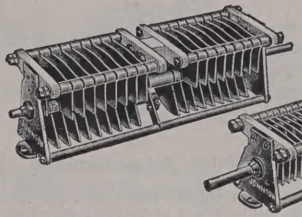
TYPES E AND F





Type E Dual   Type F Single

Type	T	S	W	H
E	$1\frac{5}{16}$	$1\frac{9}{32}$	2⅝	$2\frac{19}{32}$
F	$1\frac{1}{32}$	$\frac{31}{32}$	$2\frac{1}{16}$	2

Designed as rugged, compact units for medium and low power transmitters, type E and F condensers are in a class by themselves. They have more capacity per cubic inch and occupy less panel space for their rating than any other condenser on the market. Their rapid adoption by manufacturers of high grade equipment and discriminating amateurs is ample proof of their excellence.

Points of superiority: Heavy aluminum plates, .032'' thick, with rounded edges for maximum voltage rating—Heavy aluminum tie rods ¼'' diameter for frame strength and rigidity—Steatite insulation—Stator mounted above to reduce capacity to ground—heavy phosphor bronze contact springs, cadmium plated—Center contact on dual models—Chassis or panel mounting—Stainless steel shafts.

In addition to mounting foot shown, removable single hole brackets are furnished so that condenser may be inverted from position shown, or other components mounted above.

Panel space, Type E, 2⅝'' wide x $2\frac{19}{32}$'' high panel space, Type F, $2\frac{1}{16}$'' wide x 2'' high. Mounting (M) dimension, on both E and F Types, $\frac{7}{16}$'' more than L dimension.

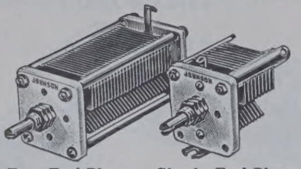
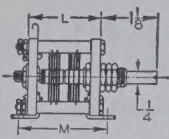
Special plate spacings, capacities, shaft extensions, insulation, mounting brackets, terminals, etc., can be furnished to specifications for commercial applications.

CONDENSERS FOR HIGHER VOLTAGES

The JOHNSON line includes heavy duty pressurized or air dielectric fixed and variable condensers for high voltage commercial applications. Data sheets furnished on request.

TYPE H CONDENSER





The Type H condenser was designed for aircraft transmitters and combines a minimum of weight and size with simple but rugged construction. Capacities and spacings are provided for low and medium power stages. Use of steatite for end plates avoids any possibility of "short circuit loops" and permits panel mounting with both rotor and stator insulated from ground. Has aluminum plates .020" thick. End plate 1½" square. Capacity measurements are taken with condenser in position shown above.

Mounting (M) dimension is 5/16" more than the L dimension.

L: Length Behind Panel

Voltage breakdown is 1250 V. peak. Nickel-plated finish.

Panel mounting space is ¾" by ⅝". Mounting hole ¼". Slotted for screw driver adjustment or takes a 3/16" knob. Improved terminal provides dual low inductance path to both stator supports, eliminates possibility of loosening plates when soldering, avoids binding stresses on stator supports caused by wiring.

See Page J-35 for knob for these condensers.

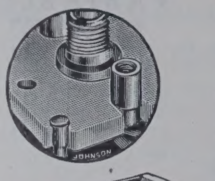
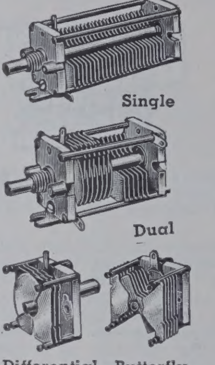
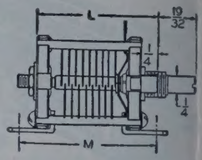
NEW JOHNSON TYPE L VARIABLES

(167 Series)

Ceramic Soldered for Stability, Strength







With the introduction of this new line of air variables, JOHNSON brings many important design advantages never before available.

Outstanding of these is the use of perfected ceramic soldering which assures absolute — and permanent — rigidity and strength, absolute — and permanent — maintenance of capacities!

There are no eyelets, nuts or screws to work loose, causing stator wobble and fluctuations in capacity. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged steatite end plates themselves. There's nothing to come loose, because the stator terminals, mounting posts and rotor bearings are ceramic soldered!

Silent operation on the highest frequencies is assured with a split sleeve tension bearing that also prevents fluctuations in capacity.

These new variables are ideal for peak efficiency even under the severest conditions, such as portable — mobile operation.

Two sets of stator contacts are provided for connecting components to either side of condenser without appreciably increasing inductance of the circuit. New bright alloy plating is used. It has high corrosion resistance and possesses lower electrical resistance than other common platings.

Mounting (M) dimension is ¼" more than the L dimension.

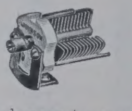
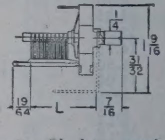
TYPE J CONDENSER





The Type J condenser is a midget with big condenser characteristics. It has wider spacing than most small types, yet occupies little more space and is ideal for oscillator and low power stages. The spacing is .025" and universal type mounting brackets make possible a variety of mountings including chassis, panel, or inside tube socket type inductors. Steatite end plate is 1⅛" wide.

EXPLANATION OF TYPE NUMBERS

The first part of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size or type. A second letter D indicates a two section type. The final number multiplied by 100 is the approximate peak breakdown voltage. Capacity measurements of the E and F types are made with the condensers in the position shown in the above illustration. The C and D types are measured in inverted position.

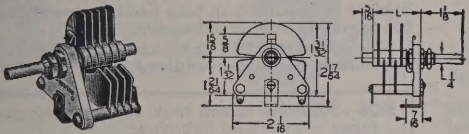
TYPE G CONDENSER



The Type G condenser is extremely popular as a neutralizing condenser for medium and low power stages. It is also widely used for grid and plate tuning at high and ultra-high frequencies. A wide range of capacities and spacing make it adaptable to many applications. It has a single end plate of steatite and low minimum capacity. .032" rounded aluminum plates, universal mounting bracket locking nut, and front and rear shaft extension are among outstanding features.

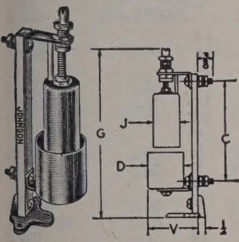
TYPE N CONDENSER



Small mounting space requirements, extremely high voltage rating in proportion to size, fine adjustment with uniform voltage breakdown rating throughout the full capacity range, and low cost, make these neutralizing condensers ideal for the modern transmitter. "Plates" are aluminum cups supported on a steatite frame with cast aluminum mounting bracket. Because of the design these condensers will withstand much higher voltage than conventional flat plate condensers of the same spacing. The N375 has been improved and now features a bushing for the guide shaft for greater stability and a beaded lower cup for high voltage rating. Peak R.F. Breakdown Ratings at 2 Mc.; N125 8,500, N250 11,500, N375 14,500.

A Coil to Match Your Tube —
A Link to Match Your Line

There are two models for most bands for use with either high voltage low current, or low voltage high current tubes.

With these new JOHNSON Ham Inductors and "plug-in" Swinging Link Assemblies the amateur can instantly match coil to tube — link to line. These outstanding inductors are also available in semi-fixed models.

Heavier Windings on All Models

Efficiency is further increased because coil windings are a wire-size larger than on most available inductors — resulting in less heating, lower loss and consequently higher efficiency.

The new JOHNSON Inductors and "plug-in" Link Assemblies fit all conventional inductor assemblies.

E. F. JOHNSON Company WASECA, MINNESOTA

INSULATORS AND BUSHINGS

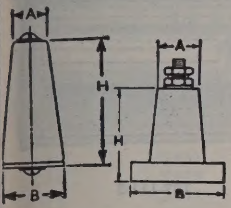
JOHNSON insulators were introduced in the early twenties, and soon established the sort of dominance that occurs occasionally when one line offers more in choice of style and size; in advanced but practical design; and in mass production economy than others. This position has been maintained through the years by careful attention to the product, the line, and the needs of the user.

JOHNSON insulators are specifically designed for high frequencies. Insulating materials were selected after exhaustive laboratory tests. Superior grade, low absorption, well glazed electrical porcelain, and Grade L 4 or better steatite are used.

Of the insulators appearing under the headings "Steatite" all but the 500 series and the 135-55 are offered in this finer material for the first time. Their dielectric losses are but a fraction of those for the same parts in porcelain, and they are particularly recommended for high frequency work.

In addition to fine quality insulating materials the JOHNSON line distinguishes itself with perfection of ceramic design logcial proportions; clean-cut, accurate molding; and high grade nickel-plated brass hardware, with milled (not stamped) nuts.

STAND-OFF AND CONE INSULATORS



The stand-off insulators feature heavy, breakage-resistant bases and adequate "glaze grooves" around mounting screw holes. Numbers 135-65, 135-66, 135-67 and 135-68 have unbreakable, drawn and etched aluminum bases.

The No. 500 cone insulator series are steatite for better high frequency insulation. Threads are tapped directly into the ceramic. Furnished complete with machine screws, brass and cushion washers.

THRU-PANEL INSULATORS AND BUSHINGS

In the thru-panel and bushing series special attention has been given to obtaining high mechanical strength through heavier construction and at the same time increasing the breakdown voltage. Flat mounting surfaces with cushion washers eliminate breakage. Bottom pieces have long internal and external portions for higher breakdown voltage rating, and grooved surfaces to increase leakage path. Jack types have terminals permitting connection above as well as below the panel.

JOHNSON lead-in bushings are designed to have even greater mechanical strength and long leakage path in proportion to size. Numbers 135-53 and 135-54 are supplied as single porcelain parts including cushion washers.

Nos. 135-50 and 135-55 are steatite and have a special interlocking feature which permits mounting on thin panels without extra spacing washers.

Nos. 20, 20J, 22, 22J and 24 are now also steatite with heavily plated brass hardware.

RADIO CABINETS

A Host of Features
Aluminum for Lightness
Steel for Strength

These new JOHNSON cabinets represent the first real advance in cabinet design since the introduction of the first Amateur relay panel cabinet years ago. JOHNSON'S extensive "know-how" and production facilities developed during more than ten years of experience building commercial cabinets for Broadcast Phasing Equipment and Transmitters, is now being applied to the design and manufacture of these superb Amateur cabinets.

FLOOR MODELS — REAR DOOR ONLY

They feature unique adjustable rails for standard relay panels. These rails may be moved forward or backward to suit the user making vertical chassis construction practical by allowing additional room at the front for mounting some components so they project forward. Later a DeLuxe door will be available to allow full use of this feature. Present cabinets are arranged so that the door may be added at any time. Both vertical panel construction and front doors are widely used commercially, and now for the first time these features are offered to the Amateur at Amateur prices.

Other exclusive features include recessed toe spaces at front and sides; inside ventilation with inlets in the bottom of the cabinet and outlets in the top, allowing cabinets to be placed directly against other objects without restricting the air circulation; and reversible rear door (may be installed to hinge either way) with positive handle lock.

Side panels and rear doors are constructed of heavy (.051") aluminum for lightness, and sturdy steel frames, tops and bottoms for strength. Rails for panels tapped for 10-32 screws and will accommodate either Amateur or Western Electric notching. Shipped knocked-down for your convenience and to save you freight charges; easily assembled in a few minutes with screws and nuts, no self-tapping screws. Available in either fine black wrinkle outside and flat satin black inside or a beautiful silver gray (no purple) outside with a matching flat gray inside.

TABLE MODELS — TOP DOOR ONLY

More than mere cabinets, these JOHNSON units are superbly engineered as fine pieces of equipment. Built for a life-time of hard usage and handsomely styled to be in keeping with the most expensive apparatus. All aluminum construction for lightness, heavy .064" metal for strength. Rails for attaching panel are double thickness, tapped for 10-32 screws and on universal centers for either Amateur or Western Electric notched panels. Gracefully rounded top and front corners add to appearance and rugged mechanical strength. Opening at the bottom rear for attachment of plugs and cables to the chassis, also provides ventilation which is completed through inside baffles in the sides near the top.

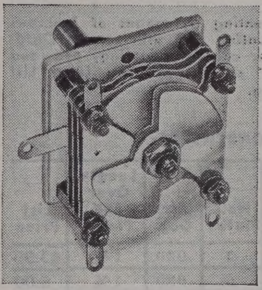
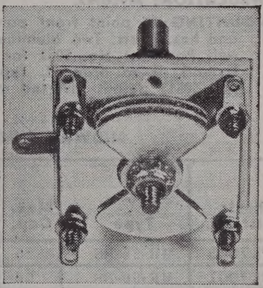
A NEW LINE OF CARDWELL MIDGET CONDENSERS FOR V.H.F.



PL-6113



PL-6076

Cardwell offers a new line of 90 degree condensers with butterfly rotor plates, fulfilling a demand created by engineers and amateurs since the publication of an article "Stabilizing The 144 Megacycle Transmitter" in April, 1946 "QST." Also see pages 351 to 353 inclusive in the 1946 ARRL Radio Amateurs Handbook. PL-6113 and PL-6076 are specified in these articles. Features of these 90 degree midget condensers are as follows:

Electrical Symmetry
Low Distributed Inductance.
No Moving Contacts.
Plates easily removable to change capacity range.
Isolantite Insulation.
Single Hole Mounting.
Small Size; 1 7/16" x 1 13/32" per general outline dimensions for differential "Trim-Airs" as shown on Page 6 of Catalog No. 46.

These condensers are made to fit all standard Cardwell "Trim-Air" hardware.

Note maximum and minimum capacity values shown are measured from stator-to-stator and are effective values as used when a coil is connected stator-to-stator, with rotor floating.

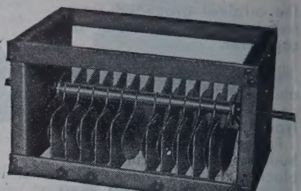
TYPE "P" LIGHT HEAVY WEIGHT TRANSMITTING CAPACITORS



PK-125-QD
Special

Designed to accommodate capacitance values up to 150 mmfd. per section in a dual section type having an airgap of .500", the "P" type construction permits higher capacity for a given airgap, and therefore a shorter frame than the "T" type construction. Typical Cardwell sturdiness is built-in, and the "P" type is probably the lightest transmitting condenser built for its size, yet completely satisfactory for heavyweight use. No single section types are catalogued; parallel or series connect for double or half single section capacity listed in table.

GENERAL SPECIFICATIONS:

FRAME: End plates are ⅛" thick formed aluminum, satin finish.
SHAFT: ⅜" diameter, non-magnetic stainless steel, extended both front and rear end.
PLATES: .064" thick, rounded and buffed edges. Rotor plates are 6¾" in diameter.
BEARINGS: Heavy nickel plated brass front and rear shoulder bearings.
ROTOR CONNECTION: Heavy, two finger N.P. phosphor bronze wiper bears on ⅛" thick N.P. brass contact ring, at each end.
STATOR CONSTRUCTION: Plates permanently staked into slotted, rounded edge aluminum stator blocks.
INSULATION: Mycalex (glass bonded mica).
MOUNTING: 3 clearance holes for No. 10 screws in each *side* of each end plate permitting mounting on any side, as well as provision for mounting associated components such as inductance coil mountings, etc.

"HQ-129-X" AMATEUR RECEIVER

The Hammarlund "HQ-129-X" amateur communications receiver is designed to meet the demands of the most critical amateurs. Its design includes every feature essential to finest performance.

The "HQ-129-X" has a continuous range from .54 to 31 megacycles in six separately calibrated bands with continuous bandspread throughout the entire range. In addition, the bandspread dial is calibrated for each of the four most important amateur bands—3.5 - 4 mc, 7 - 7.3 mc, 14 - 14.4 mc and 28 - 30 mc.

The "HQ-129-X" has the Hammarlund patented variable wide-band crystal filter which works exceptionally well on phone or short wave broadcast signals.

There are many other features: Variable antenna compensator, beat oscillator, voltage regulator, series noise limiter, send-receive switch, automatic volume control, calibrated "S" meter, audio gain control, sensitivity control—plus all that goes into a receiver built by engineers who have spent a lifetime designing commercial communication equipment.

The "HQ-129-X" is available complete in a two-tone gray finish including tubes and a 10 inch P. M. dynamic speaker.

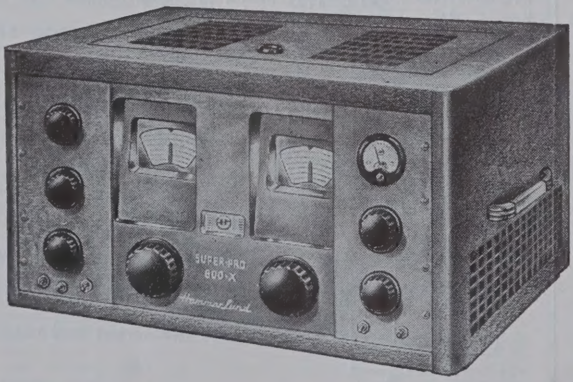
SERIES 600 "SUPER-PRO"



Technical Information will be Available Late Fall of 1949

DESCRIPTION

Cheers from the experts — The new Series 600 SUPER-PRO is the finest communications receiver that money can buy. No "warmed over" model, the Series 600 is entirely new in electrical concept and mechanical design—truly "years ahead" of present day receivers. When you check this entirely new SUPER-PRO for such things as image rejection, stability, calibration accuracy, etc. . . . you will find performance that you would not have thought possible. You'll find that "years ahead" in design mean "years ahead" in performance.

Band changing in the new SUPER-PRO is accomplished by means of an ingeniously designed rotary turret which places the coil assemblies of the two R.R., Mixer and Oscillator stages directly adjacent to their respective sections of the four gang tuning condenser where they are electrically most efficient.

By means of the mechanical system used in the SUPER-PRO 600-X both the main and band spread dials are tuned simultaneously with one control and the need for first setting the main dial is eliminated. The dial drive mechanism is entirely gear coupled to the main tuning condenser, producing the kind of calibration accuracy usually associated only with costly laboratory standards.

"RMC" CAPACITOR

The new "RMC", Rugged Midget Capacitor, is particularly designed for use in applications where strength and solid construction is as important as sound electrical design.

Two low loss silicone treated ceramic insulated bars are used to support the stator. Bearings are hand-fitted sleeve in the front and single ball thrust in the rear—torque is smooth and uniform. Contact to the rotor is made through a silver-plated beryllium forked spring bearing on a wide disk on the rotor shaft.

"VU" UHF CAPACITOR

The capacitors listed below are available for use by manufacturers, engineers and amateurs for all types of communications equipment having tuned circuits operating as high as 500 mc. The many advantages of these new capacitors are of course due to the silent electrical operation made possible through the use of pyrex glass ball bearings. Elimination of the rotor contact further precludes the possibility of noise. Two sets of contacts are provided, so that the vacuum tube can be mounted on one side and the inductor on the other side of the capacitor. Voltage rating—700 V.

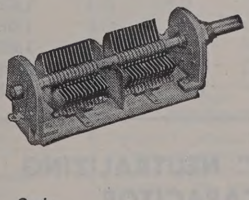
"HFD" MICRO DUAL CAPACITORS



A compact dual—ideal as a high frequency tuning capacitor, for tuning and neutralizing low-powered short wave and for very high frequency transmitters, etc. Heavy Isolantite base. Equipped with new outstanding Hammarlund split rear bearing and individual noiseless wiping contact for each section.
